Some Concepts and Definitions

What is census?

Population census is the total process of collecting, compiling, analyzing or otherwise disseminating demographic, economic and social data pertaining, at a specific time, to all persons in a country or a well defined part of a country. As such, the census provides a snapshot of the country's population and housing at a given point of time.

Out Growth (OG): Out Growth should be a viable unit such as a village or part of a village contiguous to a statutory town and possess the urban features in terms of infrastructure and amenities such as pucca roads, electricity, taps, drainage system, education institutions, post offices, medical facilities, banks, etc.

Urban Agglomeration (UA) : It is a continuous urban spread constituting a town and its adjoining urban outgrowths (OGs) or two more physically contiguous towns together and any adjoining urban out- growths of such towns. Examples of OGs are Railway colonies, University campuses, Port areas, that may come up near a city or statutory towns outside its statutory limits but within the revenue limit of a village or villages contiguous to the town or city.

Literate : A person aged 7 and above who can both read and write with understanding in any language is treated as literate.

Illiterate : A person, who can neither read nor write or can only read but can't write in any language, is treated as illiterate. All children of age 6 years or less, even if going to school and have picked up reading and writing are treated as illiterate.

Sex-ratio : It is expressed as ' number of females per thousand males' and this is the basic attribute for meaningful demographic analysis of the human population.

Child Sex-ratio (0-6 years) : Child Sex-ratio (0-6 years) is the number of females in the age group 0-6 years per thousand males of the same age group in the same population.
