### STATE PUBLICATIONS

DISTRICT CENSUS HAND BOOKS

District Census Hand-books for each of the 43 Districts in Madhya Pradesh

# PREFACE

The publication of District Census Hand-books, which was begun in the 1951 Census, represents a significant step in the process of making census statistics available for the smaller territorial units basic to executive and developmental administration. Apart from the fact that the proper implementation of policy depends on the ability of the administrative authorities concerned to quantify accurately the variables involved, it is at these levels that policies get really thoroughly tested; also, policies can fail—and probably have failed—because their statistical basis was weak. It is undoubtedly necessary that gaps in statistics at lower levels be filled as rapidly as possible. It was not possible at this Census to base all census statistics on the development block as the unit mainly because in 1961 there were many areas not till then covered by blocks. The coverage had become complete by about the middle of 1963 and it is not unlikely that the 1971 Census will recognise the block as the basic field unit as much for purposes of presentation as for operational purposes.

2. What we have tried to do in the 1961 Census Hand-books is to make them more informative by the inclusion of as many categories of non-census statistics as possible; some of these are climate, agriculture, co-operation, industry, banking, education, health etc. There is also an introductory note to each Hand-book high-lighting the more striking features. It has not been possible for the Census Organisation to check the accuracy of the figures supplied by various authorities; it is to be hoped that some other organisation, better equipped for the purpose, will take up this task.

3. For the seventeen districts of Mahakoshal (Part of erstwhile Madhya Pradesh) and for Panna and Tikamgarh districts of erstwhile Vindhya Pradesh, which are part of the present State of Madhya Pradesh, the area figures for districts and tahsils furnished by the Director of Land Records and presented in Table A-I are internally inconsistent in the sense that the tahsil areas do not add up to the district area. This inconsistency arose from the fact that, in the case of these districts, the district area includes, but the tahsil areas exclude, 'forest' area for which the tahsilwise breakup was not then available. Later on, while this Hand-book was in the press, the Director of Land Records brought out revised area figures for the year 1962-63 for tahsils and districts, which among other improvements, do not suffer from the defect of internal

inconsistency even in case of these nineteen districts. Revision of Table A-I on the basis of these area figures was not feasible at this late stage; the only alternative was to print these revised area figures also in this Hand-book.

4. One unfortunate fact about these Hand-books is that they became available to the users rather late in the decade. This is partly due to the considerable time required for the collection of information from various authorities and partly to difficulties in printing. Owing to the fact that State presses, with a heavy back-log of printing weighing down on them, would find it impossible to print all the District Census Hand-books themselves, arrangements have been made for printing them in private presses. If these Hand-books are to have a useful life of more than four or five years of inter-censal decennium, more expeditious methods for the collection of non-census statistics, for the preparation and checking of the manuscripts and for printing will have to be devised.

5. The Census Organisation is grateful to the Government of Madhya Pradesh for having been so kind as to undertake the publication of these Hand-books and to the Superintendent, Government Printing and his organisation—particularly the Assistant Superintendent, Printing, Government Regional Press, Indore and his staff—for the printing arrangements made. The inspiration behind this ambitious venture is that of our indefatigable Registrar General, Shri Asok Mitra, to whom we are all deeply grateful. Our thanks are also due to the various authorities who supplied us with all the necessary statistics.

G. JAGATHPATHI

# NOTES AND EXPLANATIONS

This note gives the meanings and explanations of terms and concepts used in this Handbook. This is necessary because, without a proper grasp of the meanings of such simple concepts as building, house, household, worker, etc., it is not possible to appreciate the data presented in the Handbook. Thus, one who does not know that an unpretentious hut in the thick of Bastar forests with unplastered bamboo walls and a thatch roof and with space hardly enough for two cots is not a whit less of a building than the Indian versions of the skyscrapers in one of the metropolitan cities, or that a central jail housing all manner of criminals and shady characters is as much a household as the household of the most pious and god-fearing citizen in the State, may not be able to appreciate what exactly the figures represent. Besides explaining the terms and concepts, the note also contains brief notes on the salient and peculiar features of some of the Census tables presented in this Handbook.

*Census.*—The Census in India is a decennial operation taking place in February-March of the first year of every decade. It ensures coverage of *all* members of the population irrespective of age. The operations constituting a *Census* involve, besides counting of heads, the counting of numerous attributes of the person counted. These are demographic, social, economic and cultural in nature. The number of these attributes regarding which information is recorded has been increasing from census to census and is limited only by considerations of cost, time and organisation.

*Population.*—The important thing about a population is that it is dynamic. It is a constantly changing entity. These changes take place by the natural processes of birth and death as well as by migration. A statement of population has therefore little sense unless the point of time to which it relates is also stated. A population figure is correct only for a particular point of time; and, even though in practice one may omit to indicate this point of time, one should none the less be clear about it. The *population figures presented herein refer to the* sunrise of 1st March, 1961, unless otherwise stated.

*Rural-Urban Classification.*—Data collected at a Census is usually presented separately for the rural and urban areas. A 'town' or a 'town-group' constitutes an urban area. A 'town' in the 1961 Census was either (i) a municipality, cantonment or corporation; or (ii) a habitation with a population at least of 5,000 with atleast *three-fourths of the adult male population being* engaged in non-agricultural pursuits. The rural-urban classification, being operationally cardinal and prior in point of time to the census count, had to be tackled earlier and a list of 219 towns in the State was therefore, prepared much earlier than the census proper. This included 28 habitations which were tentatively treated as towns, the intention being that, after the 1961 Census data became available, their cases would be re-examined. Later on, however, no modification was made in the list, even though 7 towns did not satisfy either the minimum population criterion or the one based on the ratio of non-agricultural adult males being 75% or greater. These are Gogaon in West Nimar, Datla Bandhi in Chhindwara (both under 5,000 in population); and, Icchawar, Patan, Pendra, Akaltara, Arang respectively in Sehore, Jabalpur, Bilaspur, Bilaspur, and Raipur Districts (not satisfying the economic criterion). The reason for not disturbing the original list of towns was that as many as 14 habitations which did not satisfy one or the other of the criteria laid down earlier managed to sneak into the list of towns as municipalities, and inclusion of seven more such towns was not supposed to introduce greater demographic distortion than was already present. The cases of Chachaura-Binaganj town in Guna District and Sardarpur-Rajgarh in Dhar District are peculiar in that each of these two municipal towns consists of two distinct habitations separated by 2 miles in the first and 3 miles in the second case.

All areas, which were not urban were rural. They consisted of 'villages'. A very large majority of the census villages were 'revenue villages', which had well demarcated or recognised boundaries, and which included not only the inhabited portion (or portions) but also agricultural land and uninhabited waste (or other) lands. The census village was thus not synonymous with a habitation or a dwelling; in fact, a village could contain two or more distinct habitations separated by considerable distances *known variously as 'tola' or 'mazra' or 'para'.* Besides, in many districts there were forest villages, situated inside Reserved forests and without clearly demarcated boundaries. The areas entered against these villages in the Village Directory are thus only approximate. It is to be noted that being, as observed by Martin [Census Superintendent (old) Madhya Pradesh. 1911 and Census Commissioner for India, 1921,] arbitrary and irregular units of

area, carved out chiefly for revenue and administrative purposes, there are many revenue villages which do not have any habitation. They are not, therefore, of much demographic interest, and their inclusion in the Village Directory is only for a proper tally of area aggregates.

**A – General Population Tables:**

There are four main tables and three appendices in this series.

*Table A-1.*—This table presents the basic figures relating to area, houses and population separately for the rural and urban areas of each district, each tahsil, and for each city, towngroup or town. The area figures used in the table for the district and the tahsils are those furnished by the State Director of Land Records. In case of the district, the area figures furnished in 1962 by the Surveyor-General, India are also given. The Surveyor-General does not furnish area figures for tahsils. In case of cities and towns the area figures are furnished by the local urban authority (if any) in charge of the municipal administration, or by the local revenue authorities. Except in case of Raipur and Sagar districts, there is no agreement between the area figures for the district furnished by the Director of Land Records and the Surveyor-General, India. These differences arise principally from the differences in the methods adopted by the two agencies in measuring and computing the area.

In the case of eighteen districts (Bastar, Raipur, Durg, Raigarh, Bilaspur, Surguja, Balaghat, Seoni, Chhindwara, Mandla, Narsimhapur, Jabalpur, Sagar, Hoshangabad, Betul, East Nimar, Tikamgarh and Panna), only the district 'total' and 'rural' figures for area include the forest area; the figures for forest area were not available for individual tahsils in these districts, and hence the tahsilwise area figures for these districts do not include forest area. This fact is important particularly for appreciating the district and tahsil population density figures of these districts. The population density (*i.e.* persons per square mile) given in column 4 of the table is calculated on the basis of the figures of area supplied by the State Directorate of Land Records.

*Occupied Residential House.*—This is a Census house which was actually occupied at the time of enumeration for residential purposes either partly or fully. The concept of 'Census house' together with the allied concepts of 'building' and 'household' are dealt with later in this note.

*Town Group.*—The introduction of the concept of "towngroup" is a new feature of the 1961 Census. One kind of 'towngroup' has its basis in what may be called demographic prognosis, this being that a particular group of towns is situated in such a way, and exhibits some interconnecting features of such a kind, that they can be considered a single demographic entity whose organic nature is likely to become more and more evident in the future. Examples are: Bhopal City with Bairagarh in the West and Heavy Electricals Township in the East; and Durg Town and Bhilai Industrial Township. The other type of towngroup is a group only in name in the sense that it represents a group of localities which geography units but definition separates. Examples are Sagar Towngroup consisting of Sagar Municipality and Sagar Cantt., and Jabalpur Towngroup (consisting of Jabalpur Corporation, Jabalpur Cantt. and Khamaria). In both these instances, the urban complex is single and continuous, but as each corporation, or cantonment is a separate town by definition, it gets split up in the Census into more than one town. In Madhya Pradesh there are six towngroups in all; three of them belong to the first type: Bhopal in Sehore District: Murwara in Jabalpur District and Durg in Durg District; the other three belong to the second type, Pachmarhi in Hoshangabad District, Sagar in Sagar District and Jabalpur in Jabalpur District.

*Houseless & Institutional Population*:—"Houseless population" means those who did not live and were not enumerated, in Census-houses at the last Census. Obviously these swell the ranks of the social destitutes who, to speak in every day parlance do not have even a roof over their heads, but live under the shade of trees or bridges or on pavements. "Institutional population" means the population that was enumerated in institutions at the last census *i.e.*, in hostels, jails, boarding houses, hospitals etc.

*Class of Towns.*—Towns are classified into six classes as below according to their population sizes:—

| *Class* | *Population range* |
|---|---|
| I | 100,000 and above |
| II | 50,000—99,999 |
| III | 20,000—49,999 |
| IV | 10,000—19,999 |
| V | 5,000—9,999 |
| VI | Below 5,000 |

Towns of Class I are also known as Cities.

"Status" of a town means the authority in charge of its local urban administration. Thus a town could have a Municipal Corporation; a Municipality, a Cantonment Board, a Gram Panchayat, a Town or Notified Area Committee, etc.

B—(i) *General Economic Tables.*—This series includes 22 tables containing information on certain economic aspects of the population. The concepts involved have undergone significant changes as compared with the 1951 and earlier Censuses. In the 1951 and earlier censuses or at any rate in the last few censuses income or economic independence (and dependance) were treated as the criteria for denoting the economic status of a person. Separate account used to be taken of all persons who were economically independent and of those who were economically dependent. An intermediate category of economic semi-independence was also introduced in the 1931 Census. This consisted of the 'earning dependents' of the 1951 Census and even there the element of income was present. This income-based classification seems to have not infrequently resulted in a suppression of information relating to those who worked in household economic activities but did not actually earn any income like men other than the head of the household and women of the family or children working at the family cultivation or cottage industry but not earning any incomes. The 1961 Census introduced the concept of work and totally abandoned the 'income' approach. Thus all people who worked (*i.e.*, were "economically active") including family workers who were not in receipt of any income, & working children who did not earn enough for their maintenance were treated as workers. On the other hand such persons as a receiver of rents on immovable property, or of interest on securities deposited in a bank, and doing no other work, were treated as non-workers. Persons professionally engaged in anti-social activities (*i.e.*, thieves, robbers, prostitutes, beggars, etc.) were, however, not treated as workers. The approach to the concept of "work" was pragmatic and numerous illustrations were given to clarify the concept. The basis of work was held to be satisfied in the case of seasonal work *i.e.*, work at cultivation, livestock, dairying or household industry if the person has had some regular work of more than one hour a day throughout the greater part of the working season. In the case of regular employment in any trade, profession, service, business or commerce the basis of work was satisfied if the person was employed during any of the fifteen days preceding the day on which he was visited by the Census enumerator. A person who was working but was absent from his work during those fifteen days or for a longer period owing to illness or other causes was treated as worker. Work included not only actual physical work but also effective supervision and direction of work.

*The Working Categories*:—The primary classification of the population is by means of a simple dichotomy into workers and non-workers. The former is further sub-divided into nine sub-classes or working categories of the Census. These are listed below; the correspondence with the Standard National Industrial Classification is also indicated.

| | CENSUS WORKING CATEGORY | CORRESPONDING DIVISION OR MAJOR GROUP OR MINOR GROUP OF NIC |
|---|---|---|
| I | Workers in cultivation | Minor Groups 000, 001, 002, 003, 004 |
| II | Agricultural Labourers | The same as in I above |
| III | Workers in mining, quarrying, livestock, forestry, fishing, hunting and plantations, orchards and allied activities. | Major Groups 01, 02, 03 and 04 and Division 1; Minor Groups 005, 006, 007, 008, 009 (if not classifiable as household industry) |
| IV | Workers in household industry | Minor Groups 005 to 009, 013, 014, 015, 020 to 026, 031, 032, 040 to 048, 107, Divisions 2 & 3 (expecting Minor Groups 201, 217, 218, 232, 252, 260, 290, 324, 325, 338 and 380) if on a household scale |
| V | Workers in manufacturing other than household industry | Divisions 2 & 3 |
| VI | Workers in construction .. | Division 4 |
| VII | Workers in Trade and Commerce .. | Division 6 |
| VIII | Workers in Transport Storage and Communications .. | Division 7 |
| IX | Workers in other services .. | Divisions 5, 8 & 9 |

The only term requiring explanation is household industry, the others being self-explanatory. As regards household industry, a three-fold test was laid down, *viz*:—

(a) "Household Industry" should consist of manufacture, processing or servicing and may include sale but should not be confined simply to buying and selling. At least part of the goods offered for sale from the household should be manufactured or processed by members of the household.

(b) "Household Industry" should be on the household scale where the workers mainly will be the Head of the household himself and/or members of the household, the role of hired workers from outside being of secondary importance. Thus, in any Household Industry, members of the household should be in a position to lend a hand in the industry whenever they find the time in the course of their daily chores. Household Industry cannot, therefore, be on the scale of a *registered factory* but can use machinery and employ power like steam engine or oil engine or electricity to drive the machinery.

(c) Location also is important, for proximity decides participation by members of the household. In a village this participation is possible if the Household Industry is located at home or within the village because village organisation is such as makes it possible for members of the household to move about freely in the village to look after their work. In urban areas such free movement is not possible, and therefore, for household industry in urban areas we should consider only those industries which are located or at least the major part of whose work is located at home.

*Class of Worker.*—A worker, other than a cultivator, agricultural labourer or a worker at household industry could be: (i) an Employer, that is, who hires one or more persons in his work; (ii) an Employee, that is, who does his work under others for wages or salary in cash or kind; (iii) a Single Worker, that is, who is doing his work without employing others, except casually, and without the help of other members of the family, except casually (this includes workers working as members of a co-operative); and (iv) a Family Worker, that is, who is doing his work in his own family without wages or salary in cash or kind. A person could be an employee in a household industry also.

PRINCIPAL AND SECONDARY WORKER:

Table B-VII Part A and Part B involve the concepts of principal and secondary work. For every worker the principal work had to be indicated in the case of a person who was engaged in more than one work, and also the secondary work if he was engaged in two or more than two *productive activities. The concepts of* primary and secondary work had nothing to do with the income accruing to a person from his work. The principal work of a person was that activity which took up most of his time; similarly the secondary work (in case a person was engaged in two or more than two kinds of work) was that which took up less time than the principal work but greater than the other kinds of work. Unless specifically stated to the contrary in the table heading itself the tables in the Handbook are based on the principal work of a person.

*Non-workers.*—The non-working section of the population also was divided into eight classes according to the nature of their activities. Thus a non-worker could be (i) a full time student or child attending school, (ii) a person engaged in home duties (like a housewife or other adult female who does no other work), (iii) dependent including an infant or child not attending school, a person permanently disabled from work because of illness or old-age; (iv) a retired person who is not employed again, rentier, a person living on agricultural or non-agricultural royalty, rent or dividend, or any other person of independent means for securing which he does not have to work and who does no other work; (v) a beggar, vagrant or independent woman without indication of source of income and others of unspecified source of extistence; (vi) a convict (not an undertrial who was to be recorded for the work he did before being admitted to Jail); (vii) persons who were seeking employment for the first time; and (viii) persons who previously had worked, but were out of employment, and were again seeking work.

*Education Levels.*—A person was treated as illiterate if he did not satisfy the test of literacy, this meaning the ability both of reading and writing. The test of reading was held to be satisfied if a person could read printed matter or easily legible manuscripts. The test of writing was the ability to write a simple letter. The minimum educational level is primary or *junior basic, and this includes all persons who* have passed this examination but have not passed the next higher level examination *i.e.*, matriculation or higher secondary. Persons who had formal schooling but had not passed the primary or junior basic level examination were literates without any educational levels. A person belonging to any particular educational level means a person who has passed the examination denoting that level.

INDUSTRIAL AND OCCUPATIONAL CLASSIFICATION OF WORKERS:

Workers have also been classified according to their occupation and industry. The concepts of 'industry' and 'occupation' are of fundamental importance in connection with all economic activity and it is necessary that they should not be confused with each other. By "industry" is meant the sector of economic activity in which a worker is engaged *e.g.*, the textile industry; mining industry, etc., whereas by 'occupation' is meant the exact function that a worker performs in that sector *e.g.*, fitter, carpenter, typist, etc. Occupation thus is "a trade, profession or type of work performed by an individual independent of the worker's industry, status or years of experience".

THE INDIAN STANDARD INDUSTRIAL CLASSIFICATION (I. S. I. C.):

The industrial classification used in some of the economic tables of this hand-book is the 'Standard Industrial Classification' prepared by the Ministry of Labour and Employment, Government of India. Under this scheme of classification, the whole range of economic activity is divided into nine 'divisions', and a code number is given to each. The first digit of the code number of any specific economic activity stands for the 'Division' under which that activity is classified. Each division is then divided into a number of major groups not exceeding ten. The first and second digits of the code number represent the division and the major group into which an economic activity is classified. Each major group is again sub-divided into a number of minor-groups not exceeding ten, and the first, second and third digits in the code number of any economic activity represent the division, the major group and the minor group into which it is classified. To illustrate, the industrial 'code', '261' represents an economic activity corresponding to minor group 261 in major-group 26 of Division 2. A reference to the Standard Industrial Classification will show that the minor group code stands for the economic activity 'Dying and bleaching of silk' in the major group 'Textiles Silk' of the Division: 'Manufacturing'. The 'Divisions', 'Major Groups' and 'Minor Groups' of the Standard Industrial Classification are printed immediately after this note as Appendix I.

NATIONAL CLASSIFICATION OF OCCUPATIONS (NCO):

Table B-V gives the occupational classification by sex of persons at work other than cultivation. This classification is based on the 'National Classification of Occupations' prepared by the Ministry of Labour and Employment, Government of India. Each *occupation* is represented by a code number containing a number of digits (extending in the NCO upto 5). We have used only the three digit code number for classifying occupation. All occupations are divided into ten divisions to each of which a digit is allotted. The first digit of the code number of an occupation stands for the 'Division' into which it is classified. Each division is then sub-divided into a number of groups not exceeding ten. The first and second digits of the code number represent the 'Division' and 'Group' into which an occupation is classified. Each group again is divided into a number of families not exceeding ten and the first three digits of the code number stand for the division, group and family into which an occupation is classified. To illustrate, the code number 911 stands for the family 911 (Cooks, cook-bearers, domestic and institutional) included in the Group 91 (Housekeepers, Cooks, Maid and related workers) included in the 'Division' 9 (Service, Sport and Recreation workers). The Divisions, Groups, and Families of the National Classification of Occupations are printed after this note as Appendix II.

It may be mentioned that the three digit industrial code can easily be extended into a four-digit code on the principles illustrated earlier to secure greater precision in the classification of the economic activity of a worker. This has in fact been done in case of workers at household industry, and these four-digit code numbers have been used in Table B XIV Part B.

B—(ii) *Household Economic Tables.*—Tables belonging to this series differ from other in two respects: (i) they have been prepared from information recorded on the household schedules, while the other tables are prepared from information recorded on the individual slips; (ii) whereas the other tables are based on the total population, the tables in the series are prepared from the data contained in a 20% sample of all households. The instructions for selecting the sample are reproduced below:—

"Every fifth household from the starting random household will be selected to make a 20% sample. The sample household will be marked continuously for rural areas of a tahsil/taluka and for urban areas of a district *i.e.*, households left over in a household pad should be carried over to the next household schedule pad for the selection of sample households.

"Before making the sample households the household schedule pads should be arranged in the order of location code numbers of villages in a taluka or tahsil in the case of a rural area and in the order of location code numbers of towns in a district for urban areas. The first sample household should be chosen randomly among the first five households in the first household schedule pad and stamped (s) as selected. This random number (random start) should be chosen separately for rural areas of each taluka/tahsil and for

the urban area of the district. From the first random household every fifth household should be continuously stamped as selected..... The sample should be continuously marked for all the pads of villages in a tahsil and urban areas in a district. If in a particular household schedule pad at the end, some households (these will be four or less) are left after marking of the sample household, the households left over should be carried over to the next household schedule pad and the appropriate household in that pad should be marked as a sample household".

**C.—Social and Cultural Tables:**

This series contains 8 tables of which Table C-1 is prepared from data abstracted from the 20% sample households.

*Marital Status.*—As regards marital status a person could be (i) never married, (ii) married, (iii) widowed and (iv) divorced or separated. The figures given do not necessarily indicate the legal position. Thus, persons who lived together as man and wife and who were regarded as such by society were treated as 'married' even though there might not be any legally valid marriage between them.

*Age.*—The age of a person was recorded in completed years as on the last birth day at the time of enumeration, so that a child who had not completed a year of its existence was recorded as of age '0'. Inspite of the best efforts, distortion of ages is common phenomenon in Indian Census. This distortion is ascribable to the combined effect of a variety of causes like, for example, digit-preference, age-bias and estimation error and its most obvious manifestation is the heaping of the ages at digits ending in 0 or 5 and in even rather than in odd numbers.

*Mother Tongue.*—Mother tongue is the language spoken in childhood by a person's mother to the person, or mainly spoken in the household.

*Religion.*—Separate figures are given only for the six main religions:Hindu, Muslim, Jain, Sikh, Christian and Buddhist. Figures for persons professing other religions have been clubbed together under the head : Other Religions and persuasions.

*Scheduled Castes and Scheduled Tribes.*—In view of the constitutional safeguards guaranteed to persons belonging to scheduled castes and scheduled tribes with a view to ameliorate their social and economic condition, basic census figures are for the first time being published separately for each scheduled caste and scheduled tribe. A scheduled caste or a scheduled tribe means a caste or a tribe included in the Order issued by the President of India under Articles 341 (1) and 342 (1) of the Constitution, amended, if necessary in accordance with Articles 341 (2) and 342 (2) thereof. It should be remembered that the population of a particular scheduled caste or tribe as given in the tables does not necessarily mean the entire population of that caste or tribe in the district. This is so because scheduling of a caste or tribe under the Constitution is *territorial* so that a caste or a tribe scheduled in a district, (or a tahsil or tahsils of a district) is not necessarily a scheduled caste in other districts (or other tahsils of the same district). Thus Gond is a scheduled tribe in all tahsils of Jabalpur District except Jabalpur Tahsil so that the figures for Gond population in Jabalpur District exclude the Gonds of Jabalpur Tahsil. Secondly, some of the scheduled tribes have not been given independent status in some parts of the State by the Order but have been clubbed together with some major tribe, while, in other parts of the State, they have not been so clubbed but have been included as distinct scheduled tribes. Thus, in the districts of the Mahakoshal region of the State, the tribe Agaria has been clubbed, along with many another, with Gond as the latter's sub-tribe. In these districts, therefore, figures relating to Agaria tribe, whose ethnic identity with Gond is controversial, do not appear independently in the tables of these districts, but are inculded in the figures for Gond. In the Vindhya Pradesh region, however, Agaria is Scheduled tribe in its own right and in the districts belonging to that region Agaria population appears separately in the relevant tables.

*Religion of Scheduled Castes and Tribes.*—A scheduled caste can exist only in Hindu and Sikh religions and in no other religion. A scheduled tribe, however, may be found in any religion.

*E—Housing Tables.*—The Handbook includes five tables on housing. In usting these tables, it should be remembered that they are prepared from the data on households abstracted from the 'Houselists'. Tables E-I and E-III are based on the full count while table E-II, E-IV and E-V are prepared from a 20% sample of households entered in the Houselists. Houselisting was non-synchronous with census proper, having taken place in the month of September-October, 1960, about five month before the reference date of the Census. Also, the population of households entered in the houselists is not necessarily identical with the population of households in respect of which household schedules were filled at the time of the Census. Thus the samples of households drawn from the household schedule, and from the houselists are different samples.

The instruction for drawing the 20% sample of households from the houselists are reproduced below:—

"Before marking the sample households the Houselists should be arranged in order of location code numbers in the case of rural areas for tahsil etc., and in the case of urban areas other than towns with population of 50,000 and over. In the case of towns with population of 50,000 and over the Houselists should be arranged in order of blocks. The first sample household should be chosen randomly among the first five households in the first Houselist. From that every fifth household from the first random household should be continuously marked..... The sample should be marked continuously for all the Houselists. If in a particular Houselist at the end two households are left after the marking of the sample households then these households should be carried over to the next Houselist and the third household in that list should be marked as sample households".

*Census House and Census Households.*—The concepts of "building", "house" and "household" are important and differ somewhat from their connotations in common speech. A building refers to the entire structure on the ground. A census house is a structure or part of structure inhabited or vacant or a dwelling, a shop, a shop-*cum*-dwelling or place of business, workshop, school etc., with a separate entrance. A census house was thus a building, or part of a building with a separate entrance. A census house could have a variety of uses, residential as well as non-residential; or it might be vacant (at the time of houselisting).

A household was defined as "a group of persons who commonly live together and would take their meals from a common kitchen unless the exigencies of work prevented any of them from doing so." A household necessarily lived in a census house or part of a census house. The definition of a household was broad enough to include all persons living together in a census-house and dining from the same kitchen, even if they were not related to one another. Such were the institutional households, like jails, hostels, hospitals etc. The house in which a household lived could either be owned or rented. All census houses which were not owned by the households living in them were treated as 'rented' even though no rent was being actually paid.

*"Factory" and "Workshop"*:—As is clear from its definition, a Census house could be a workshop. A workshop is a place where some kind of production, repair or servicing goes on, or where goods or articles are made and sold. A bigger workshop which was either registered under the Indian Factories Act or was of the scale of a registered factory was returned as a factory. For a manufacturing, repairing or servicing establishment to be registered under the Indian Factories Act, it should have ten or more workers if using power and twenty or more workers if not using power.

VILLAGE DIRECTORY AND ITS APPENDICES:

*Village Directory*.—The Village Directory corresponds to the Primary Census Abstract of the 1951 Census. It gives for each village of the district: (a) information relating to area, census houses, households, scheduled castes and scheduled tribes and literacy; and (b) the classification of the population into workers and non-workers, and again 'workers' into their 'Industrial Categories' separately for both the sexes. For facilitating comparison with the Census Handbook of 1951 the serial number at which the village is to be found in 1951 Handbook is also given. A new feature introduced in this Census is the presentation of additional information about each village relating to schools, hospitals, child and maternity welfare centres, medical practioners, electricity, post and telegraph offices etc. This has been done by entering symbols against the name of each village. Another novel feature is the presentation in eleven appendices of useful information relating to villages and towns *i.e.*, industrial establishments, places situated on bus routes, or within five miles of a railway station, places having pucca wells, markets, public reading rooms, drains etc.

To enable the reader to locate the village in the Village Directory without much difficulty, an alphabetical index of village names is given. This gives for each village the 1961 location code number of the village (in the Village Directory, villages are arranged according to their Location Code Numbers); and its location code number in the 1951 Hand book.

APPENDIX—I

# STANDARD INDUSTRIAL CLASSIFICATION

**This classification groups the industries into**

9 Divisions

45 Major Groups

343 Minor Groups

The divisions, major groups and minor groups with their Code numbers are listed below.

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| | *Division O—Agriculture, Livestock, Forestry, Fishing and Hunting.* | |
| 00 | Field Produce and Plantation Crops:— | |
| | Production of cereal crops (including Bengal gram) such as rice, wheat, jowar, bajra, maize. | 000 |
| | Production of pulses such as arhar, moong, masur, urd, khesari, other gram | 001 |
| | Production of raw jute and kindred fibre crops | 002 |
| | Production of raw cotton and kindred fibre crops | 003 |
| | Production of oilseeds, sugarcane and other cash crops | 004 |
| | Production of other crops (including vegetables) not covered above | 005 |
| | Production of fruits and nuts in plantation, vines & orchards | 006 |
| | Production of wood, bamboo, cane reeds, thatching grass etc. | 007 |
| | Production of juice by tapping plams | 008 |
| | Production of other agricultural produce (including fruits and nuts not covered by code number 006 & flowers) not covered above | 009 |
| 01 | Plantation Crops:— | |
| | Production of tea in plantation | 010 |
| | Production of coffee in plantation | 011 |
| | Production of rubber in plantation | 012 |
| | Production of tobacco in plantation | 013 |
| | Production of ganja, cinchona, opium | 014 |
| | Production of other plantation crops not covered above | 015 |
| 02 | Forestry and Logging:— | |
| | Planting, replanting and conservation of forests | 020 |
| | Felling and cutting of trees and transportation of logs | 021 |
| | Preparation of timber | 022 |
| | Production of fuel including charcoal by exploitation of forest | 023 |
| | Production of fodder by exploitation of forests | 024 |
| | Production of gums, resins, lac, barks, herbs, wild fruits and leaves by the exploitation of forests | 025 |
| | Production and gathering of other forest products not covered above | 026 |
| 03 | Fishing:— | |
| | Production of fish by fishing in sea | 030 |
| | Production of fish by fishing in inland waters including the operation of fish farms and fish hatcheries | 031 |
| | Production of pearls conch, shells, sponges by gathering or lifting from sea, river, pond | 032 |
| 04 | Livestock and Hunting:— | |
| | Production and rearing of livestock (large heads only) mainly for milk and animal power such as cow, buffalo, goat | 040 |
| | Rearing of sheep and production of wool | 041 |
| | Rearing and production of other animals (mainly for slaughter) such as pig | 042 |
| | Production of ducks, hens and other small birds, eggs by rearing and poultry farming | 043 |
| | Rearing of bees for the production of honey, wax, and collection of honey | 044 |
| | Rearing of silk worms and production of cocoons and raw silk | 045 |
| | Rearing of other small animals and insects | 046 |
| | Trapping of animals or games propagation | 047 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| | Production of other animal husbandry products such as skin, bone, ivory & teeth | 048 |
| | *Division 1—Mining and Quarrying*:— | |
| 10 | Mining and Quarrying:— | |
| | Mining of coal | 100 |
| | Mining of iron ores | 101 |
| | Mining of gold and silver ores | 102 |
| | Mining of manganese | 103 |
| | Mining of mica | 104 |
| | Mining of other non-ferrous metallic ores | 105 |
| | Mining of crude petroleum and natural gas | 106 |
| | Quarrying of stone (including slate), clay, sand, gravel, limestone | 107 |
| | Mining of chemical earth such as soda ash | 108 |
| | Mining and Quarrying of non-metallic products not classified above such as precious and semi-precious stones, asbestos, gypsum, sulphur, asphalt | 109 |
| | *Division 2 & 3—Manufacturing*:— | |
| 20 | Food stuffs:— | |
| | Production of rice, atta, flour, etc. by milling, Dehusking and processing of crops and foodgrains | 200 |
| | Production of sugar and syrup from sugarcane in mills | 201 |
| | Production of indigenous sugar, gur, from sugarcane or palm juice and production of candy | 202 |
| | Production of fruit products such as jam, jelly, sauce and canning and preservation of fruits | 203 |
| | Slaughtering, preservation of meat and fish and canning of fish | 204 |
| | Production of bread, biscuits, cake and other bakery products | 205 |
| | Production of butter, ghee, cheese and other dairy products | 206 |
| | Production of edible fats and oils (other than hydrogenated oil) | 207 |
| | Production of hydrogenated oils (Vanaspati) | 208 |
| | Production of other food products such as sweet-meat and condiments, muri, murki, chira, khoi, cocoa, chocolate, toffee, lozenge | 209 |
| 21 | Beverages:— | |
| | Production of distilled spirits, wines, liquor from alcoholic malt, fruits and malts in distillery and brewery | 210 |
| | Production of country liquor | 211 |
| | Production of indigenous liquor such as toddy, liquor from mahua, plam juice | 212 |
| | Production of other liquors not covered above | 213 |
| | Production of aerated and mineral water | 214 |
| | Production of ice | 215 |
| | Production of ice-cream | 216 |
| | Processing of tea in factories | 217 |
| | Processing of coffee in curing works | 218 |
| | Production of other beverages | 219 |
| 22 | Tobacco Products:— | |
| | Manufacture of bidi | 320 |
| | Manufacture of cigars and cheroots | 221 |
| | Manufacture of cigarette and cigarette tobacco | 222 |
| | Manufacture of hookah tobacco | 223 |
| | Manufacture of snuff | 224 |
| | Manufacture of jerda and other chewing tobacco | 225 |
| | Manufacture of other tobacco products | 226 |
| 23 | Textile—Cotton:— | |
| | Cotton ginning, cleaning, pressing and baling | 230 |
| | Cotton spinning (other than in mills) | 231 |
| | Cotton spinning and weaving in mills | 232 |
| | Cotton dyeing, bleaching | 233 |
| | Cotton weaving in power looms | 234 |
| | Cotton weaving in handlooms | 235 |
| | Manufacturing of khadi textile in handlooms | 236 |
| | Printing of cotton textile | 237 |
| | Manufacturing of cotton nets | 238 |
| | Manufacturing of cotton, cordage, rope and twine | 239 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| 24 | Textile—Jute:— | |
| 240 | Jute pressing and baling | |
| | Jute spinning and weaving | 241 |
| | Dyeing and bleaching of jute | 242 |
| | Printing of jute textile | 243 |
| | Manufacture of other products like rope, cordage from jute and similar fibre such as hemp, mesta | 244 |
| 25 | Textile—Wool:— | |
| | Wool baling and pressing | 250 |
| | Wool cleaning and processing (securing) | 251 |
| | Wool spinning and weaving in mill | 252 |
| | Wool spinning other than in mills | 253 |
| | Wool weaving in powerloom | 254 |
| | Wool weaving in handloom | 255 |
| | Embroidery and art work in woollen textile | 256 |
| 26 | Textile—Silk:— | |
| | Spinning and weaving of silk textile in mill | 260 |
| | Dyeing and bleaching of silk | 261 |
| | Spinning of silk other than in mills | 262 |
| | Weaving of silk textile by power loom | 263 |
| | Weaving of silk textile by handloom | 264 |
| | Printing of silk textile | 265 |
| | Manufacture of silk cordage, rope and twine | 266 |
| 27 | Textile—Miscellaneous:— | |
| | Manufacture of carpet and all other similar type of textile products | 270 |
| | Manufacture of hosiery and other knitted fabrics and garments | 271 |
| | Embroidery and making of crepe lace and fringes | 272 |
| | Making of textile garments including raincoats and headgear | 273 |
| | Manufacture of made up textile goods except wearing apparel such as curtains, pillow cases, bedding materials, mattress, textile bags | 274 |
| | Manufacture of water-proof textile products such as oil cloth, tarpaulin | 275 |
| | Manufacture and recovery of all types of fibres for purposes of padding, wadding, and upholstery filling | 276 |
| | Manufacture of coir and coir products | 277 |
| | Manufacture of umbrellas | 278 |
| | Processing and manufacture of textile products not covered above | 279 |
| 28 | Manufacture of Wood and Wooden Products:— | |
| | Sawing and planning of wood | 280 |
| | Manufacture of wooden furniture & fixtures | 281 |
| | Manufacture of structural wooden goods (including treated timber) such as beams, posts, doors, windows | 282 |
| | Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures | 283 |
| | Manufacture of other wooden products such as utensil, toys, artwares | 284 |
| | Manufacture of veneer and plywood | 285 |
| | Manufacture of plywood products such as tea chest | 286 |
| | Manufacture of boxes and packing cases other than plywood | 287 |
| | Manufacture of materials from cork, bamboo, cane, leaves and other allied products | 288 |
| | Manufacture of other wood and allied products not covered above | 289 |
| 29 | Paper and paper Products:— | |
| | Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board in mill | 290 |
| | Manufacture of pulp from wood, rags, wastepaper and other fibres and the conversion of such pulp into any kind of paper and paper board handmade | 291 |
| | Manufacture of products, such as paper bags, boxes, cards, envelopes and moulded pulp goods from paper, paper board and pulp | 292 |
| 30 | Printing and Publishing:— | |
| | Printing and publishing of newspapers and periodicals | 300 |
| | Printing and publishing of books | 301 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| | All other types of printing including lithography, engraving, etching, block making and other work connected with printing industry | 302 |
| | All types of binding, stiching sizing and other allied work connected with binding industry | 303 |
| 31 | Leather and Leather Products:— | |
| | Currying, tanning and finishing of hides and skins and preparation of finished leather | 310 |
| | Manufacture of shoes and other leather footwear | 311 |
| | Manufacture of clothing and wearing apparel (except footwear) made of leather and fur | 312 |
| | Manufacture of leather products (except those covered by Code Nos. 311, 312), such as leather upholstery, suitcases, pocket books, cigarette and key cases, purses, saddlery, whip and other articles | 313 |
| | Repair of shoes and other leather foot wear | 314 |
| | Repair of all other leather products except footwear | 315 |
| 32 | Rubber, Petroleum and Coal Products:— | |
| | Manufacture of tyres and tubes | 320 |
| | Manufacture of rubber footwear | 321 |
| | Manufacture of rubber goods used Manufacture of all kinds of other for industrial purpose | 322 |
| | Rubber products from natural or synthetic rubber including rubber raincoat | 323 |
| | Production of petroleum, kerosene and other petroleum products in petroleum refineries | 324 |
| | Production of coaltar and coke in coke oven | 325 |
| | Manufacture of other coal and coaltar products not covered elsewhere | 326 |
| 33 | Chemicals and Chemical Products:— | |
| | Manufacture of basic industrial chemicals such as acids, alkalis & their salts not elsewhere specified | 330 |
| | Manufacture of dyes, paints, colours and varnishes | 331 |
| | Manufacture of fertilizers | 332 |
| | Manufacture of ammunition, explosives and fire works | 333 |
| | Manufacture of matches | 334 |
| | Manufacturs of medicines, pharmaceutical preparations, perfumes, cosmetics and other toilet preparations except soap | 335 |
| | Manufacture of soap and other washing and cleaning compounds | 336 |
| | Manufacture of turpentine, synthetic, resin, and plastic products and materials (including synthetic rubber) | 337 |
| | Manufacture of common salt | 338 |
| | Manufacture of other chemicals & chemical products not covered above (including inedible oils and fats) | 339 |
| 34 | Non-metallic Mineral Products other than Petroleum and Coal:— | |
| | Manufacture of structural clay products such as bricks, tiles | 340 |
| | Manufacture of cement and cement products | 341 |
| | Manufacture of lime | 342 |
| | Manufacture of structural stone goods, stone dressing and stone cruching | 343 |
| | Manufacture of stonewares, other than images | 344 |
| | Manufacture of stone images | 345 |
| | Manufacture of plaster of paris and its products | 346 |
| | Manufacture of asbestos products | 347 |
| | Manufacture of mica products | 348 |
| 35 | Manufacture of earthenware and earthen pottery:— | 350 |
| | Manufacture of chinaware and crockery | 351 |
| | Manufacture of porcelain and its products | 352 |
| | Manufacture of glass bangles and beads | 353 |
| | Manufacture of glass apparatus | 354 |
| | Manufacture of earthen image, busts and statues | 355 |
| | Manufacture of earthen toys and artwares except those covered by code No. 355 | 356 |
| | Manufacture of glass and glass products except optical and photographic lenses and glass products covered above | 357 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| 35 | Manufacture of other non-metallic mineral products not elsewhere specified | 359 |
| 36 | Basic Metals and their products except Machinery and Transport Equipment:— | |
| | Manufacture of iron and steel including smelting, refining, rolling, conversion into basic forms such as billets, blooms, tubes, rods | 360 |
| | Manufacture including smelting, refining of non-ferrous metals and alloys in basic forms | 361 |
| | Manufacture of armaments | 362 |
| | Manufacture of structural steel products such as joist, rail, sheet, plate | 363 |
| | Manufacture of iron and steel furniture | 364 |
| | Manufacture of brass and bell metal products | 365 |
| | Manufacture of aluminium products | 366 |
| | Manufacture of metal products (other than of iron, brass, bell metal and aluminium) such as tin can | 367 |
| | Enamelling, galvanising, plating, (including electroplating) polishing and welding of metal products | 368 |
| | Manufacture of sundry hardwares such as G. I. pipe, wire net, bolt, screw, bucket, cutlery (This will also include the manufacture of sundry ferrous engineering products done by jobbing engineering concerns which cannot be classified in major groups 36, 37, 38 and 39) | 369 |
| 37 | Machinery (All kinds other than transport) and Electrical Equipment:— | |
| | Manufacture and assembling of machinery (other than electrical) except textile machinery | 370 |
| | Manufacture and assembling of prime mover and boilers, other than electrical equipment, such as diesel engines, road rollers, tractors | 371 |
| | Manufacture of machine tools | 372 |
| | Manufacture of textile machinery and accessories | 373 |
| | Manufacture of heavy electrical machinery and equipment such as motors generators, transformers | 374 |
| | Manufacture of electric lamps and fans | 375 |
| | Manufacture of insulated wires and cables | 376 |
| | Manufacture of all kinds of battery | 377 |
| | Manufacture of electronic equipment such as radio, microphone | 378 |
| | Manufacture of electric machinery and apparatus, appliances not specified above | 379 |
| 38 | Transport Equipment:— | |
| | Manufacture, assembly and repairing of locomotives | 380 |
| | Manufacture of wagons, coaches, tramways and other rail road equipment other than that covered by Code No. 363 | 381 |
| | Manufacture and assembling of motor vehicles of all types (excepting motor engines) | 382 |
| | Manufacture of motor vehicles engines parts and accessories | 383 |
| | Repairing and servicing of motor vehicles | 384 |
| | Manufacture of bicycles and tricycles and accessories such as saddle, seat frame, gear | 385 |
| | Building and repairing of water transport equipment such as ships, boats, and manufacture of marine engines | 386 |
| | Manufacture & repair of air transport equipment including aeroplanes, aeroengines | 387 |
| | Repairing of bicycles and tricycles | 388 |
| | Manufacture of other transport equipment not covered above such as animal-drawn and hand drawn vehicles | 389 |
| 39 | Miscellaneous manufacturing Industries:— | |
| | Manufacture of optical instruments and lenses, opthalmic goods and photographic equipment and supplies | 390 |
| | Manufacture of scientific, medical and surgical instruments and equipment and supplies | 391 |
| | Assembling and repairing of watches and clocks | 392 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| | Manufacture of jewellery, silverware and wares using gold and other precious metal | 393 |
| | Manufacture and tuning of Musical Instruments | 394 |
| | Manufacture of stationery articles not covered elsewhere such as pencil, pen-holder, fountain pen | 395 |
| | Manufacture of sports goods | 396 |
| | Manufacture and repair work of goods not assignable to any other group | 399 |
| | *Division 4—Construction:* | |
| 40 | Construction:— | |
| | Construction and maintenance of buildings including erection, flooring, decorative constructions, electrical and sanitary installations | 400 |
| | Construction and maintenance of roads, railways, bridges, tunnels | 401 |
| | Construction and maintenance of telegraph and telephone lines | 402 |
| | Construction and maintenance of water ways and water reservoirs such as bund, embankments, dam, canal, tank, tubewells, wells | 403 |
| | *Division 5—Electricity, Gas, Water and Sanitary Services:* | |
| 50 | Electricity and Gas:— | |
| | Generation and transmission of electric energy | 500 |
| | Distribution of electric energy | 501 |
| | Manufacture of Gas in gas works and distribution to domestic and industrial consumers | 502 |
| 51 | Water Supply and Sanitary Services:— | |
| | Collection, purification and distribution of water to domestic and industrial consumers | 510 |
| | Garbage and sewage disposal, operation of drainage system and all other types of work connected with public health and sanitation | 511 |
| | *Division 6—Trade and Commerce:* | |
| 60 | Wholesale Trade:— | |
| | Wholesale trading in cereals and pulses | 600 |
| | Wholesale trading in vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry and other foodstuff (not covered elsewhere) | 601 |
| | Wholesale trading in all kinds of fabrics, and textiles products such as garments, hessian, gunny bag, silk and woollen yarn, shirtings, suitings, hosiery products | 602 |
| | Wholesale trading in beverages, such as tea (leaf), coffee (seed and powder) aerated water | 603 |
| | Wholesale trading in intoxicants such as wines, liquors. | 604 |
| | Wholesale trading in other intoxicants such as opium, ganja etc. | 605 |
| | Wholesale trading in tobacco, bidi, cigarettes and other tobacco products | 606 |
| | Wholesale trading in animals | 607 |
| | Wholesale trading in straw and fodder | 608 |
| 61 | Wholesale trading in medicines and chemicals | 610 |
| | Wholesale trading in fuel and lighting products such as coke, coal, kerosene, candle. | 611 |
| | Wholesale trading in toilets, perfumery and cosmetics | 612 |
| | Wholesale trading in metal, porcelain and glass utensils, crockery, chinaware | 613 |
| | Wholesale trading in wooden, steel and other metallic furniture and fittings. | 614 |
| | Wholesale trading in foot-wear | 615 |
| | Wholesale trading in tyres, tubes and allied rubber products. | 616 |
| | Wholesale trading in petrol, mobil oil and allied products | 617 |
| | Wholesale trading in other household equipment not covered above | 618 |
| 62 | Wholesale trading in bricks, tiles and other building materials | 620 |
| | Wholesale trading in wood, bamboo, cane, thatches and similar products | 621 |
| 63 | Wholesale trading in paper and other stationery goods | 630 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| | Wholesale trading in agricultural and industrial machinery equipment and tools and appliances other than electrical | 631 |
| | Wholesale trading in electrical machinery and equipment like motor, battery, electric fan, bulb | 632 |
| | Wholesale trading in all kinds of transport and storage equipment | 633 |
| | Wholesale trading in skins, leather and fur | 634 |
| | Wholesale trading in clocks, eye glasses, frames. | 635 |
| | Wholesale trading in hardware and sanitary equipment | 636 |
| | Wholesale trading in scientific, medical and surgical instruments | 637 |
| | Wholesale trading in precious metals and stones, gold and silver-wares and jewellery | 638 |
| | Wholesale trading in all goods not covered above | 639 |
| 64 | Retail Trade:— | |
| | Retail trading in cereals, pulses, vegetables, fruits, sugar, spices, oil, fish, dairy products, eggs, poultry | 640 |
| | Retail trading in beverages such as tea (leaf), coffee (seed and powder), aerated water | 641 |
| | Retail trading in intoxicants such as wines, liquors | 642 |
| | Retail trading in other intoxicants such as opium, ganja etc. | 643 |
| | Retail trading in tobacco, bidi, cigarettes and other tobacco products | 644 |
| | Retail trading in fuel such as coke, coal, firewood and kerosene | 645 |
| | Retail trading in food stuffs like sweetmeats, condiments, cakes biscuits, etc. | 646 |
| | Retail trading in animals | 647 |
| | Retail trading in straw and fodder | 648 |
| 65 | Retail trading in fibres, yarns, dhoti, saree, readymade garments of cotton, wool, silk and other textiles and hosiery products; (this includes retail trading in piece goods of cotton, wool silk and other textiles) | 650 |
| | Retail trading in toilet goods, perfumes and cosmetics | 651 |
| | Retail trading in medicines and chemicals | 652 |
| | Retail trading in foot-wear, headgear such as hat, umbrellas shoes and chappals | 653 |
| | Retail trading in tyres, tubes and allied rubber products | 654 |
| | Retail trading in petrol, mobil oil and allied products | 655 |
| 66 | Retail trading in wooden steel and other metallic furniture and fittings | 660 |
| | Retail trading in stationery goods and papers | 661 |
| | Retail trading in metal, porcelain and glass utensils | 662 |
| | Retail trading in earthenware and earthen toys | 663 |
| | Retail trading in other household equipment not covered above | 664 |
| 67 | Retail trading in bricks, tiles and other building materials | 670 |
| | Retail trading in hardware and sanitary equipment | 671 |
| | Retail trading in wood, bamboo cane, bark and thatches | 672 |
| | Retail trading in other building materials | 673 |
| 68 | Retail trading in agricultural and industrial machinery equipment, tools and appliances | 680 |
| | Retail trading in transport and storage equipments | 681 |
| | Retail trading in electrical goods like electric fan, bulb, etc. | 682 |
| | Retail trading in skins, leather and furs and their products excluding foot-wear and headgear | 683 |
| | Retail trading in clock and watch, eye glass, frame | 684 |
| | Retail trading in scientific, medical and surgical instruments | 685 |
| | Retail trading in precious stones and jewellery | 686 |
| | Retail trading in musical instruments, gramophone record, pictures and paintings including curio dealing | 687 |
| | Book-selling | 688 |
| | Retail trading in goods unspecified | 689 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| 69 | Trade and Commerce Miscellaneous:— | |
| | Importing and exporting of goods and commodities | 690 |
| | Real estate and properties | 691 |
| | Stocks, shares and futures | 692 |
| | Providents and insurances | 693 |
| | Money lending (indigenous) | 694 |
| | Banking and similar type of financial operation | 695 |
| | Auctioneering | 696 |
| | Distribution of motion pictures | 697 |
| | All other activities connected with trade and commerce not covered above including hiring out of durable goods, such as electric fan, microphone, rickshaw, etc. | 699 |
| *Division 7.—Transport, Storage and Communication:* | | |
| 70 | Transport:— | |
| | Transporting by railways | 700 |
| | Transporting by tramway and bus service | 701 |
| | Transporting by motor vehicles (other than omnibus) | 702 |
| | Transporting by road through other means of transport such as hackney carriage, bullock cart, ekka | 703 |
| | Animal transporting by animals such as horses, elephant, mule, camel | 704 |
| | Transporting by man such as carrying of luggage, hand cart driving, rickshaw pulling, cycle rickshaw driving | 705 |
| | Transporting by boat, steamer, ferry, etc. by river, canal | 706 |
| | Transporting by boat, steamer ship, cargo boat by sea or ocean | 707 |
| | Transporting by air | 708 |
| | Transporting by other means not covered above | 709 |
| 71 | Services incidental to transport such as packing, carting travel agency | 710 |
| 72 | Storage and Ware Housing:— | |
| | Operation of storage such as warehouses | 720 |
| | Operation of storage such as cold-storage | 721 |
| | Operation of storage of other type | 722 |
| 73 | Communication:— | |
| | Postal, telegraphic, wireless and signal communications | 730 |
| | Telephone communication | 731 |
| | Information and broadcasting | 732 |
| *Division 8.—Services:* | | |
| 80 | Public services (this does not include Govt., Quasi-Govt. or local body activities, other than administrative, in such fields as transport, communication, information and broadcasting, education and scientific services, health, industries, production, construction, marketing & operation of financial institution each of which is classified in the appropriate industry groups):— | |
| | Public services in Union and State army including territorial corps and volunteer crops | 800 |
| | Public service in Navy | 801 |
| | Public service in Air Force | 802 |
| | Public service in Police | 803 |
| | Public service in administrative departments and offices of Central Government | 804 |
| | Public service in administrative departments and offices of Quasi-Government organisation, municipalities, local boards, etc. | 805 |
| | Public service in administrative departments and offices of State Governments | 809 |
| 81 | Educational and Scientific Services:— | |
| | Educational services such as those rendered by technical colleges, technical schools and similar technical and vocational institutions | 810 |
| | Educational services such as those rendered by colleges, schools and similar other institutions of non-technical type | 811 |
| | Scientific services and research institutions not capable of classification under any individual group | 812 |
| 82 | Medical and Health Services:— | |
| | Public health and medical services rendered by organisations and individuals such as by hospitals, sanatoria, nursing homes, maternity and child welfare clinic as also by hakimi, unani, ayurvedic, allopathic and homeopathic particulars | 820 |
| | Veterinary services rendered by organisations and individuals | 821 |

| Major Group (Code) | Description | Minor Group (Code) |
|---|---|---|
| 83 | Religious and Welfare Services:— | |
| | Religious services rendered by religious organisations and their establishments maintained for worship or promotion of religious activities, this includes missions, ashrams and other allied organisations | 830 |
| | Religious and allied services rendered by pandit, priest, preceptor, fakir, monk | 831 |
| | Welfare services rendered by organisations operating on a non-profit basis for promotion of welfare of the community such as relief societies red-cross organisation for the collection and allocation of contribution for charity | 832 |
| 84 | Legal Services:— | |
| | Legal services rendered by barrister, advocate, solicitor, mukteer, pleader, mukurie, munshi | 840 |
| | Matrimonial services rendered by organizations and individuals | 841 |
| 85 | Business Services:— | |
| | Engineering services rendered by professional organisations or individuals | 850 |
| | Business services rendered by organisations of accountants, auditors, book-keepers or like individuals | 851 |
| | Business services rendered by professional organisations or individuals such as of those of advertising and publicity agencies | 852 |
| | Business services rendered by professional organisations or individuals such as of those rendered by news agency, news paper correspondent, columnist, journalists, editors, authors | 853 |
| 86 | Community Services and Trade and Labour Associations:— | |
| | Services rendered by trade associations, chambers of commerce, trade unions and similar other organisations | 860 |
| | Services rendered by civic, social, cultural, political, and fraternal organisations such as rate payers association, club, library | 861 |
| | Community services such as those rendered by public libraries, museums, botanical and zoological gardens etc. | 862 |
| 87 | Recreation Services:— | |
| | Production of motion picture and allied services such as processing editing etc. | 870 |
| | Recreation services rendered by cinema houses by exhibition of motion pictures | 871 |
| | Recreation services rendered by organisations and indiviuals such as those of theatres, opera-companies, ballet and dancing parties, musicians, exhibitions, circus, carnivals | 872 |
| | Recreation services rendered by indoor and outdoor sports by organisations and individuals including horse, motor etc. racing | 873 |
| 88 | Personal Services:— | |
| | Services rendered to households such as those by domestic servants, cooks | 880 |
| | Services rendered to households such as those by governess, tutor, private secretary | 881 |
| | Services rendered by hotels, boarding houses, eating houses, cafes, restaurants and similar other organisations to provide lodging and boarding facilities | 882 |
| | Laundry services, rendered by organisations and individuals, (this includes all types of cleaning, dyeing, bleaching, dry cleaning services) | 883 |
| | Hair dressing, other services rendered by organisation and individuals such as those by barber, hair-dressing saloon and beauty shops | 884 |
| | Services rendered by portrait and commercial photographic studios | 885 |
| 89 | Services (not elsewhere classified):— | |
| | Services rendered by organisations or individuals not elsewhere classified | 890 |
| | *Division 9—Activities not adequately described:* | |
| 90 | Activities unspecified and not adequately described including activities of such individuals who fail to provide sufficient information about their industrial affiliation to enable them to be classified | 900 |
| | Fresh entrants to the Labour Market | 999 |

APPENDIX—II

# NATIONAL CLASSIFICATION OF OCCUPATIONS

**(Code Structure)**

Which classifies occupations into

331 Occupational Families (three-digit code numbers)
75 Occupational Groups (two-digit code numbers)
11 Occupational Divisions (one-digit code numbers)

*Note I.*—The Classification does not provide separate code numbers for Apprentices, Foremen and Instructors (in-plant only). These may be classified by giving the prefixes of "A", "B", or "C" respectively before the code number of the occupation which is being learned, supervised or instructed.

*Note II.*—n. e. c.—not elsewhere classified.

---

*DIVISIONS, GROUPS AND FAMILIES*

0 *Professional, Technical and Related Workers:*

00 Architects, Engineers and Surveyors:—
- 000 Architects
- 001 Civil Engineers (including overseers)
- 002 Mechanical Engineers
- 003 Electrical Engineers
- 004 Chemical Engineers
- 005 Metallurgical Engineers
- 006 Mining Engineers
- 007 Surveyors
- 009 Architects, Engineers and Surveyors, n. e. c.

01 Chemists, Physicists, Geologists and other Physical Scientists:—
- 010 Chemists, except Pharmaceutical Chemists
- 011 Pharmaceutical Chemists
- 012 Physicists
- 013 Meteorologists
- 014 Geologists and Geophysicist
- 015 Mathematicians
- 019 Chemists, Physicists, Geologists and other Physical Scientists, n.e.c.

02 Biologists, Veterinarians, Agronomists & Related Scientists:—
- 020 Biologists and Animal Scientists
- 021 Veterinarians
- 022 Sliviculturists
- 023 Agronomists and Agricultural Scientists
- 029 Biologists, Veterinarians, Agronomists and Related Scientists, n.e.c.

03 Physicians, Surgeons and Dentists
- 030 Physicians and Surgeons, Allopathic
- 031 Physicians, Ayurvedic
- 032 Physicians, Homeopathic
- 033 Physicians, others
- 034 Physiologists
- 035 Dentists
- 039 Physicians, Surgeons and Dentists, n.e.c.

04 Nurses, Pharmacists and other Medical & Health Technicians:—
- 040 Nurses
- 041 Midwives and Health Visitors
- 042 Nursing Attendants and Related Workers
- 043 Pharmacists and Pharmaceutical Technicians
- 044 Vaccinators
- 045 Physiotherapists, Masseurs and Related Technicians
- 046 Sanitation Technicians
- 047 Optometrists and Opticians
- 049 Medical and Health Technicians, n.e.c. (excluding Laboratory Assistants see 091).

05 Teachers:—
- 050 Teachers, University
- 051 Teachers, Secondary Schools
- 052 Teachers, Middle and Primary Schools
- 053 Teachers, Nursery and Kindergarten Schools
- 059 Teachers, n.e.c.

06 Jurists:—
- 060 Judges and Magistrates
- 061 Legal Practitioners and Advisers
- 062 Law Assistants
- 069 Jurists, and Legal Technicians (including Petition Writers)

**07** Social Scientists and Related Workers:—
- 070 Economists
- 071 Accountants and Auditors
- 072 Statisticians and Actuaries
- 073 Geographers
- 074 Psychologists
- 075 Personnel Specialists
- 076 Labour and Social Welfare Workers
- 077 Sociologists and Anthropologists
- 078 Historians, Archeologists, Political Scientists and Related Workers
- 079 Social Scientists and Related Workers, n.e.c.

**08** Artists, Writers and Related Workers:—
- 080 Authors
- 081 Editors, Journalists and Related Workers
- 082 Translators, Interpreters and Language Specialists
- 083 Painters, Decorators and Commercial Artists
- 084 Sculptors and Modellers
- 085 Actors and Related Workers
- 086 Musicians and Related Workers
- 087 Dancers and Related Workers
- 089 Artists, Writers and Related Workers n.e.c.

**09** Draughtsmen, and Science and Engineering Technicians, n.e.c.
- 090 Draughtsmen
- 091 Laboratory Assistants
- 099 Science and Engineering Technicians, n.e.c.

**0X** Other Professional, Technical and Related Workers:—
- 0X0 Ordained Religious Workers
- 0X1 Non-ordained Religious Workers
- 0X2 Astrologers, Palmists and Related Workers
- 0X9 Other Professional, Technical and Related Workers, n.e.c.
- 0X4 Geographers

**1** *Administrative, Executive and Managerial* Workers
- 0X3 Librarians, Archivists and Related *Workers*:

**10** Administrators and Executive Officials, Government:—
- **100** Administrators and Executive Officials, Central Government (All Defence Services Personnel to be included in this family)
- 101 Administrators and Executive Officials, State Government
- 102 Administrators and Executive Officials, Local Bodies.
- 103 Administrators and Executive Officials, Quasi-Government
- 104 Village Officials
- 109 Administrators and Executive Officials, Government, n.e.c.

**11** Directors and Managers, Whosesale and Retail Trade:—
- 110 Directors and Managers, Wholesale Trade
- 111 Directors and Managers, Retail Trade

**12** Directors, Managers and Working Proprietors, Financial Institutions:—
- 120 Directors, Managers and Working Proprietors, Banks
- 121 Directors, Managers and Working Proprietors, Insurance
- 129 Directors, Managers and Working Proprietors, Financial Institutions,

**13** Directors, Managers and Working Proprietors, other:—
- 130 Directors, Managers and Working Proprietors, Mining, Quarrying and Well Drilling
- 131 Directors, Managers and Working Proprietors, Construction
- 132 Directors, Managers and Working Proprietors, Electricity, Gas, Water and Sanitary.
- 133 Directors, Managers and Working Proprietors, Manufacturing
- 134 Directors, Managers and Working Proprietors, Transport and Communication
- 135 Directors, Managers and Working Proprietors, Recreation, Entertainment and Catering Services
- 136 Directors, Managers and Working Proprietors, Other Services
- 139 Directors, Managers and Working Proprietors, n.e.c.

2 *Clerical and Related Workers*:

**20** Book-keepers and Cashiers:—
- 200 Book-keepers, Book-keeping and Accounts Clerks
- 201 Cashiers
- 202 Ticket Sellers and Ticket Inspectors including ushers and Ticket Collectors (excluding those on moving transport)

21 Stenographers and Typists:—
- 210 Stenographers
- 211 Typists

22 Office Machine Operators:
- 220 Computing Clerks and Calculating Machine Operators
- 221 Punch Card Machine Operators
- 229 Office Machine Operators, n.e.c.

28 Clerical Workers, Miscellaneous:—
- 280 General and other Ministerial Assistants and Clerks
- 289 Miscellaneous Office Workers including Record keepers, Moharrers, Diaphers, Packers and Binders of office papers.

29 Unskilled Office Workers:—
- 290 Office Attendants, Ushers, Hall Porters etc. n.e.c.

3 *Sales Workers*:

30 Working Proprietors, Wholesale and Retail Trade:—
- 300 Working Proprietors, Wholesale Trade
- 301 Working Proprietors, Retail Trade

31 Insurance and real estate salemen, salesmen of securities and services, and auctioneers:—
- 310 Agents and Salesmen, Insurance
- 311 Agents, Brokers and Salesmen, Real Estate
- 312 Brokers and Agents, Securities and Shares
- 313 Auctioneers
- 314 Valuers and Appraisers
- 319 Insurance and Real Estate Salesmen, Salesmen of Securities and Services, and Auctioneers, n.e.c.

32 Commercial Travellers and Manufacturers' Agents:—
- 320 Commercial Travellers
- 321 Manufacturers' Agents
- 329 Commercial Travellers and Manufacturers' Agents, n.e.c.

33 Salesmen, Shop Assistants and Related Workers:—
- 330 Salesmen and Shop Assistants, Wholesale and Retail Trade
- 331 Hawkers, Pedlars and Street Vendors
- 339 Salesmen, Shop Assistants and Related Workers, n.e.c.

34 Money-Lenders and Pawn-Brokers:—
- 340 Money-Lenders (including Indigenous Bankers)
- 341 Pawn-Brokers

4 *Farmers, Fishermen, Hunters, Loggers and Related Workers*:

40 Farmers and Farm Managers:—
- 400 Cultivators (Owners)
- 401 Cultivators (Tenants)
- 402 Farm Managers, Inspectors and Overseers
- 403 Planters and Plantation Managers
- 404 Farmers and Farm Managers, Animals, Birds and Insects Rearing
- 409 Farmers and Farm Managers, n.e.c.

41 Farm Workers:—
- 410 Farm Machinery Operators
- 411 Farm Workers, Animals, Birds and Insects Rearing
- 412 Gardeners (malis)
- 413 Tappers (Palm, Rubber trees, etc.)
- 414 Agricultural Labourers
- 415 Plantation Labourers
- 419 Farm Workers, n.e.c.

42 Hunters and Related Workers:—
- 420 Hunters
- 421 Trappers
- 429 Hunters and Related Workers, n.e.c.

43 Fishermen and Related Workers:—
- 430 Fishermen, Deep Sea
- 431 Fishermen, Inland and Coastal Waters
- 432 Conch and Shell gatherers, Sponge and Pearl Divers
- 439 Fishermen and Related Workers, n.e.c.

44 Loggers and other Forestry Workers:—
- 440 Forest Rangers and Related Workers
- 441 Harvesters and Gatherers of Forest Products including lac (except logs)
- 442 Log Fellers and Wood Cutters
- 443 Charcoal Burners and Forest Product Processors
- 449 Loggers and other Forestry Workers, n.e.c.

5 *Mines, Quarrymen and Related Workers*:

50 Miners and Quarrymen:—
- 500 Miners
- 501 Quarrymen

502 Drillers, Mines and Quarries
503 Shot Firers
509 Miners and Quarrymen, n.e.c.

51 Well Drillers and Related Workers:—
510 Well Drillers, Petroleum and Gas
511 Well Drillers, other than Petroleum and Gas

52 Mineral Treaters:—
520 Mineral Treaters

59 Miners, Quarrymen and Related Workers, n.e.c.:—
590 Miners, Quarrymen and Related Workers, n.e.c.

6 *Workers in Transport and Communication Occupations*:

60 Deck Officers, Engineer Officers and Pilots, Ship:—
600 Deck Officers and Pilots, Ship
601 Ship Engineers

61 Deck and Engine-room Ratings (Ship), Barge Crews and Boatmen:—
610 Deck Ratings (Ship), Barge Crews and Boatmen
611 Engine-Room Ratings, Firemen and Oilers, Ship

62 Aircraft Pilots, Navigators and Flight Engineers:—
620 Aircraft Pilots
621 Flight Engineers
622 Flight Navigators

63 Drivers and Firemen, Railway Engine:—
630 Drivers
631 Firemen

64 Drivers, Road Transport:—
640 Tramcar Drivers
641 Motor Vehicle and Motor Cycle Drivers
642 Cycle Rickshaw Drivers and Rickshaw Pullers
643 Animal Drawn Vehicle Drivers
649 Drivers, Road Transport, n.e.c. (including Palki and Doli Bearers)

65 Conductors, Guards and Brakesmen (Railway):—
650 Conductors
651 Guards
652 Brakesmen

66 Inspectors, Supervisors, Traffic Controllers, Despatchers, Transport:—
660 Inspectors, Supervisors and Station Masters
661 Traffic Controllers
662 Signalmen and Pointsmen

67 Telephone, Telegraph and Related Telecommunication Operators:—
670 Telephone Operators
671 Telegraphists and Signallers
672 Radio Communication and Wireless Operators
673 Teleprinter Operators
679 Telephone, Telegraph and Related Tele-Communication Operators, n.e.c.

68 Postmen and Messengers:—
680 Postmen
681 Messengers (including Dak Peons)

69 Workers in Transport and Communication Occupations, n.e.c.
690 Ticket Sellers, Ticket Inspectors, including Ushers and Ticket Collectors on moving Transport
691 Conductors, Road Transport
692 Workers in Transport Occupations, n.e.c.
693 Inspectors, Traffic Controllers and Despatchers, Communications
694 Workers in Communication Occupation, n.e.c.

7-8 *Craftsmen, Production Process Workers, and Labourers not elsewhere classified*:

70 Spinners, Weavers, Knitters, Dyers and Related Workers:—
700 Fibre Preparers, Ginners, Cleaners, Scourers, etc.
701 Blow-room Workers and Carders
702 Spinners, Piecers and Winders
703 Warpers and Sizers
704 Drawers and Weavers
705 Pattern Card Preparers (excluding Printers)
706 Bleachers, Dyers and Finishers
707 Knitters and Lace Makers
708 Carpet Makers and Finishers
709 Spinners, Weavers, Knitters, Dyers and Related Workers, n.e.c.

71 Tailors, Cutters, Furriers and Related Workers:—
- 710 Tailors, Dress Makers and Garment Makers
- 711 Hat and Head-gear Makers
- 712 Furriers
- 713 Upholsterers and Related Workers
- 714 Pattern Makers, Markers and Cutters, Textile Products, Leather Garments and Gloves
- 715 Sewers, Embrioderers and Darners, Textile and Fur Products
- 719 Tailors, Cutters, Furriers and Related Workers, n.e.c.

72 Leather Cutters, Lasters and Sewers (except Gloves and Garments) and Related Workers:—
- 720 Shoe Makes and Shoes Repairers
- 721 Cutters, Lasters, Sewers, Footwear and Related Workers
- 722 Harness and Saddle Makers
- 729 Leather Cutters, Lasters and Sewers (except Gloves and Garments) and Related Workers, n.e.c.

73 Furnacemen, Rollers, Drawers, Moulders and Related Metal Making and Treating Workers:—
- 730 Furnacemen, Metal
- 731 Annealers, Temperers and Related Heat Treaters
- 732 Rolling Mill Operators, Metal
- 733 Blacksmiths, Hammersmiths and Forgemen
- 734 Moulders and Coremakers
- 735 Metal Drawers and Extruders
- 739 Furnacemen, Rollers, Drawers, Moulders and Related Metal-Making and Treating Workers n.e.c.

74 Precision Instrument Makers, Watch Makers, Jewellers and Related Workers:—
- 740 Precision Instrument Makers, Watch and Clock Makers and Repairmen
- 741 Jewellers, Goldsmiths and Silversmiths
- 742 Jewellery Engravers

75 Tool-Makers, Machinists, Plumbers, Welders, Platers and Related Workers:—
- 750 Fitter-Machinists, Tool-makers and Machine Tool Setters
- 751 Machine Tool Operators
- 752 Fitter-Assemblers and Machine Erectors (Except Electrical and Precision Instrument Fitter-Assemblers)
- 753 Mechanics-Repairmen (Except Electrical and Precision Instrument Repairmen)
- 754 Sheet Metal Workers
- 755 Plumbers and Pipe Fitters
- 756 Welders and Flame Cutters
- 757 Metal Plate and Structural Metal Workers
- 758 Electro-Platers, Dip-Platers and Related Workers
- 759 Tool-Makers, Machinists, Plumbers, Welders, Platers and Delated Workers, n.e.c. (including Metal-engravers other than printing)

76 Electricians and Related Electrical and Electronics Workers:—
- 760 Electricians, Electrical Repairmen and Related Electrical Workers
- 761 Electrical and Electronics Fitters
- 762 Mechanics-Repairmen, Radio and Television
- 763 Installers and Repairmen, Telephone and Telegraph
- 764 Linemen and Cable Jointers
- 769 Electricians and Related Electrical and Electronics Workers, n.e.c.

77 Carpenters, Joiners, Cabinet Makers, Coopers and Related Workers:—
- 770 Carpenters, Joiners, Pattern Makers (Wood)
- 771 Shipwrights and Body Builders
- 772 Sawyers and Wood Working Machinists
- 773 Coach and Body Builders
- 774 Cart Builders and Wheel Wrights
- 775 Cabinet Makers
- 779 Carpenters, Joiners, Cabinet Makers, Coopers. and Related Workers, n.e.c.

78 Painters and Paper Hangers:—
- 780 Painters and Paper Hangers

79 Bricklayers, Plasterers and Construction Workers n.e.c.:—
- 790 Stone Cutters, Stone Carvers and Stone Dressers
- 791 Bricklayers, Plasterers, Masons
- 792 Glaziers

793 Cement Finishers and Terrazzo and Mosaic Workers
794 Hut Builders and Thatchers
795 Well Diggers
799 Bricklayers, Plasterers and Construction Workers, n.e.c.

80 Compositors, Printers, Engravers, Book-Binders and Related Workers:—
800 Type-setting Machine Operators
801 Compositors
802 Proof-Readers and Copy Holders
803 Printers (Paper)
804 Printers (Textile)
805 Photo-Litho Operators, Photo-lithographers
806 Engravers, Etchers & Block Makers (Printing)
807 Stereotypers
808 Book Binders
809 Compositors, Printers, Engravers, Book-Binders and Related Workers, n.e.c.

81 Potters, Kilnmen, Glass and Clay Formers and Related Workers:—
810 Furnacemen, Kilnmen and Ovenmen
811 Potters, and Related Clay Formers
812 Blowers and Benders, Glass
813 Moulders and Pressers, Glass
814 Grinders, Cutters, Decorators and Finishers
815 Pulverisors and Mixers, Cement, Clay and other Ceramics
819 Potters, Kilnmen, Glass and Clay Formers and Related Workers, n.e.c.

82 Millers, Bakers, Brewmasters and Related Food and Beverage Workers:—
820 Millers, Pounders, Huskers and Parchers, Grains and Related Food Workers
821 Crushers and Pressers, Oil Seeds
822 Dairy Workers (Non-Farm)
823 Khandsari, Sugar and Gur Makers
824 Bakers, Confectioners, Candy and Sweetmeat Makers
825 Makers of Aerated Water and Brewers
826 Food Canners, Preservers and Related Workers
827 Butchers
828 Coffee and Tea Blenders and Related Workers
829 Millers, Bakers, Brewmasters and Related Food and Beverage Workers, n.e.c.

83 Chemical and Related Process Workers:—
830 Batch and Continuous Still Operators
831 Cookers, Roasters and other Heat Treaters, Chemical and Related Processes
832 Crushers, Millers and Calenderers, Chemical and Related Processes
833 Paper Pulp Preparers
834 Paper Makers
839 Chemical and Related Process Workers, n.e.c.

84 Tobacco Preparers and Products Makers:
840 Curers, Graders and Blenders, Tobacco
841 Cigarette Machine Operators
842 Cheroot, Cigar and Bidi Makers
843 Snuff and Zarda Makers
849 Tobacco Preparers and Product Makers, n.e.c.

85 Craftsmen and Production Process Workers n.e.c.
850 Basketry Weavers and Related Workers
851 Tyre Builders, Vulcanisers and Related Rubber Products Makers
852 Plastics Products Makers
853 Tanners, Fellmongers, Pelt Dressers and Related Workers
854 Photographic Dark Room Workers
855 Makers of Musical Instruments and Related Workers
856 Paper Products Makers
859 Craftsmen and Production Process Workers, n.e.c.

86 Testers, Packers, Sorters and Related Workers:—
860 Checkers, Testers, Sorters, Weighers and Counters
861 Packers, Labellers and Related Workers

87 Stationary Engine and Excavating and Lifting Equipment Operators and Related Workers:—
870 Operators, Stationary Engines and Related Equipment

·871 Boilermen and Firemen
872 Crane and Hoist Operators
·873 Riggers and Cable Splicers
874 Operators of Earth-moving and Other Construction Machinery, n.e.c.
·875 Materials-handling Equipment Operators
·876 Oilers and Greasers, Stationary Engines, Motor Vehicles and Related Equipment
879 Stationary Engine, and Excavating and Lifting Equipment Operators and Related Workers, n.e.c.

·89 Labourers, n.e.c.:—
890 Loaders and Unloaders
899 Labourers, n.e.c.

*Service, Sports and Recreation Workers.*

90 Fire Fighters, Policemen, Guards and Related Workers:—
900 Fire Fighters and Related Workers
901 Police Constables, Investigators and Related Workers
902 Customs Examiners, Patrollers and Related Workers
903 Watchmen and Chowkidars
909 Fire Fighters, Policemen, Guards, and Related Workers, n.e.c.

·91 House Keepers, Cooks, Maids and Related Workers:—
910 House Keepers, Matrons, Stewards (Domestic and Institutional)
911 Cooks, Cook-Bearers (Domestic and Institutional)
912 Butlers, Bearers, Waiters, Maids and other Servants (Domestic)
913 Ayas, Nurse-maids
919 House-Keepers, Cooks, Maids, and Related Workers, n.e.c.

·92 Waiters, Bartenders and Related Workers
920 Waiters, Bartenders and Related Workers (Institutional)

93 Building Care-Takers, Cleaners and Related Workers:—
930 Building Care-Takers
931 Cleaners, Sweepers and Watermen

·94 Barbers, Hairdressers, Beauticians and Related Workers:—
940 Barbers, Hairdressers, Beauticians and Related Workers

95 Launderers, Dry Cleaners and Pressers:—
950 Laundrymen, Washermen and Dhobies
951 Dry-cleaners and Pressers

96 Athletes Sportsmen and Related Workers:
960 Athletes, Sportsmen and Related Workers

97 Photographers and Related Camera Operators:—
970 Movie Camera Operators
979 Other Photographers

99 Service, Sports and Recreation Workers, n.e.c.:—
990 Embalmers and Undertakers
999 Service, Sport and Recreation Workers, n.e.c.

X *Workers not Classifiable by occupation*

X0 Workers without occupations:—
X00 Workers without occupations: Matriculates and above
X08 Workers without occupations: Literates
X09 Workers without occupations: Others

X8 Workers Reporting Occupation Unidentifiable or Unclassifiable:—
X80 Workers reporting occupations unidentifiable or unclassifiable

X9 Workers not Reporting Occupation:—
X90 Workers not Reporting occupation.

# INTRODUCING THE DISTRICT

by

G. N. Tiwari

*Deputy Superintendent of Census Operations, Madhya Pradesh*

Situated between 23°5′ and 24°54′ north latitudes and 74°31′ and 73°42′ east longitudes, on the western border of the State, Ratlam district consists of most of the former States of Ratlam, Jaora, Piploda, Panth Piploda, Sailana, Ringnod tahsil of former Dewas Junior State, some villages from Mandsaur tahsil of former Gwalior State, Alot tahsil of former Dewas senior State. The present constitution of the district with details upto village level is given in 1951 Census Handbook of the district. With the exception of Sailana tahsil and adjacent parts of Ratlam and Jaora tahsils which are hilly, the district consists of the Malwa Plateau proper with its rich black cotton soil, and the typical, moderate climate of the plateau. Rainfall is low, but it is sufficient for the *kharif* crops grown in the district. The district is drained by the Chambal and its tributaries into the bay of Bengal, but the south-eastern, hilly part of the district is drained through the Mahi in the Arabian sea. The district is flanked by Mandsaur district in the north, by Rajasthan State and Shajapur district in the north-east, by Ujjain district in the east and south, by Jhabua district in the south and by Rajasthan State in the west. The district consists of four tahsils : Ratlam in the south-east, Sailana in south and west, Jaora in north and west and Alot in north and east.

Containing only 1·11% of the State's area in its 1,878 square miles of territory, the district is one of the smallest in size, ranking 40th in the State. Bhind, Datia and Indore are the three districts having smaller area than Ratlam district. Mahasamund tahsil of Raipur district has the same area as Ratlam district; while eight tahsils in the State have greater areas than the district. To give further idea of the smallness of the district, it may be mentioned that Bastar, the biggest district in the State is eight times the size of Ratlam, Surguja and Raipur are more than four times the size of Ratlam, while Bilaspur and Durg are each $2\frac{1}{2}$ times as big as Ratlam district.

As regards populousness too, the district does not fare any better, accounting only for 1·49% of the States' population, and being the 8th least populous district in the State. Dewas and Vidisha districts have populations closely comparing with the population of Ratlam district. It may be remarked with some interest that Balodabazar and Raipur tahsils of Raipur district, and Bilaspur tahsil of Bilaspur district have each greater population than the population of Ratlam district. By way of other interesting comparisons it may further be remarked that Bilaspur and Raipur, the two biggest districts in the State are each more than four times as populous as Ratlam district.

**Physical aspects*** :

Broadly Ratlam district admits of classification into two natural divisions (i) the Malwa Plateau proper embracing major eastern and northern portion of the district, covering the Ratlam, Jaora and Alot tahsils and (ii) the hilly region covering most of the Sailana tahsil in the south-west, and adjacent eastern portion of Jaora and Ratlam tahsils. The major eastern and northern portion of the district lying on Malwa Plateau proper, has an average altitude of about 1,600′ (in fact the contour of 1,500′ threads through greater portion of the Ratlam, Jaora and Alot tahsils) sloping very gradually towards the north as is indicated by the direction of drainage of its river system. This plateau is intersected by the Chambal and Kshipra and by their tributaries like the Maleni. On either side of the river, there are valleys which are generally four to five miles wide and are at a lower altitude than 1,000′. In the south, to the southwest of the Ratlam town the plateau descends gradually to the valley of the Mahi river which is on an average about 1,250′ high. In the south-east of the district as also of the Ratlam tahsil there are two hills both more than 1,750′ in altitude (i. e. more than 250′ high from the base line). The southern of these hills has a north-south strike, sending a spur eastwards into the Barnagar tahsil, but the northern one is a broad mass of high land. The Barnagar-Ratlam metre guage railway line cuts across the lower of these hills. A peak in the northern extreme of the southern hill is 2,006′ high. Besides these, there are no sizeable masses of hills in the plateau except occasional knolls.

The hilly portion in the south and west of the district comprises almost the whole of Sailana tahsil west of the tahsil headquarters town Sailana. It is flanked in the east by the plateau, running from north to south towards the west of the Ratlam-Jaora road. This plateau which is narrower in the south but gets broader as it goes north is more than 1,750′ in altitude, and covers the north-eastern portion of Sailana and adjacent parts of Ratlam and Jaora tahsils extending northwards into Rajasthan territory. The tahsil headquarters town Sailana lies on the plateau. A peak in the south of this plateau is 1,964 feet in altitude. A knoll, distinct from the plateau but very near its south-western extremity (north of Nal and south of Kalakhet) is 2,010′ in altitude. From the height of 1,750′ there is drop towards the west to the valley of river Mahi which is a narrow grove of about 1,000′ height. This drop of 750′ is through a series of closely packed hills, all below the height of the plateau which makes their eastern extreme. To the west of river Mahi, the elevation again rises through a mass of hills to about 1,500′. The soil

* Based on topo-sheets published by the Survey General of India.

in the hilly portion is poor, sandy and stony while the Bhils who form the greater part of the inhabitants are indifferent cultivators.

**River system :**

The mass of hills and plateau that divide the narrow valley of river Mahi from the rest of the Malwa plateau acts also as a water divide. Mahi river drains into the Arabian sea while the other rivers drain into the Bay of Bengal through the Chambal. Mahi river abuts on the district at a point where boundaries of Jhabua, Dhar and Ratlam districts converge. The river makes at first part of the south-western boundary of Ratlam tahsil and then of Sailana tahsil, crossing as it does so the Ratlam-Nagda metre guage railway. It enters Sailana tahsil of the district beyond villages Nayan, and Semalkheri, flowing in a northerly direction with a westerly inclination through a narrow basin of about 1,000′, skirted by hills on either side. The stream Karan nadi joins it from the east and the stream Telni from the west.

Chambal, the principal river of the plateau part of the district enters the north-east of the district from Ujjain side, making natural boundary between the Alot and Jaora tahsils. It flows through steep banks in a valley of about 4 to 6 miles width which is slightly below 1500′ in altitude. Beyond village Bherka it makes part of the boundary between Alot tahsil and Mandsaur district. It leaves the district as its point of confluence with the Sipra. In the earlier part of its course in the district the river flows almost due north, but beyond Mundla Kalan (where it is fordable) it is slightly bent to the north. After villages Gondi Shankan and Airwas the river is inclined towards the east which direction it maintains till it leaves the district. Kshipra or Sipra, a tributary of Chambal skirts the north-eastern bulge of the district and then bounds the Alot tahsil till it meets Chambal, throughout its course, flowing in a northerly direction slightly bent towards the west. Another important affluent of the Chambal is the Maleni river with its tributary the Kurel.

**Rainfall :**

The district gets rains from the Arabian sea monsoon which is devoid of much of its force by the time it reaches the district. The rains set in sometime in the middle of June and last upto the end of September, July and August having the largest number of rainy days. The rainfall is highest in the south-east Ratlam tahsil while Sailana, Alot and Jaora have some what less rainfall. The average rainfall based on the ten years 1951-60 for the recording stations Ratlam, Sailana and Jaora are respectively 968·01 mm (38·1″), 812·92 mm (32·0″) and 810·31 mm (31·9″). Heaviest rainfall of the decade was received at Ratlam in 1954, being 1,505·9 mm (58 9″). Years 1951, 1953 and 1960 were lean years, the first of these years recording the lowest rainfall (400·1 mm or 15·7″) of the decade at Jaora station.

Climate of the district is moderate, avoiding extremes both of heat and cold.

The decennial means of the mean-maximum (A), maximum (B), mean minimum (C) and minimum (D) temperatures are given in the following table for the years 1951 to 1960.

*Average mean maximum (A), maximum (B), mean minimum (C) and minimum (D) temperatures for the decade 1951-60 for Ratlam observatory for each month separately.*

| Month | A | B | C | D |
|---|---|---|---|---|
| January | 26·3 | 29·8 | 11·0 | 7·0 |
| February | 29·8 | 34·7 | 13·3 | 9·0 |
| March | 34·1 | 38·5 | 18·1 | 12·5 |
| April | 37·7 | 41·4 | 22·6 | 17·5 |
| May | 39·6 | 42·6 | 25·8 | 22·7 |
| June | 36·2 | 40·8 | 25·3 | 21·9 |
| July | 30·2 | 35·2 | 22·5 | 21·4 |
| August | 28·3 | 32·4 | 22·6 | 21.1 |
| September | 30·2 | 34·2 | 22·0 | 19·5 |
| October | 32·3 | 34·9 | 19·1 | 14·9 |
| November | 30·3 | 32·7 | 14·6 | 11·1 |
| December | 28·2 | 30·8 | 12·3 | 8·8 |

The table above shows that on an average January is the coldest month of the year, the mean maximum and mean minimum temperatures being the lowest in that month. Thereafter the temperature goes on increasing both by day and by night till the highest average day and night temperatures are reached in May. The average mean maximum temperature for May is 39·6°C (103·3°F). Thereafter the temperature starts falling, perhaps with the advent of rains, for the next three months. In September and October, while the mean maximum (day temperature) rises, the mean minimum and minimum temperature go on declining.

This is the phenomenon witnessing the transition from rainy to the cold season. In fact average day temperature during even November is higher than that in July and August demonstrating the cooling influence of the rain showers on the atmosphere. After October the day temperature also resumes its downward trend, till the lowest level is reached in January. During the decade the mercury touched the highest level of 43·9°C (111°F) twice i. e. in May 1956 and 1960. The lowest temperature (50°C or 41°F) was similarly recorded in January 1952.

**Distribution of Area and Population :**

Ratlam district has an area of 1,878 sq. miles which supports a population of 483,521. This gives roughly 2·5 acres of land area *per capita* against a higher *per capita* area of 3·4 acres in the State as a whole. The following table gives distribution of area and population of the district among its four tahsils :—

*Distribution of Area and Population, 1961*

| District/Tahsil | Area | Population | | |
|---|---|---|---|---|
| | | Total | Rural | Urban |
| 1 | 2 | 3 | 4 | 5 |
| Ratlam District | 100·00 | 100·00 | 100·00 | 100·00 |
| 1 Jaora Tahsil | 27·95 | 29·38 | 32·14 | 22·50 |
| 2 Alot Tahsil | 19·49 | 17·30 | 20·17 | 10·15 |
| 3 Sailana Tahsil | 25·24 | 14·97 | 19·30 | 4·16 |
| 4 Ratlam Tahsil | 27·32 | 38·35 | 28·39 | 63·19 |

The table brings out the more or less even distribution of area among the tahsils. The biggest Jaora contains between one-third and one-fourth of the district's area, while the smallest Alot contains almost one-fifth. Ratlam, the second biggest tahsil, is almost the same size as Jaora tahsil. The remaining Sailana tahsil contains very nearly a quarter of the district's area and is in that respect the nearest approach to an average tahsil on the assumption of equal distribution of area.

The distribution of population among the tahsils, far from being even, is conspicuously lop-sided. The most populous Ratlam tahsil, containing nearly two-fifth of the district's population, is more than two and half times as populous as the least populated Sailana tahsil, and more than twice as populous as Alot tahsil. Jaora, the second most populous tahsil in the district accounts for almost three-tenth of its population, and is nearly twice as populous as Sailana tahsil. Further to bring home the extreme unevenness of population distribution it may be observed that Ratlam and Jaora tahsils between themselves contain more than two-thirds of the district's population.

Distribution of rural population alone is somewhat less lop-sided. Considering rural areas alone, Jaora emerges as the most populous tahsil, with Ratlam following a close second. Alot and Sailana almost contain the same population—about one-fifth each—of the district's rural population.

The foregoing analysis also gives a general idea of relative compactness of population distribution among tahsils. Thus, on the face of it, Alot and Sailana tahsils contain relatively greater areas than population of the district, the trait being conspicuously pronounced in Sailana tahsil. On the other hand, both Ratlam and Jaora tahsils contain greater proportions of district's population than area. Obviously, therefore, Ratlam and Jaora, are more compactly populated than the district as a whole, whereas Sailana and Alot are not. These general considerations are brought into a clearer focus when seen in conjunction with the population density index i. e. number of people inhabiting unit area. The following statement, therefore, gives the population per sq. mile for the district and each tahsil, separately for total, rural and urban areas. The corresponding figures (of total population only) for 1951 are also presented with a view to highlight changes, if any :—

*Population Density, 1961 & 1951*

| Unit | Population per square mile | | | Ranks | | |
|---|---|---|---|---|---|---|
| | 1951 | 1961 | | 1951 | 1961 | |
| | Total | Total | Rural | Total | Total | Rural |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Ratlam District | 204 | 257 | 185 | ... | ... | ... |
| Jaora Tahsil | 227 | 271 | 212 | 2 | 2 | 1 |
| Alot Tahsil | 197 | 229 | 191 | 3 | 3 | 3 |
| Sailana Tahsil | 115 | 153 | 141 | 4 | 4 | 4 |
| Ratlam Tahsil | 270 | 361 | 193 | 1 | 1 | 2 |

With 257 persons on an average square mile, Ratlam district is distinctly much more densely populated than the State as a whole which has a population density index of 190. In fact, Ratlam is one of the areas of high population concentrations in the State, there being only seven districts which have a higher population density than Ratlam. These are Indore, Jabalpur, Gwalior, Rewa, Ujjain, Bhind and Bilaspur districts. Durg, Raipur, Datia and Satna have closely comparing population densities with Ratlam district. Considering compactness of population in rural areas alone, the disparity between the State (165) and district averages becomes less. The pull of urban population in inflating the density of population also comes to the fore, because in respect of rural

population density Ratlam district comes down to the 17th rank in the State.

Within the district, considering total population, Ratlam tahsil emerges as the most densely populated tahsil, being almost two and half times as compactly populated as the most sparsely populated tahsil Sailana. Jaora and Alot tahsils, in the order stated, are also densely populated, both being much above the State average. At the other extreme is Sailana tahsil which is very sparsely populated. The pull of urban population in determining the total density is a very important factor because the density rankings of the tahsils follow the same order as the magnitudes of the urban components of population in each tahsil. This is otherwise obvious on a consideration of density of population in rural areas only. In the latter case, Jaora emerges as the most densely populated tahsil, relegating Ratlam, the most densely populated according to total population, to the second place. Alot tahsil which is nowhere near Ratlam tahsil in total density has almost the same rural population density as Ratlam tahsil. Thus as regards rural population only, Ratlam, Jaora and Alot tahsils have comparable population densities. Sailana remains the most sparsely populated tahsil even as regards rural population alone, though with reduced gap between it and the most densely populated tahsil. The low population density in Sailana tahsil is related to the hilly nature of the soil and to low proportion of net area cultivated to total area. In fact, as may be seen from table following that the density of population in rural areas has a direct proportionality with the net area sown in each tahsil.

TABLE

| Tahsil | Rural Density | Proportion of net sown area to total area. |
|---|---|---|
| 1 | 2 | 3 |
| Jaora | 212 | 58·4 |
| Alot | 191 | 56·0 |
| Sailana | 141 | 26·6 |
| Ratlam | 193 | 51·0 |

All the tahsils have maintained their relative rankings as regards density in 1961 and 1951.

**Discrepancy in area :**

Area of Ratlam district is given as 1,727 sq. miles by the Surveyor General, India against 1,878 sq. miles given by the Director of Land Records. The discrepancy is of the order of—8·7% of the Director of Land Record's area figure and is much too large to be explained by the differences in survey and computation methods employed by the two agencies.

**Changes in Territory since 1951 :**

During the decade in question, the only inter-district territorial change was a transfer of three villages involving an area of 4,885 acres and 2,175 population from the Alot tahsil to Khacharod tahsil of Ujjain district. No internal changes took place in the tahsilwise constitution of the district.

**Rural-Urban Classification of Population :**

The following table gives a break-up of the population according to residence in rural or urban areas for the district and for each tahsil.

TABLE

*100 Persons in the District and in Tahsil classified by Rural/Urban 1961-1951.*

| Unit | 1961 | | | 1951 | | |
|---|---|---|---|---|---|---|
| | Total | Rural | Urban | Total | Rural | Urban |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Ratlam District | 100 | 71·4 | 28·6 | 100 | 70·7 | 29·3 |
| Jaora Tahsil | 100 | 78·1 | 21·9 | 100 | 75·1 | 24·9 |
| Alot Tahsil | 100 | 83·2 | 16·8 | 100 | 81·5 | 18·5 |
| Sailana Tahsil | 100 | 92·0 | 8 0 | 100 | 89·0 | 11·0 |
| Ratlam Tahsil | 100 | 52·8 | 47·2 | 100 | 54·2 | 45·8 |

Almost three-tenth of Ratlam's population resides in urban areas—that is, its five towns—in 1961. Ratlam district is thus twice as urbanised as the State as a whole, the latter having an urban component of 14% only in its population. Among tahsils, Ratlam tahsil is very highly urbanised with almost half of its population living in urban area, that is Ratlam town. Jaora tahsil with more than a fifth of its population urban is next to Ratlam tahsil in the extent of urbanisation, while Alot with nearly one-sixth and Sailana with one-twelfth of their population residing in urban areas are among the backward tahsils in the matter of growth of urban population.

Since 1951 the district has suffered a slight loss in its urban component. Except Ratlam tahsil where urban proportion has increased since 1951, all other tahsils have registered conspicuous decreases in the proportions of their urban population. This is because of the tardy growth of the towns in the district, with the exception of course of Ratlam town. In fact, Sailana town has recorded a sizeable decrease (i. e. 3·8%) in population since 1951.

The number of towns in the district has not changed since 1951. There is no entirely rural tahsil in the district. Alot tahsil has two towns, Alot the tahsil headquarters town and Tal, while the remaining tahsils have one town each, which is the tahsil headquarters also. Ratlam, the biggest is a class II town with a population of 87,472 while the smallest Tal is a class V town with a population of 5,704. Jaora is a class III and Alot and Sailana are class V towns. The following statement shows the change in classification of the towns since 1901.

TABLE

*Changes in Classification* of Towns, 1901 to 1961.*

| S. No. | Unit. | Classification of towns in 1961 | 1951 | 1941 | 1931 | 1921 | 1911 | 1901 |
|---|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| 1 | Jaora | III | III | III | III | IV | IV | III |
| 2 | Alot | V | V | V | VI | ... | ... | ... |
| 3 | Tal | V | V | ... | ... | ... | ... | VI |
| 4 | Sailana | V | V | V | V | VI | VI | VI |
| 5 | Ratlam | II | II | III | III | III | III | III |

Till 1941, Ratlam town grew very slowly (in fact in 1901–11 its population declined), but during the last two decades it has grown fast, having almost doubled its 1941 population. Jaora town witnessed decreases in population successively at 1911 and 1921 censuses and thereafter though it has grown, the rate of growth has been exceedingly slow. The remaining class V towns have also shown stagnancy in population.

**Rural Population** :

Nearly seven-tenth of the district's population resides in rural areas, the proportion being as high as 92% in Sailana tahsil and as low as 53% in Ratlam tahsil. Ratlam district has a total of 1,074 villages, which account for only 1·4% of the State's total of villages. Evidently Ratlam contains much less than what a district on an average should have of the State's villages. Thirty-six villages in the district are uninhabited, constituting 3·4% of all villages. The frequency is thus much smaller than the State average frequency (8·4 %) of uninhabited villages. Of the district's total inhabited villages, the least populous Sailana alone contains more than two-fifth (42·6%). The distribution is more even in the remaining three tahsils : it is Jaora (22·9%), Alot (18·2%) and Ratlam (16·3%). The distribution of rural population among tahsils is : Jaora (32·1%), Alot (20·2%), Sailana (19·3%) and Ratlam (28·4%). Obviously this does not show any commensurability with distribution of inhabited villages among the tahsils.

It is of some interest to examine the relative frequency of villages of various population sizes, as also the relative populousness of each such class of villages. It is convenient to classify the villages into the following classes:—

| Population-size | Description |
|---|---|
| Below 200 | Very small |
| 200–499 | Small |
| 500–999 | Medium sized |
| 1,000–1,999 | Big |
| 2,000+ | Very big |

The following table gives distribution of inhabited villages according to these degrees of populousness:—

TABLE

*1,000 Villages Classified by Population-size.*

| Unit | All inhabited villages. | Frequency of Villages in Population-size: Below 200. | 200—499 | 500—999 | 1,000—1,999 | 2,000+ |
|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Ratlam District | 1,000 | 501 | 299 | 146 | 43 | 11 |
| Jaora Tahsil | 1,000 | 303 | 399 | 206 | 71 | 21 |
| Alot Tahsil | 1,000 | 365 | 397 | 190 | 48 | ... |
| Sailana Tahsil | 1,000 | 794 | 174 | 23 | 9 | ... |
| Ratlam Tashil | 1,000 | 166 | 373 | 337 | 89 | 35 |
| M. P. State. | 1,000 | 372 | 381 | 182 | 54 | 11 |

* The Classification is as below :
Class I 100,000 and above
Class II 50,000 to 99,999
Class III 20,000 to 49,999
Class IV 10,000 to 19,999
Class V 5,000 to 9,999
Class VI Below 5,000

Having half of the inhabited villages in the 'very small' category, and four-fifth in the two least populous classes, Ratlam is clearly a district of small villages. Smaller villages below 500 are distinctly more frequent in the district than in the State as a whole. The frequency of the more populous classes of villages is correspondingly smaller in the district than in the State as a whole.

The pattern of the distribution of villages does not show similarity between the district on one hand and the tahsils on the other. The latter do not show any similarity of pattern even among themselves. Villages of the smallest population-size constitute, as said earlier, half of all inhabited villages in the district. In Sailana tahsil 'very small' villages preponderate to the extent of nearly four-fifth of all inhabited villages in the tahsil, and form in that tahsil, the most numerous class of villages. In Ratlam tahsil on the other hand, very small villages number only one-sixth of all inhabited villages, and here they are relatively less numerous than even the medium-sized villages. In Jaora and Alot tahsils, very small villages are very much less frequent than they are in Sailana tahsil, but very much more frequent than they are in Ratlam tahsil.

Villages belonging to the small category account for nearly three-tenth of all villages in the district, being the second most numerous class of villages. Tashilwise frequency shows very close agreement in Jaora, Alot and Ratlam tahsils, where they account nearly for two-fifth of all inhabited villages and constitute the most numerous class of villages. In Sailana tahsil, on the other hand, small villages constitute less than one-fifth of all inhabited villages.

Combining the two bottom classes of villages together, it is observed that they constitute 97% of all inhabited villages of Sailana tahsil. At the other end stands Ratlam tahsil where villages with less than 500 population constitute a little more than half of all inhabited villages. Jaora and Alot tahsils stand in the centre with 70 and 76%respectively of their inhabited villages below 500 population.

Medium sized-villages account nearly for one-seventh of all villages in the district, and are the third most numerous class of villages. They are more or less equally frequent-being one fifth of all inhabited villages in each case-in Jaora and Alot tahsils. Their proportion is, however, much more in Ratlam tahsil-being one-third of all inhabited villages. In Sailana tahsil these villages make only 2% of all inhabited villages.

Bigger villages with more than 1,000 inhabitants each constitute only 5% of all inhabited villages in the district, the tahsil wise variation being between a minimum frequency of 0·9% in Sailana tahsil and the highest frequency of 12·4% in Ratlam tahsil.

**Population studied according to residence in villages of various population-sizes** :

It is also instructive to examine the distribution of the rural population living in villages of various degrees of populousness. This is done in the following table separately for the district and each tahsil. Comparative data for the State as a whole also are given:—

TABLE

*100 Persons Classified by residence in Villages of Specified Population-sizes.*

| District/ Tahsil | Total Population (Rural) | Population living in Villages with Population | | | | |
|---|---|---|---|---|---|---|
| | | Below 200 | 200—499 | 500—999 | 1,000—1,999 | 2,000+ |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Ratlam District | 1,000 | 157 | 291 | 303 | 165 | 84 |
| Jaora Tahsil | 1,000 | 83 | 287 | 308 | 200 | 122 |
| Alot Tahsil | 1,000 | 129 | 356 | 350 | 165 | ... |
| Sailana Tahsil | 1,000 | 481 | 337 | 101 | 81 | |
| Ratlam Tahsil | 1,000 | 39 | 219 | 400 | 183 | 159 |
| Madhya Pradesh State | 1,000 | 100 | 318 | 316 | 182 | 84 |

The table discloses a broad similarity of pattern as regards residence of rural population among the various population classes—between the district and the State as a whole. No such similarity of pattern is discernible between the district on one hand and the tahsils on the other, or between the tahsils *inter se*. Most populous in the district though second most populous in the State, are mediumsized villages, with 'small' villages in close pursuit. Each of these two classes of villages accommodates nearly three-tenth of the district's rural population. 'Big' villages (1,000-1,999) are almost equally populous as 'very small' villages, each class accounting for nearly one-sixth of the population. Least populous in the district are 'very big' villages accounting for the residence of only one-twelfth of the rural population.

Among individual tahsils, Ratlam tahsil shows distinctly very small preference of its rural population for residence in 'very small' villages. On the other hand, Sailana tahsil shows a great partiality of its rural population for residence in the 'very small' villages, with

almost half of its rural population living in them. In Jaora and Alot tahsils also 'very small' villages are much less preferred by the rural population for residence. In Alot tahsil also, though the proportion resident in 'very small' villages is more than thrice as big as the corresponding proportion in Ratlam tahsil still it is smaller than the district average proportion. The very wide range of variation of proportions resident in very small villages is interesting and calls for a study during the inter-censal period especially as regards the causes leading to it.

'Small' villages with population between 200 and 499 are almost twice as populous in the district as a whole as 'very small' villages. Tahsilwise the populousness of 'small' villages ranges from a minimum of 22% of the total rural population in case of Ratlam tahsil to a maximum of 36% in Alot tahsil. In the last mentioned tahsil, further, the 'small' villages are the most populous of all population classes of villages.

Combining the two least populous classes of villages together (i. e. villages with less than 500 inhabitants each), we are face to face with some interesting observations. In the western, mostly forested and hilly Sailana tahsil smaller villages with less than 500 population account for more than four-fifth of the rural population. It cannot be said, on the strength of the evidence available with us, as to why such a large proportion of villages in the Sailana tahsil prefer to be scattered in 'small' and 'very small' villages; but perhaps the 'lie' of the land has something to say. At the other extreme, as regards preference pattern of the rural population regarding residence in villages with varying degrees of populousness stands Ratlam tahsil where only a quarter of the rural population prefer to live in 'small' and 'very small' villages. Alot and Jaora tahsils stand in between these two extremes.

Medium-sized villages between 500 and 1,000 in population are the most populous class of villages in the district as a whole and in Jaora and Ratlam tahsils. In the last mentioned tahsil, these villages accommodate two-fifth of the rural population. In Alot tahsil, medium-sized villages are almost as populous as 'small' villages, but in Sailana tahsil the proportion of population resident in these villages is as small as 10%.

As is to be expected, Ratlam has a fairly large rural population resident in bigger villages with more than 1,000 population, the proportion being 34%. It is clearly pursued in this respect by Jaora tahsil which has 32% of its rural population resident in 'big' and 'very big' villages. At the extreme rung of the ladder as regards populousness of 'big' and 'very big' villages, stands Sailana tahsil which has less than one-twelfth of its rural population resident in bigger villages with more than 1,000 inhabitants each. In Alot tahsil, proportion of rural population resident in bigger villages is twice as large as the proportion in Sailana tahsil but half the proportion so resident in Jaora and Ratlam tahsil.

To sum up, Ratlam tahsil has a distinctly high preference for residence in medium-sized villages and bigger villages. On the other hand, Sailana tahsil shows a very high degree of populousness in smaller villages below 500 population. Alot and Jaora tahsils occupy intermediate positions in this respect, with Jaora being nearer to Ratlam and Alot to Sailana tahsil.

**Average Population per Village :**

A study of villages and rural population with reference to frequency of villages of various population sizes and of population resident in each size-class is invested with much more meaning if the average population to which villages in each class cluster is known. This is attempted in the following table which gives the average population per village in each population-class. Comparative figures for Indore division and Madhya Pradesh are also furnished.

TABLE

| Unit | All inhabited villages | Average proportion per village in village with population: Less than 200 | 200—500 | 500—1,000 | 1,000—2,000 | 2,000+ |
|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| Madhya Pradesh State | 394 | 106 | 329 | 685 | 1,323 | 2,880 |
| Indore Division | 409 | 109 | 329 | 683 | 1,335 | 2,777 |
| Ratlam District | 332 | 104 | 324 | 687 | 1,267 | 2,644 |
| Jaora Tahsil | 466 | 129 | 335 | 697 | 1,305 | 2,705 |
| Alot Tahsil | 368 | 130 | 330 | 676 | 1,280 | ... |
| Sailana Tahsil | 151 | 91 | 291 | 675 | 1,356 | ... |
| Ratlam Tahsil | 580 | 137 | 341 | 688 | 1,191 | 2,593 |

The table at once brings out the wide fluctuation in average population of a village in the district on the one hand and its tahsils on the other. Villages are the most populous, on an average in Ratlam tahsil, followed by Jaora tahsil. The very high frequency of very small villages in Sailana tahsil pulls down the average populousness per village in that tahsil to almost a fourth of that in Ratlam or one-third that in Jaora tahsil. It may also be noticed that villages in Ratlam and Jaora tahsils are, on an average, much more populous than in Madhya Pradesh or in Indore division whereas in Sailana and Alot tahsils they are much less populous. It is also interesting that the average sizes to which villages in each population-range cluster show remarkably close agreement in case of the district and tahsils on the one hand and State and division on the other.

**Census Houses and Households :**

At the time of houselisting-an operation which preceded census proper by about four or five months-Ratlam district had 134,260 census houses. 94·8% of these were occupied, while remaining 5·2% were returned vacant. 69·6% of all houses were returned as dwelling houses–65·7% as simple dwellings, 1·0% as shop-cum dwelling and 2·9% as workshop-cum-dwellings. Shops excluding eating houses accounted for 2·1%, factories and workshops 1·3%, schools etc. 0·3%, business houses and offices 0·3%, hostels and sarais etc. 0·3% and places of entertainment and community gathering 1·7% of all census houses. A little less than one-fifth (19·1%) of the census houses were returned merely as 'others.'

Table E–II of the Handbook gives tenure status of sample census households. It appears from this table that almost four-fifth (78·6%) lived in census houses of which they were owners. The proportion of owner households is as high as 94·9% in rural areas of the district, but in urban areas majority-59·9%–of the households live in rented dwellings. This fact clearly brings out the dominant role of migrant population in urban areas.

**Houses by Walls and Roof Materials :**

Table E–IV of the Handbook, again based on a 20% random (in the sense of random start only) sample of the households enumerated at the time of houselisting gives useful demographic data bearing on the living habits of the people. It gives us a distribution of households according to their residence in census houses with specified wall and roof-materials, separately for total, rural and urban areas of the district and each tahsil. The following statements, abstracted from that table give distribution of 100 census households in the district and in each tahsil according to their residence in houses with specified wall and roof materials.

TABLE

*Distribution of 100 Census Houses used by Wall material*
*Ratlam District, 1961.*

| S. No. | District/ Tahsil | | Grass, leaves, reeds or bamboo | Timber | Mud | Unburnt bricks | Burnt bricks | C. I. sheets or other metal sheets | Stone | Cement concrete | All other material | Total |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 2 | | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| | Ratlam District | R | 3·5 | 6·2 | 76·3 | 5·4 | 1·8 | 0·1 | 5·9 | 0·1 | 0·7 | 100 |
| | | U | 0·2 | 0·1 | 18·7 | 39·3 | 36·9 | 0·6 | 2·9 | 1·1 | 0·2 | 100 |

| | | U | 0·3 | 0·1 | 6·2 | 44·4 | 42·4 | 0·9 | 4·1 | 1·6 | Neg· | 100 |

## TABLE

*Distribution of 100 Census Houses used by Roof material*
*Ratlam District 1961.*

| S. No. | District/ Tahsil | | Grass, leaves, reeds, thatch and bamboo | Tiles, slates, shingle | Corrugated iron, zinc or other metal sheets | Asbestos cement sheets | Brick and lime | Concrete and stone slabs | All other material | Total |
|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 2 | | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| | Ratlam District | R | 16·5 | 58·3 | 20·3 | 0·2 | 0·1 | 0·3 | 4·3 | 100 |
| | | U | 5·9 | 26·6 | 53·1 | 3·1 | 1·6 | 8·4 | 1·3 | 100 |
| 1 | Jaora Tahsil | R | 16·3 | 54·4 | 21·6 | 0·1 | 0·2 | 0·1 | 7·3 | 100 |
| | | U | 3·2 | 45·8 | 47·5 | ... | ... | 3·3 | 0·2 | 100 |
| 2 | Alot Tahsil | R | 17·3 | 73·4 | 5·7 | 0·2 | 0·1 | 0·3 | 3 0 | 100 |
| | | U | 0·3 | 73·1 | 12·7 | 0·4 | 0·2 | 1·8 | 11·5 | 100 |
| 3 | Sailana Tahsil | R | 19·7 | 75·4 | 4·4 | 0·2 | | 0·3 | ... | 100 |
| | | U | 0·4 | 38·8 | 57·8 | ... | 0·8 | 2·2 | ... | 100 |
| 4 | Ratlam Tahsil | R | 14·4 | 41·7 | 38·7 | 0·1 | 0·2 | 0·3 | 4·6 | 100 |
| | | U | 7·9 | 12·4 | 60·9 | 4·8 | 2·4 | 11·4 | 0·2 | 100 |

It appears from the first of these statements that houses with mud-walls preponderate in the district in rural areas accounting for the residence of more than three-fourth of the census households. Among tahsils, all tahsils except Sailana exhibit the overwhelming preference of mud as a wall material: but in the last mentioned tahsil mud-walled houses accommodate less than one-third of the rural households. In even Sailana tahsil however mud-walled houses remain the most frequent category of houses with timber-walled houses in very close pursuit. Timber, stone and unburnt bricks are three other, more or less equally preferred, wall materials in rural areas of the district as a whole. These are followed by grass, leaves, reeds or bamboo, walls made of these accounting for residence of 3·5% of the rural households. Houses with walls made of burnt bricks have a small frequency of 1·8%,while houses with walls made of other materials have more or less negligible frequency for residential purposes.

As regards rural areas of tahsils, all except Sailana follow more or less the district pattern. In Sailana tahsil mud-walled and timber-walled houses are almost equally frequent followed by stone-walled houses which account for the residence of one-sixth of the rural households of the tahsil. In rural areas of Sailana tahsil houses with walls made of grass, leaves, reeds or babmoo also have considerable frequency, with nearly one-seventh of the households living in them. Ratlam tahsil (rural) also has a significant proportion (8·9%) of households living in walls made of stone. In all other tahsils, stone-walled houses have very small-even negligible—frequencies. The higher frequency of houses with walls of stone, timber, grass, leaves etc. in Sailana tahsil indicates the role of easy availability of these materials in the mountains and woods of that tahsil.

The urban areas have a different pattern of distribution of houses with various types of walls. Houses with walls of unburnt bricks are the most frequent here, accounting for the residence of nearly two-fifth of the urban households. Pacca dwellings with walls of burnt bricks are almost equally frequent. Houses with mud-walls come next in numerousness in urban areas with between one-fifth and one-sixth of the households living in them. In Jaora tahsil urban almost half the households live in mud-walled houses, while in Alot urban the proportion is nearly two-fifth. Pacca houses with burnt bricks have higher frequencies only in urban Ratlam and Jaora tahsils. Houses with walls made of unburnt bricks have higher frequencies in Sailana, Alot and Ratlam tahsils.

As regards roofing, the pattern discloses dissimilarity as between rural and urban areas. Roofs covered with tiles, slates and shingle dominate the scene in the rural areas with almost three-fifth of the households living in such houses. In urban areas, majority—more than half–of the households live in houses covered with corrugated metal sheets. In rural areas, houses covered with metal sheets come next in frequency accounting for one-fifth of the households. In urban areas, on the other hand, second most numerous are houses covered with tiles, slates or shingle, accommodating more than one-fourth of the households. In both rural and urban areas, however houses with roofs either of corrugated metal sheets or of tiles account for almost four-fifth of the households.

Houses with roofs covered with grass, leaves, thatch or bamboo are also quite numerous in rural areas, accounting for one-sixth of all rural households. In urban areas, next frequent are houses with roofs of concrete or stone slabs, followed by houses with grass or thatch roofs and houses with asbestos cement sheets.

Among tahsilwise peculiarities, we may notice that in Alot tahsil, rural as well as urban, and in

Sailana tahsil rural, houses with tiled roofs account for the residence of almost three-fourth of the households. Tile-roofed houses have high frequencies in Jaora tahsil (both rural and urban) and in rural Ratlam and Sailana tahsils. Corrugated metal sheets as a roofing material have a distinct preference in urban areas of Ratlam, Sailana and Jaora tahsils and in rural areas of Ratlam tahsil.

**Distribution of Households by number of Rooms Occupied.**

Table E-V of the Handbook classifies households in the district by number of members and by number of rooms occupied by each household. While appreciating this table, it should be remembered that (i) the population dealt with in it refers to the houselisting operation and that *(ii) it is based on a 20% random*- in the sense of a random start-sample of all households enumerated at houselisting. It appears from table E—V that at the time of house-listing (August-September 1960) Ratlam district had 18,804 sample households living in 35,773 rooms.

Half (49·9%) of the sample households in the district lived in congested dwellings with one room-an all purpose room-each. In rural areas, almost three-fifth (57·7%) of the sample households lived in these congested single-room dwellings; the urban areas were somewhat better with only three-tenth (31·6%) of the sample households living in congested single-room dwellings. Individually among the tahsils, Sailana seems to be the worst from the standpoint of living congestion with as many as 58% of its sample households living in one-room dwellings.

Scarcely better from the point of view of living congestion are about three-tenth (29·3%) of the sample households who live in dwellings having two rooms each. Thus almost four-fifth of the households in the district live in extremely over-crowded dwellings with one or two rooms per dwelling. Though the statistical data before us does not throw any light on the floor area available per person it should not be difficult *in the light of our knowledge of rural dwellings* that such area should be meagre in the extreme.

**Variation in Population : 1901-61**

The statement below gives an account of the growth of Ratlam district's population since 1901, separately for total, rural and urban areas. Due allowance has been made in the statement for the Sunel Tappa enclosure of Bhanpura tahsil which has, after reorganisation, been transferred to Rajasthan State.

*Population variation 1901-61 showing decennial percentage variation.*

| Year | Ratlam District | | | Madhya Pradesh | | |
|---|---|---|---|---|---|---|
| | Total | Rural | Urban | Total | Rural | Urban |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| 1901-11 | + 2·5 | + 14·7 | — 27·5 | +15·3 | +17·8 | — 10·9 |
| 1911-21 | + 0·2 | — 0·2 | + 1·8 | — 1·4 | — 2·3 | + 10·9 |
| 1921-31 | + 18·5 | + 14·2 | + 34·8 | +11·4 | +10·5 | + 23·0 |
| 1931-41 | + 15·4 | + 14·6 | + 18·0 | +12·3 | +10·5 | + 32·8 |
| 1941-51 | + 13·9 | + 6·2 | + 37·9 | + 8·7 | + 6·0 | + 33·2 |
| 1951-61 | + 26·7 | + 28 1 | + 23·3 | +24·2 | +21·0 | + 47·7 |
| 1901-31 | + 21·7 | + 30·8 | — 0·5 | +26·7 | +27·1 | + 21·5 |
| 1931-61 | + 66·5 | + 55·9 | +100·5 | +51·6 | +41·7 | +161·2 |
| 1901-61 | +102·6 | + 103·9 | + 99·5 | +92·0 | +80·1 | +217·4 |

During the sixty years under review population has more than doubled in Ratlam district, the growth being somewhat higher in rural than in urban areas. In Madhya Pradesh as a whole, growth of population has been slightly slower. Generally during first half of the sixty year period, particularly during the first two decades, growth of population was slower in the district than in the State as a whole. But in the latter half of the sixty year, the district out-did the State as a whole in population growth in each decade. It is worthwhile to consider in brief the salient features of decadal variations in each decade of the sixty years period 1901-61.

**Decade 1901-11 :**

The census of 1901 followed on the heels of a very severe famine which had severely mauled the population of Central India Agency West, especially the hilly tracts (like those of Sailana tahsil in Ratlam district), causing heavy mortality among the old and the young; that is, at the two extremes of life. Naturally the population should have shown a steady recovery in the following decade. In the mainly hilly tahsil Sailana this in fact was the case, the increase in population in erstwhile Sailana State being of the order of + 10·7%*, the increase being shared partly by return of Bhil emigrants of the last famine, and partly owing to past famine rebound. The population of the erstwhile Jaora State had, during 1901-11, decreased by about 1% (the decrease in the part of the State in present Ratlam district must have been greater because the decrease of 1% in the whole

* Census Report (1911) of Sailana State, page 3.

State includes increases of 14 and 8 percent respectively in Tal and Sanjit Parganahs which are mostly out of the present Ratlam district) mainly because of the plague epidemic which had mauled Joara town off and on for seven years.* The erstwhile Ratlam State had a decadent population history since 1891. The decrease in the whole State was of the order of 5·1%, principally owing to visitation of plague in the urban areas. The rural population of the State had shown an increase of 12%.† Alot tahsil of former Dewas Senior State which makes part of the present Alot tahsil had increased substantially by 26%. The cumulative effect of these increases and decreases was a low rise of 2·5% during the decade, analysed into a sizeable increase of 15% in the rural population and a much bigger decrease of 27·5% in urban population.

**Decade 1911-21**

This decade is described as "one of general prosperity on the whole", though "the harvest of 1918–19 was a failure in Ratlam, Sailana and the west generally"††. Epidemic of plague took some toll of life during the decade, but the real havoc was caused by the fulminating influenza epidemic of 1918–19. The variation of population in different parts of the district differed widely. Jaora town lost 5% while Jaora and Tal tahsils gained by 4 and 5 percent respectively in population, inspite of influenza. Piploda State increased by 9%, Alot pargana of former Dewas Senior State lost by 5%, while Ratlam State gained by 4%. The increase in the last case was attributed to sojourn of pilgrims *enroute* to Ujjain Simhastha fair, even though plague and influenza respectively in 1917 and 1918 played havoc in the State.£ Former Sailana State showed a decrease of 5% during the decade, owing again to influenza, but also because most people of former Biplank (now in Ratlam tahsil) and Raoti tahsils had left for Dhar and Gwalior States in connection with wheat harvest and did not return till after the final count.££

The combined effect of these variable conditions of growth is reflected in a low overall increase of 0·2% in the district comparing actually with a small decrease (1·4%) in the State as a whole.

**Decade 1921—31 :**

During this post-influenza decade Ratlam district showed an increase of 19% comparing with a much smaller increase of 11% in case of State as a whole. The decade was characterised as a normal one from the points of view of agriculture and public health. The increase was not uniform in the various former States comprising the present Ratlam district. It was highest, respectively 30 and 26 percent in former Sailana and Ratlam States. Part of the growth in Ratlam was due to the growth of Ratlam town which contained more than one-third of the State's population. **The Central India Agency Census Report ascribed the unusually high growth rates of Bajna Tahsil of Ratlam State and Raoti and Biplank tahsils of former Sailana State to the very high proportion of Bhil population in these areas, obviously suggesting the high fecundity among Bhils. However, part of this large increase may also have been owing to return of harvesting labourers of the previous decade. The rate of growth was slower in parts of the State coming from the former Dewas and Jaora States. Sailana town registered an increase of 44% during the decade.

**Decade 1931—41 :**

In this decade, the district recorded an increase of 15% over its 1931 population, comparing with a somewhat smaller State average of 12%. There was not much difference in rural/urban rates of increase. Obviously the world wide economic depression of the early thirties and the second world war during late thirties had no adverse effect on the growth of population in these States.

**1941—51 Decade :**

During this decade also the district grew much faster than the State as a whole, the growth–alike in the State as a whole and in the district–being very much higher in the urban than in the rural areas. The high increase in urban and low increase in rural population during the decade was in great measure due to the upgrading of Tal to the status of a town in 1951 and to the high increases attained by Ratlam town. The decade 1941–51 will go down as an epoch-making decade in the history of Indian Nation. It began in the midst of the second world war, whose termination followed two years of immense political activity and disturbances in the country leading to its partition and independence from British rule, as also the integration of the former princely States. The closing years of the decade were noted for beginning of the nation–building efforts a prelude to the launching of the First Five Year Plan. In spite of the rising costs and all round shortages of food and other commodities, the population increased sizeably. In Ratlam district the increase was highest in Ratlam tahsil (18%) owing to the growth of Ratlam town (41%). Jaora, Sailana and Alot were slower to grow.

**The last Decade :**

The decade just gone by will go down as a very remarkable decade in the demographic history of the State as well as the district, for what has lately come to be known as it its "population explosion". Ratlam district has grown by 27% during the decade as against 24% in case of the State as a whole and the increase marks an all time high in the known census history of the district during the past sixty years. Another remarkable feature of this growth is that it is faster in the rural than in the urban areas, showing the welcome effects of such public health programmes as the Natio-

nal Malaria Eradication Programme, the B.C.G. Campaign, of near eradication of such pests and epidemics as plague and cholera, and of famines. Some amount of improvement in economic prosperity of the population is also indicated.

The following statement gives tahsilwise variation of population during the last decade separately for total, rural and urban populations.

*Population Variation during 1951-61 by Tahsils*

| Unit | Percentage Variation | | |
|---|---|---|---|
| | Total | Rural | Urban |
| 1 | 2 | 3 | 4 |
| Ratlam District | +26·7 | +28·1 | +23·3 |
| Jaora Tahsil | +19·4 | +24·1 | + 5·2 |
| Alot Tahsil | +19·7 | +23·0 | + 5·6 |
| Sailana Tahsil | +32·8 | +37·3 | — 3·8 |
| Ratlam Tahsil | +34·1 | +30·8 | +38·0 |

This statement at once fixes attention on the very high rates of growth attained by Sailana and Ratlam tahsils. In the last mentioned tahsil Ratlam town has grown very fast, but the rural population of the tahsil also has shown remarkable increase.

The Sailana tahsil, which has grown by about one-third of its 1951 population, the increase analyses into higher rural increase of 37% and a decrease of 4% in urban population. It may be mentioned that high rates of increase have characterised the predominantly Bhil tracts of West Nimar, Jhabua and Dhar districts; and Sailana tahsil too being a Bhil tract shares this character. How far these higher increases in the Bhil tracts are due to the result of the supposed prolificity of the Bhils is not known. The possibility of migration from the adjoining tribal tracts of Gujarat also cannot be ruled out.

As compared with Ratlam and Sailana tahsils the mutually comparable increases attained by the northern Jaora and Alot tahsils look very small, the percentage being in case of both tahsils below even the State average. In both these tahsils, the growth of rural population approximates more closely to the district average, and in both again, the urban populations have moved up very slowly. The very low rate of increase of urban population in Jaora and Alot tahsils is also an interesting feature needing investigation. So also is the decrease in the population of Sailana town.

**Age-composition :**

Age-structure is a very important element in the demographic study of a population, giving information on such vital aspects as the proportion of persons in working age, proportion of workers in school-going age, very old and infirm persons, proportion of infants and very young children etc. which is useful in formulating plans to fight unemployment, provision of schooling facilities, provision of old age pensions and other reliefs, provision of child welfare centres etc. Apart from this utilitarian aspect, demographic data on age-structure highlights the trends in population growth, thereby helping in the evolution of a sound population policy. Hence, the Census Handbook gives population-age-data by quin-quennial age-groups. The following statement is derived from these tables :

TABLE

*Distribution of 100 persons by age and sex*

| Age Group | Ratlam District | | | M. P. State | | | Sex Ratio | |
|---|---|---|---|---|---|---|---|---|
| | P | M | F | P | M | F | Ratlam district | M. P. State |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |

| A. N. S. | 0·08 | 0·04 | 0·04 | 0·05 | 0·03 | 0·02 | 1,121 | 898 |

For a proper appreciation of this table, it may be pointed out that the data presented in it are based on ages actually returned at enumeration, without 'milling' them through such 'purificatory' statistical processes as 'smoothing' or 'graduating'. The quality of age-returns in the Indian census has rightly been the subject of much adverse criticism as being subject to gross inaccuracies arising mainly from the more or less universal ignorance of age on the part of the respondents. This ignorance is more particularly noticed in rural areas, where, strictly speaking, no returns of age are made by the respondents, but estimates of age are made by the enumerator himself or by some better knowing neighbour of the respondent, or less commonly, by the respondent himself. The general tendency, whoever is the person making the estimate, is to do so in round numbers, frequently in decenniums or in quinquenniums; and much less frequently in even rather than in odd ages. The age-data therefore suffer from an age-bias arising from the idiosyncracies of the enumerator or the respondent. This distorting effect is picturised in a single-year age-graph of the population which will show peaks at round ages ending in 0 or 5 and in even rather than odd digits and troughs at the intermediate ages. In order to minimise (complete elimination, of course, is impossible) the distorting effects of age-heaping, a common device is to group the ages in quin-quennial or other suitable groups, such that one preferred age is included in each group. This preliminary grouping affords a good first approximation towards the correct picture and certainly makes the data more presentable. But it does not need an expert eye to be able to say that this preliminary or crude smoothing, has not eliminated completely even glaring distortions. If ages are correctly reported and tabulated, then in a closed population (i. e. where effects of migration are inoperative) not sensibly affected by such sweeping mortalities as are caused during wars, famines epidemics and pestilences, frequency in successive age-groups (of equal widths, of course) should go on decreasing more or less in a smooth progression. A look at the foregoing table shows that there are more persons in ages 20-24 than in 15-19 or in 60-64 than in 55-59, obviously a result of attraction of the preferred ages 20 and 60. Also the drop from one age-group to the next higher age-group is almost static in some cases and steep in others. Hence, it is safer for a preliminary, quick examination to further group the quin-quennial age-groups into four broad age-groups. For obvious reasons the broad age-groups selected for this second approximation towards a better picture are 0–14, 15–34 35–59 and 60+, which have the added advantage of corresponding broadly with childhood and juvenility, youth, middle age and old age respectively. † In these age-groups, it may reasonably be presumed that angularities further cancel out mutually to a considerable extent.

The table shows that infants and children form the most numerous section of the district's population, accounting for more than two in five. The age-group roughly corresponding to adolescence and youth (15-34) is naturally the next most populous, making almost one-third of the district's population. The overwhelmingly youthful character of the population is at once manifest if we group these two broad age-groups because three-fourth of the population is below 35 years in age. Applying a somewhat rule-of-the-thumb measure due to Sundburg* to this population, we find that it is a progressive population with potentialities of accelerated growth; a none-too-happy prospect, albeit, in the background of the population 'explosion' of last decade.

The middle-aged segment of population (35-59) is much narrower, accounting for slightly less than one-fifth of the population. Persons at the upper extreme in the age-ladder i. e. those who have completed sixty years or more of their life are the least frequent. These add to roughly 1 in 21 of the population. It may also be noticed that fall in frequency between successive broad age-groups becomes steeper as one reaches age-intervals of higher order.

The foregoing table also focusses attention on the general similarity in age-structures of the State and district populations. However notice deserves to be taken of the fact that the proportion of youth and children is distinctly higher in the district than in the State as a whole. The district has also a slight excess of youthful persons as compared to the State as a whole. On the other hand, the two older age-groups are relatively less numerous in the district than in the State as a whole. It is however difficult to assign much significance to these discrepancies as regards the three older age -groups because they may be due to age-misreporting. As regards the youngest age-group (0-14), the proportions do tell the tale of higher levels of birth as well as of reduced mortality in the district as compared with the State as a whole. It is worthwhile in this context to examine changes that have taken place in the age-composition of the district since 1951. The following table accordingly presents a break-up of the district's population by broad age-groups at the last and the 1951 Censuses.

*Distribution by broad age-groups, 1951, 1961.*

| Age-group | Population distribution | |
|---|---|---|
| | 1951 Based on 10% sample | 1961 |
| 1 | 2 | 3 |
| All ages | 100 | 100 |
| 0—14 | 38·67 | 42·76 |
| 15—34 | 34·90 | 32·89 |
| 35—59 | 21·27 | 19·44 |
| 60+ | 4·72 | 4·83 |
| A.N.S. | 0·44 | 0·08 |

† For a fuller discussion of patterns of digital preference, the chapter on age and sex in the general report of the State may be referred to.

* According to Sundburg, the proportion of population in the youngest age-group (0-14) should be in the neighbourhood of 40%, 33% and 20% in respectively a progressive, stationery or regressive population.

It is necessary to mention that 1951 figures in this table are based on a 10% random sample of the population of that Census, while the 1961 figures are based on total population. In comparing the two sets of figures, therefore, we shall tacitly be assuming that the 1951 sample was representative of the total population, an assumption justified when the sample is large and random.

It is at once noticed that the intervening decade has contributed to a sizeable broadening of the youngest age-group, the 1961 proportion being higher than its 1951 counterpart by 4 points. This has obviously been at the cost of the two middle broad age-groups i. e. those corresponding to youth and middle age. The proportion of the former has gone down by 2 points and of the latter 1·8 points. Old age has registered a very small, but significant (in view of the general broadening of the population base) increase by 0·1 point. The rather high increase in the proportion of children below 15 years of age arises mainly from addition of children born during the decade (age-group 0–9) to the survivors of age-cohort 0-4 of 1951. This high increase is the result of the twin factors of higher birth-rate and lower infant mortality levels. In the absence, however, of reliable vital statistics data, it is not possible to isolate and quantify the roles played by these two causes.

Some idea of the fertility levels can however be formed by comparing the crude* birth rates estimated from population aged '0' at the two censuses. At the 1951 census, birth-rate estimated from sample population aged '0' comes to 27 while the birth rate for 1961 population is 36. The birth rate thus has improved by about 25% since 1951; the cause of its being low in 1951 being presumably depletion in the ranks of women of childbearing ages in that census owing to the influenza mortality of 1918-19 (this, as we said earlier, was sex and age-selective and the incidence was heavier on women).

The decrease in the proportions of youth and middle age do not necessarily indicate higher mortality levels in these age-groups but is to a large extent due to the general widening of the population base on account of more than proportionate addition of children below 10 years in age. However, it would seem that expectancy of life has not registered noticeable increase in these two age-groups.

**Sex Ratio :**

Sex Ratio or the number of females for a given number (1,000 as regards the Census) of males is an important demographic variable of the population. Common people generally believe, a belief, perhaps based on their expectation that males and females exist (or, should exist) in equal numbers in the population. Quite contrary to this belief, the number of females relative to males varies not only from one geographical region to another, or from rural to urban areas but also from one point of time to another or from one ethnic group to another. As an illustration of the geographical variation of sex-ratio, it may be stated that the sex-ratio has the lowest value of 839 in Morena district in extreme north of the State and the highest value of 1,037 in Raipur district in the extreme east of the State. It is possible to divide the State in more or less contiguous belts of high, medium and low sex-ratios. Besides geography, there are many more (interrelated) factors : social, cultural, dietary etc. reacting on the sex-ratio at a given time and place.

Ratlam district lies in the Malwa plateau, a tract noted for low sex-ratio at least for the past sixty years. There are 941 females in the district per thousand males as against a higher sex-ratio 953 in the State as a whole. The sex-ratio is not uniformly distributed but shows sizeable tahsilwise variations. It has the highest value of 970 in the predominantly Bhil, hilly, south-western Sailana tahsil and the lowest value of 924 in the south-eastern Ratlam tahsil. Jaora and Alot tahsils have respectively 943 and 953 females per thousand males in their populations.

An important factor influencing sex-ratio in a particular region is the degree of its urbanisation. It is a matter of common observation that urban areas have comparatively higher degree of masculinity than rural areas. The reason for this behaviour is not difficult to see. Sex-ratio imbalance is mostly created by migrational elements in the population and it is well-known that the direction of this migration is from rural to urban. The imbalance arises because to begin with, this migration affects mainly the male population and there is considerable time-lag before the females join the male migrants. This one-way traffic naturally increases masculinity in the urban and feminity in the rural population. Rural-urban differences in sex-ratio for the district and for each tahsil separately are brought out in the sub-joined statement.

*Sex-ratio by Total, Rural and Urban, 1961*

| Unit | Sex-ratio | | |
|---|---|---|---|
| | Total | Rural | Urban |
| 1 | 2 | 3 | 4 |
| Ratlam District | 941 | 958 | 900 |
| Jaora Tahsil | 943 | 952 | 913 |
| Alot Tahsil | 953 | 954 | 951 |
| Sailana Tahsil | 970 | 972 | 943 |
| Ratlam Tahsil | 924 | 961 | 886 |

This table broadly endorses the observations made regarding sex-ratio variation between rural and urban areas. It may however be noticed that sex-ratio has more or less the same values in rural and urban areas in Alot tahsil, suggesting that even though treated as a

* The estimates are too small (i) because no note is taken of children born and dying during the year preceding enumeration and (ii) Population at the end, rather than middle of the year is taken as base in computing the rate. Since these are common to both the rates, the relative levels are still comparable.

town Alot has so far not acquired an important urban characteristic—namely higher proportion of migrant population.

A look at the primary census abstract of the tahsil would show that Alot tahsil (urban) has still a large proportion more—than 25%—in agricultural working categories and about 40% in agriculture and household industry. This also confirms that the urban population of Alot tahsil has not acquired the important urban characteristic of a non-agricultural economy.

Sex-ratio variation over time is studied in the following statement which gives sex-ratios at the past six censuses separately for total, rural and urban areas. For analytic comparison, corresponding State figures are also juxtaposed.

*Changes in the proportion of sexes, 1901-61*

| | Females per 1,000 males | | | | | |
|---|---|---|---|---|---|---|
| | Ratlam District | | | Madhya Pradesh | | |
| | Total | Rural | Urban | Total | Rural | Urban |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
| 1901 | N.A. | N.A. | 983 | 990 | 995 | 937 |
| 1911 | 961 | 961 | 960 | 986 | 991 | 913 |
| 1921 | 948 | 957 | 912 | 974 | 982 | 878 |
| 1931 | 946 | 965 | 887 | 973 | 983 | 872 |
| 1941 | 957 | 970 | 916 | 970 | 980 | 882 |
| 1951 | 966 | 979 | 937 | 967 | 975 | 907 |
| 1961 | 941 | 958 | 900 | 953 | 970 | 856 |

The table high-lights the basic dissimilarities in the pattern of sex-ratio behaviour over time in the district and in the State. In the latter, the trend is one of continuously increasing—though with varying rates—masculinity from census to census. Such consistently unidirectional variation is missing in the district. It started with a much smaller sex-ratio than that of the State as a whole in 1911 (for 1901 sex-ratio for the district's total and rural populations is not available). During 1911-21, it decreased by 13, perhaps owing to sex-selective mortality in the influenza epidemic. In 1921-31, as in case of the State as a whole, the sex-ratio showed very small downward variation, but whereas this behaviour continued in the State in the 1931-41 decade, in case of Ratlam district this latter decade saw a significant improvement in the level of sex-ratio. In the next decade again, whereas the State maintained a more or less static sex-ratio level, the district again witnessed a sizeable decrease in masculinity; so much so that it had almost the same sex-ratio as the state as a whole in 1951. The causes of this upward trend in sex-ratio during 1931-51 are not ascertainable on the basis of available data. During the last decade, there was a sizeable reduction in sex-ratio both in the district and the State, steeper in the former than in the latter.

**Sex-ratio by age :**

It is a matter of common observation that the sex-wise population shows conspicuous disparities by age. Causes of this variation in sex-ratio according to age are partly biological and partly depend on social factors. The variation of sex-ratio according to age is shown in the following statement. Age-ratio in the first year of life is of particular interest as it throws light on sex-wise differentials in natality and mortality at the time of and soon after birth. Accordingly sex-ratio for the first year of life is separately presented in the statement. Again, ages for the first fifteen years being comparatively fresh in the memory of the respondents are returned with greater accuracy than returns of higher ages. Hence sex-ratio for the first three quinquenniums of life is presented separately. Save this, sex-ratio by broad age-groups only has been presented in the statement. Even then remarks made earlier regarding inaccuracy of age-data should be borne in mind while appreciating this statement.

*Sex-ratio by age*

| Age | Sex-Ratio | |
|---|---|---|
| | Ratlam District | Madhya Pradesh |
| 1 | 2 | 3 |
| 0 | 995 | 990 |
| 0–4 | 996 | 996 |
| 5–9 | 955 | 966 |
| 10–14 | 864 | 847 |
| *0–14* | *947* | *947* |
| *15–34* | *954* | *959* |
| *35–59* | *867* | *905* |
| *60+* | *1,337* | *1,190* |

Save the oldest age-group which, for reasons discussed elsewhere in this note, discloses a sizeable preponderance of female of the species, sex-ratio is high at the beginning of life. At age '0', and even in the early age-group '0—4', there is a near parity of males and females, the masculine excess being as low as 5 in 1,000 in them. The sex-ratio at age '0' does not however represent sex-ratio at birth. This latter, it is now almost universally acknowledged, is conspicuously sex-selective, the favoured sex being the male. This seems to follow, in case of Ratlam district, from Table 6B. 1 in Part II of the Handbook which shows more male than female births in the years 1952 and 1956 to 1960 out of the ten years (1951—60) for which vital statistics were available.*

At the present state of our knowledge, nature's initial partiality for the male sex belongs to the realm of the unknown, all artificial attempts to control, or predict within reasonable degree of certainty, the sex of the child in the embryo having proved futile. It is also almost an established fact that the lead taken by the male child at birth is not only neutralised but converted into a deficit in the first few months of life by the reverse process of sex-selective male mortality. To this phenomenon which is true for the country as a whole, a biological basis is sought to be given by advancing the hypothesis of organic superiority of the females. If this hypothesis as to the organic superiority of the female of the specie is tenable, then the observed reduction in the ranks of females in later childhood years can only be explained. On the tenuous basis of a widespread social attitude of neglect of the female child and of bestowing greater care on the male child resulting in greater mortality in case of the former. In any case, the trend towards a decreasing sex-ratio with increasing age is manifest in the childhood period of life. The apparently high feminine dificit in the closing (10-14) quin-quennium of childhood may also be ascribed, partly to sex-selective faulty age-returns, but have mainly to be attributed to higher female mortality.

As to broad age-groups, sex-ratio in the first two periods of life i. e. childhood and youth does not show significant variation. There is, however, a perceptible drop in the feminine proportion in middle-age, which may not *intoto* be attributed to fault in age-returns. The inference is irresistible that in the middle-age as a whole, incidence of mortality is greater on females than on males. This is not difficult to account for either. After the initial reverses in later childhood, the sturdier female survivors match well their male counterparts and rough even the onslaughts of early and improvident maternity. No doubt, in the latter maternity period and in late middle age, feminine mortality should be high owing to elimination of the relatively weaker elements of their population, but this is perhaps matched by an equally heavy incidence on the male. The sudden shooting up of the sex-ratio in old-age is also explained on this basis; because purged of its weaker elements in late middle life, the more virile female survivors outlive their male counterparts.

**Marital status by age**

Importance of data on marital status by age has increased enormously in the background of the population explosion of the last decade. This is so because all women in the fertile ages (15–44) are potential mothers, and if no artificial curbs are employed on natality, it shall directly vary with the proportion of married females in this age-group. Sociological investigations have shown that power of women to bear children is highest in the ages 19—24, but thereafter it progressively decreases. Hence, if a large number of women in these ages are kept out of reproductive activity by late marriage, widowhood or separation, the birth rate is likely to show a declining trend. Hence the importance of marital status returns. Besides, marital status data by age also throws light on various other important social phenomena like early and infant marriages, widowhood, incidence of bachelor-hood and spinsters etc. The following table presents the marital status data of Ratlam district's population by quinquennial and broad age-groups.

* It is to be remembered that registration of births and deaths in the district is grossly incomplete. However, since the incompleteness is presumably random the figures may be used to indicate the general trend.

## TABLE

*Ratlam Disrtct's population by quinquenial and broad age-groups.*

| Age-groups | Total | | Marital status | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | | | Never Married | | Married | | Widowed | | Divorced or separated | | Unspecified Status | |
| | M | F | M | F | M | F | M | F | M | F | M | F |

Salient features of this table with requisite comments are presented below.

(i) Universality of marriage in the population particularly among females is brought out from the very low proportion of never-married in case of males and near absence in case of females, in ages beyond 20. It may, however, be noticed with some interest that the proportion of never-married males rarely falls below 3% in any of the quinquennial age-groups and is in the neighbourhood of 3% in the highest residuary age-group 60+. The proportion cannot perhaps be attributed to inaccuracies in age-returns because it has negligible values in case of females, it being rather unthinkable that this type of age-inaccuracy should show any sex-selectivity. Perhaps these confirmed bachelors in all the age-groups suffer from some sort of physical disability or incapacity rendering them unfit for marriage. If this premise were correct, it would follow that incidence of physical disability is conspicuously less-even negligible—among women. In any case the data do underline the need of some sort of demographic investigation on the real causes responsible for the sizeable incidence of celibacy among males even in the highest of ages.

(ii) Infant or very early marriages of children below 10 years is seemingly not prevalent in the district as shown by the centpercent returns of never married in the ages 0–9. However, the figures do not represent a 100% true picture in this age-group because tabulation of marital status was done only for population of 10 years and more. This practical course was adopted under the generaly valid assumption that no marriages took place among tender aged children below 10 years. However the sizeable returns of married in the later childhood age, 10–14 show that the omission has perhaps introduced small statistical inaccuracy in the maritalstatus returns of Ratlam district.

(iii) Pre-puberty child marriages (ages 10–14) are prevalent in the district on a small scale in case of boys but on a sizeable scale in case of females. In case of the latter, roughly two-fifth are returned as married in the ages 10–14, while in case of boys incidence of married is between one-sixth and one-seventh of the male population of the age-group. In the broader age-group (0–14) of children and juveniles roughly 1 among every 25 males and one among every eleven females are shown as having entered matrimony. Corresponding proportions (for sample population) for 1951 populations were 7% and 13% respectively in case of males and females.

It would appear that incidence of pre-puberty and child marriages has registered slight decreases during the inter-censal period 1951-60. We may not draw any conclusion from this because part (if not all) of this

decrease may also be due to omission to tabulate age-data below 10 years in 1961 and below 5 years in 1951.

(iv) A little more than two-fifth among males and almost nine-tenth among females in the age-group 15-19 (marking adolescence and the early youth period) are retuned as married. In the next higher age-group only one-fourth of the boys manage to remain out of wedlock, but almost all the girls in this age-group are married. Incidence of bachelorhood among males remains as high as 9% even in the late youth period 25-29 and 5% in 30-34. The evidence of these figures tells us that girls in the district start getting married with some frequency in the ages 10-14, very few of them remain never-married in the ages 15-19 and almost all are married before they attain 25 years. In case of boys, however, marriages start taking place with some frequency in the ages 15-19, but most of them are married in the ages 20-24, and 25-29.

(v) In the context of the population 'explosion' of the last decade and the difficult economic and food situation through which the country is passing, effective checks on natality are imperative. One method of doing this is to propagate and mobilise public opinion in favour of late marriages. The evidence shows that early marriages form the rule in the district, there being evidence of scant respect for the law of the land which prohibits marriages of girls below 14 and boys below 18 years of age.

(vi) Incidence of widowhood is 3·7%among the males and 10·9% among females population. The incidence is of negligble dimensions in ages below 30 years. In the age-group 15–34 representing youth roughly 2% of the boys and 3% of the girls are returned as widowers or widows. But incidence of widowhood starts asssuming considerable dimension with increasing age-thereafter. In early middle-age (35-39), 4·8% of males and 11·7% of females are returned as widowed. The proportions of widowers and widows increase to 16·7% and 56·9% respectively in the closing quinquennium(55-59)of middle age. This sex-selective incidence of widowed state with advancing age is explained, among other things, by the wide disparity of 5 to 8 years in the ages of husbands and wives and the increasing age-specific death-rates. Beyond 60 years of age, 28 8% of males have to put up with the loss of their spouses. But among women of these ages, as many as four-fifth have to share this misfortune ( or, cynically speaking, fortune ).

Incidentally this evidence also corroborates the observations regarding feminine longevity once they cross the crucial effects of frequent child-births and improvident maternity.

**Literacy and Education :**

With a literacy percentage of 21·39 as against the State average of 17·13%, Ratlam is among the foremost districts in the field of literacy and education. In the national context, however, the district is yet to catch up with the all-India literacy average of 24%. It ranks tenth in the State in descending order of literacy percentage, the districts above it, with their respective percentages of literacy being: Indore (38·2%); Jabalpur (28·6%); Gwalior (27·9%); East Nimar (24·5%); Ujjain (23·4%); Hoshangabad (22·9%); Mandsaur (22·4%); Narsimhapur (21·6%); and Sehore (21·5%).

Distribution of literacy within the district does not show uniform distribution among the tahsils, but is marked by remarkable concentration in the souh-eastern Ratlam tahsil and by very low levels in the south-western, hilly and predominantly tribal Sailana tahsil. The spatial variation of literacy is presented in the following statement by rural-urban and sex-wise break-up.

*Percentage of literacy spearately for the sexes for the district and for each tahsil by total, rural and urban areas, 1961*

| Unit | Literacy percentage | | | | | | | | | Rank | |
|---|---|---|---|---|---|---|---|---|---|---|---|
| | Total | | | Rural | | | Urban | | | Total | Rural |
| | P | M | F | P | M | F | P | M | F | P | P |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 |
| Ratlam District | 21·4 | 31·9 | 10·3 | 12·6 | 21·8 | 3·1 | 43·2 | 56·3 | 28·8 | — | — |
| Jaora Tahsil | 20·5 | 32·3 | 7·9 | 16·4 | 27·9 | 4·3 | 35·0 | 47·9 | 20·8 | 2 | 1 |
| Alot Tahsil | 14·4 | 23·9 | 4·5 | 10·5 | 18·7 | 1·9 | 34·0 | 49·5 | 17·7 | 3 | 3 |
| Sailana Tahsil | 6·9 | 10·4 | 3·4 | 4·0 | 6·3 | 1·7 | 40·3 | 57·1 | 22·4 | 4 | 4 |
| Ratlam Tahsil | 30·9 | 43·3 | 17·5 | 15·8 | 27·5 | 3·5 | 47·9 | 60·2 | 33·9 | 1 | 2 |

The table at once highlights the lop-sided distribution of literacy among tahsils. At one end is Ratlam tahsil which has almost one-third of its population among the category of literate and educated. Jaora tahsil which comes next in the size of its literate and educated population is however much below Ratlam tahsil, being even below the district average in education and literacy. It is followed by north-eastern Alot tahsil; this tahsil has less than half the literacy percentage of Ratlam tahsil. At the other end of the scale is Sailana tahsil, whose literacy percentage is less than one-fourth the percentage of Ratlam tahsil and less than half of Alot tahsil.

The preceding table suggests one immediate cause

of literacy variation : namely the size of urban component in the population. If we recollect the tahsil-wise urban proportions considered in earlier portions of this note, it will be seen that literacy percentage shows a positive correlation with size of urban population.

The explanation for this variation is (i) greater need and awareness of importance of education in urban areas as helps to better employment and (ii) greater facilities of education in these areas.

Variation of literacy among rural areas only also shows considerable unevenness. It may be noted with interest that Jaora tahsil scores over Ratlam in rural literacy, though the difference is not much. There is a considerable drop even in rural literacy in case of Alot tahsil, and Sailana the most backward even in rural literacy has a literacy rate which is slightly less than one-fourth the literacy rate of Jaora tahsil. Reasons for low levels of literacy in Sailana tahsil are (i) high proportion of tribal population in that tahsil, who are known to be unresponsive to education (ii) hilly nature of the tahsil with attendant difficulties in inter-village accessibility (iii) large proportion-82% of rural population is resident in small villages with less than 500 population. As against this, in Jaora and Ratlam tahsils, villages are open and easily accessible, besides being of larger size. The latter type of villages have a greater susceptibility towards urbanisation and awareness of the need for education. It is not possible to account for low education levels in rural areas of Alot tahsil. The following table gives data on schooling facilities in the district separately for each tahsil.

TABLE

| District/Tahsil | Total No. of Primary Schools | No. of inhabited villages served per school | Area served per school (Sq. miles) | Total No. of Scholars | No. of scholars per school | Literacy Percentage | |
|---|---|---|---|---|---|---|---|
| | | | | | | Total | Rural |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| Ratlam District | 411 | 2·5 | 4·6 | 20,337 | 49 | 21·4 | 12·6 |
| 1 Jaora Tahsil | 170 | 1·4 | 3·1 | 8,209 | 48 | 20·5 | 16·4 |
| 2 Alot Tahsil | 78 | 2·4 | 4·7 | 2,627 | 34 | 14·4 | 10·5 |
| 3 Sailana Tahsil | 45 | 9·8 | 10·5 | 1,629 | 36 | 6·9 | 4·0 |
| 4 Ratlam Tahsil | 118 | 1·4 | 4·3 | 7,872 | 67 | 30·9 | 15·8 |

This table convincingly brings out the high degree of negative correlation between literacy (particularly rural) and number of villages served per school and area served per school on the one hand; and the somewhat less conspicuously discernible positive correlation between literacy percentage and number of scholars per school on the other. It is at once manifest that Sailana has the lowest literacy percentage because there a school serves the highest number of villages and area in the district. Correspondingly Jaora and Ratlam tahsils have higher literacy percentages because each of them has one school for smaller number of villages and area.

**Progress of literacy since 1951 :**

In 1951, Ratlam district had a literacy percentage of 14·0.* The district has thus increased its literacy level by 50% since 1951. This remarkable achievement has been mainly due to the expansion of educational institutions during the intercensal decade.

As shown by Table 5·1 in part II of the Handbook, there were 174 primary schools in 1951, and the number has more than doubled in 1961. The number of scholars also has registered corresponding increase.

**Levels of education :**

The percentage 21·4 includes the totality of persons returned as literate and educated and is a very crude index of the educational quality of the population. Particularly because the census test of literacy was very liberal requiring the simple ability to read and write. In order to judge the true quality of the population *vis a vis* education it is necessary to know the educational levels possessed by its members. In Ratlam district, more than four-fifth (81·2%) of those returned as literate and educated were mere literates without possessing any educational level. These might indeed have joined a primary school but did not stay there long enough to pass the Primary school examination. In the State as a whole, proportion of mere literates is smaller—71·9%. Thus, even though the district has proportionately more literate and educated in its population than the State, the latter has relatively greater proportion of those possessing recognised educational levels.

11·9% of the literate and educated persons in the district (as against 21·9% in the State as a whole) have been returned as possessing 'Primary or junior basic' level of education. Some of these might have studied in a middle or high school, but they did not pass the matriculation examination.

* Based on figures given in Table D-VII of 1951 District Census Handbook.

TABLE

| Literate | Literate without educational level | Primary or Junior Basic | Matriculation and above |
|---|---|---|---|
| 1 | 2 | 3 | 4 |
| 103,431 | 83,966 | 12,333 | 7,132 |
| 100·0 | 81·2 | 11·9 | 6·9 |

**Mother Tongues :**

Mother tongue returns are to be found in Table C-V of the Handbook. In all, fifty-seven languages or dialects have been returned as mother-tongues in the district. This obviously large number of speeches would suggest that the district is a veritable babel of tongues. Even a cursory examination of Table C–V will however expose the utter invalidity of such an impression. Thirty-seven mother-tongues, each having less than 100 speakers, are really not of much importance in the linguistic pattern of the district, serving more to seemingly accentuate the linguistic multiplicity.

Another seven speeches have a small speakership of more than 100 but less than 200 persons each, three between 300 and 500 and two between 500 and 1,000. Thus only eight out of the fifty-seven languages returned from the district can lay claims to 1,000 or more speakers each. The linguistic multiplicity gets further resolved when we consider that out of these eight speeches, only four, namely Hindi, Malvi, Bhili & Urdu account for all but 3·5% of the population. In other words, fifty-three mother-tongues claim only 3·5% of the population as speakers, representing perhaps the effect of migration on the linguistic pattern of the district. The eight speeches, each having a speakership of more than 1,000 persons, together with the proportion of speakers of each are : Hindi (61·95%); Malvi (20·07%); Bhili (7·76%); Urdu (6·76%); Gujarati (0·77%); Marathi (0·71%); Sindhi (0·62%); and Punjabi (0·23%).

Hindi has been returned as the most widely spoken mother-tongue in the district, claiming a little more than three-fifth of the population as speakers. Speakers of Hindi as mother-tongue are slightly more numerous (62·99% of the rural population) in rural areas, and correspondingly less numerous (59·35% of the urban population) in urban areas.

It is also the most widely spoken mother-tongue even in rural areas of all the tahsils except Sailana. In the last mentioned tashil *Bhili* claims the largest speakership in rural areas, Hindi getting relegated to the second position.

The second most widely spoken mother-tongue in the district is Malvi, accounting for almost one-fifth of the population as its speakers (24·70% in rural and 9·22% in urban areas). It is the second most widely spoken speech in rural areas of Ratlam, Alot and Jaora tahsils but gets relegated to the third place in the Sailana tahsil. About Malvi, which has been classed on philological considerations as a dialect of Rajasthani, the linguist of the Registrar General India's office observes : "The headquarters of Malvi are in the Malwa country round Indore, but it extends over a wide tract. To the east it reaches Bhopal where it meets Bundeli and to the west, it is stopped by the Bhil dialects spoken in the hills south of Udaipur. A peculiar form of it, which is much mixed with Marwari forms is called Rangri and is spoken by the Rajputs."

Bhili with 7·76% of the population speaking it as mother tongue (all in rural areas) is the next most widely spoken dialect in the district. Speakers of this speech are concentrated overwhelmingly (to the extent of 98% of total Bhili speakers) in rural Sailana tahsil, which also is the habitat of the Bhils of which it is the mother-tongue. G. A. Grierson regards Bhili "as a bridge between Gujarati and Rajasthani and remarks that Bhili might with propriety be looked upon as an eastern dialect of Gujarati". It is classified under the central group of the Inner-Sub-branch.

Urdu, with a speakership of 6·76% is fourth as regards numerousness of its speakers. Speakers of urdu are rare in rural areas where it is the mother-tongue only of 0·75% of the population. On the other hand in the urban areas, speakers of Urdu as mother-tongue count more than one-fifth (21·74%) of the urban population. The explanation is the concentration of the Muslim population—who have generally returned Urdu as mother-tongue-in the urban areas. In rural areas, the population of urdu speakers shows some concentration in Jaora and Alot tahsils.

Besides the four languages mentioned above, speakers of Marathi, Gujarati and Sindhi also claim a respectable speakership in the district. These are concentrated mainly in the urban areas.

The table inset below compares some of the mother-tongue returns for 1951 and 1961 Censuses.

| Mother-tongue | Population 1951 | Population 1961 | Percentage increase (+) Decrease (—) |
|---|---|---|---|
| 1 | 2 | 3 | 4 |
| 1 Hindi | 285,269 | 299,539 | + 5·0% |
| 2 Malvi | 27,531 | 98,005 | + 256·0% |
| 3 Bhili | 41,345 | 37,531 | — 9·2% |
| 4 Urdu | 16,031 | 32,677 | + 103·8% |
| 5 Gujarati | 4,918 | 3,715 | — 24·5% |
| 6 Marathi | 1,613 | 3,443 | + 113·5% |
| 7 Sindhi | 2,294 | 2,984 | + 30·1% |
| 8 Marwari | 1,240 | 667 | — 46·2% |

The changes in the first four major mothertongues are indeed very sweeping. Malvi speakers have multiplied more than 2½ times since 1951, whereas the speakers of Hindi as mother-tongue have tended to remain more or less static. Speakers of the Bhili dialect have registered a substantial decrease during the intercensal

decade. Speakers of Urdu have on the other hand registered an impressive increase of more than 100%. Whereas the slow rate of increase in the population of Hindi speakers can partly be explained by the unusually high increase in the Malvi and Urdu speakers, the decrease in the number of Bhili speakers remains intriguingly unexplained. As regards the less widely spoken languages, while Marathi and Sindhi have improved their speakership substantially, Gujarati and Marwari have been returned with less number of speakers.

**Religion :**

Religious composition of the population of the district is presented in the following table for 1951 and 1961, separately for total, rural and urban areas.

*Religionwise population 1951—1961*

| District: Total/Rural/ Urban | | Total population | Hindus | Muslims | Sikhs | Jains | Christians | Buddhists | Others |
|---|---|---|---|---|---|---|---|---|---|
| 1 | | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| 1951 | Total | 100 | 85·44 | 11·17 | 0·06 | 2·85 | 0·46 | ... | 0 02 |
| | Rural | 100 | 95·63 | 3·24 | 0·02 | 0·99 | 0·12 | ... | ... |
| | Urban | 100 | 61·00 | 30·21 | 0·16 | 7·29 | 1·26 | ... | 0 08 |
| 1961 | Total | 100 | 86·40 | 9·84 | 0·12 | 3·13 | 0·49 | Neg. | 0·02 |
| | Rural | 100 | 95·60 | 3·22 | 0·03 | 1·03 | 0·12 | ... | ... |
| | Urban | 100 | 63·46 | 26·35 | 0·35 | 8·36 | 1·41 | 0·01 | 0·06 |

As shown by this Table, a very large majority (roughly 6 out of every 7) of the population follow Hindu religion in 1961. In rural areas, Hindus are even more numerous making 19 out of every 20 persons of the rural population, but are correspondingly less numerous in urban areas where they constitute roughly between three-fifth and two-third of the population. Next in numerical strength are followers of the Muslim faith, who constitute roughly one-tenth of the total population. Being an urban community, Muslims shrink their proportion to 3·2% in the rural areas, while in urban areas their population makes more than one-fourth of the total population.

Jainism with only 3% of the population among its followers, is the third most popular religion in the district. As in case of Muslims, Jains too are more frequent in urban areas where they make 7% of the population. In rural areas, Jain make only 1% of the population. Christians and Sikhs are other religious groups having recognisable strength, dwelling mostly in urban areas. Followers of other religions have negligible population in the district.

Compared to their 1951 population, Hindus, Jains, Christians and Sikhs have improved their proportion in the general population. On the other hand, Muslims have decreased in relative strength.

**Scheduled Castes and Scheduled Tribes :**

Though no specific criterion seem to have been laid down for classifying a tribe or caste as scheduled, yet generally 'Scheduled' castes and tribes represent the educationally, economically and even culturally backward sections of the society. As far as 1961 Census is concerned, Scheduled Castes and Scheduled tribes are those found in the President's Order "The Scheduled Castes and Scheduled Tribes Lists (Modification) Order, 1956", promulgated in 1956 just after the reorganisation of the States. It may be pointed out that whereas scheduling of Castes extends uniformly over the whole territorial jurisdiction of the district, that of some of the tribes is confined to some of the tahsils. Thus, Gond, Korku and Seharia tribes are notified as Scheduled throughout the district, but scheduling in case of Bhils and Bhilalas (including Barela, Patelia and other sub-tribes) extends only to Sailana tahsil. Thus, as regards the population of these tribes, the district figures do not include members, if any, of these tribes liylng in Ratlam, Jaora and Alot tahsils.

25·51%or just more than a quarter of the district's population belongs to the 'Scheduled' category-Castes and tribes being more or less equally numerous. Tahsil-wise, the scheduled proportion varies from a minimum of 10·60% in case of Ratlam tahsil to a maximum of 82·58 % in case of Sailana tahsil. Jaora and Alot tahsils have respectively 18·96% and 20·28% of their population in the scheduled category. The very high value of the proportion in Sailana tahsil is due to concentration of tribal population of the district in that tahsil.

**Scheduled Castes :**

Out of a total of twenty-five castes notified as 'Scheduled' for the district, as many as twenty only were returned at the 1961 Census.

The five castes which have not been returned from the district, though scheduled, are Bedia, Bhanumati, Chidar, Dhed and Zamral. Out of the twenty castes returned at the 1961 Census in the district, four namely, Dom, Kotwal, Mang or Mang Garodi and Sansi have been returned with less than 50 persons each; four, Mahar, Pardhi, Kanjar and Meghwal have populations between 100 and 200 each; and two namely Dhanuk and Barhar or Basod between 200 and 300 each.

Four Scheduled castes, to wit, Banchada, Bargunda, Khatik and Pasi have populations between 600 and 1,000 each. Thus only six out of the twenty scheduled castes enumerated in the district have respectable representation, each contributing more than 1,000 persons to the population of scheduled castes in the district. Even of these six, three, namely Chamar (including sub-castes), Balai and Bagri or Bagdi are really numerous, the three together accounting for 83% of the district's scheduled caste population. The more numerous castes together with the percentage they bear to the total scheduled caste population of the district are Chamar etc. (35·6%); Balai (31·1%); Bagri or Bagdi (16·2%); Bhangi or Mehtar (6·5%); Nat, Kalbelia or Sapera (2·5%); Koli or Kori (1·6%). It may be noticed that these six more numerous scheduled castes account for 93·5% of the total scheduled caste population of the district.

Scheduled castes account roughly for one-seventh (13·5%) of the district's population. Tahsilwise proportions show considerable variation. They are concentrated to some extent in the Alot and Jaora tahsils, where they make respectively 20·3 and 18·9 percent respectively of the general population. In the preponderatingly tribal Sailana tahsil, scheduled castes make only 2·6% of the population while in Ratlam tahsil they constitute a little more than one-tenth (10·5%) of the general population.

Scheduled castes are slightly more at home in rural areas than the population at large as will be clear from the fact that while only 78% of the general population lives in rural areas,in case of scheduled castes, the rural proportion is 81%of their population.

With only 8·3 % of the scheduled caste population returned as literate and educated, they are certainly very backward as compared to the general population which has a high literacy percentage of 21·4%. Among scheduled caste males alone, literacy proportion is as high as 15·2% (31·9% in the general male population), but it assumes the distressingly low value of 1·1% among scheduled caste females (females in the general population have a literacy percentage of 10·3%).

Since the scheduled castes do not show any marked concentration in rural areas, it seems that reason for low literacy levels in the scheduled castes is their general apathy towards education. This would also seem to follow from the fact that even in rural and urban areas separately, scheduled caste population compares ingloriously with the general population. Thus in rural scheduled castes population, percentage of literacy is 5·7 (as against 12·6% in the general population);while in the urban areas, the scheduled caste literacy percentage of 19·3 compares with a much higher percentage of 43·2% in the general population.

The educational picture as regards various levels of education also is generally disheartening in case of scheduled castes. Almost 95% of the literate and educated among scheduled castes cannot advance claim to any educational levels (in the general population the proportion has a smaller value of 81·2%). Even primary and junior basic education level includes only 4·6% of the scheduled caste literate population the corresponding proportion for general population being 11·9% . Matriculates and above accounted for only 0·5% of the scheduled caste literate and educated. No woman among scheduled castes in rural areas was returned with any educational level, while in the urban areas, only six women among scheduled castes could lay pretension to primary or junior basic level of education. Only three males among scheduled castes, one each in Bhangi, Chamar (etc ) and Koli or Kori castes were returned with university degrees.

Scheduled castes have returned a working proportion of 56·2%, against a smaller proportion 48·2% in the general population, showing that more persons have to work among scheduled castes than among the population at large. Almost three-fourth (76·1%) of the scheduled caste workers work in the two agricultural working categories, about half (51·9%) as cultivators on their own account, and about half that number (24·2%) as agricultural labourers. These compare with higher proportion (64·2%) of cultivators and a lower proportion (10·0%) of agricultural labourers in the general population, apparently bringing out the backwardness of the scheduled castes' economy. In fact scheduled castes account for almost two-fifth (38·2%)of the district's working force in agricultural labour. The weak basis of their agricultural economy becomes clearer when it is seen that more than one-fifth (21·2%) of the sample cultivating (rural) households among scheduled castes own fragmentary and small holdings of less than 2·5 acres each, while a slightly larger proportion (23·2%) cultivate small holdings between 2·5 and 5 acres each.

Thus between two-fifth and half of the cultivating scheduled caste households work on uneconomic holdings of less than 5 acres each. Another about one-fifth (18·9%)of the rural cultivating scheduled caste households do so on somewhat bigger, but still perhaps not lucrative, holdings of 5 to 7·5 acres each. Thus, cumulatively speaking, almost two-third (63·3%) of the cultivating rural sample households work on small, generally operationally uneconomic holdings of less than 7·5 acres.

'Household Industry' claims the next highest proportion of the castes' working force—roughly 1 in 12—with 'other services' claiming almost one sixteenth of the workers in close pursuit. Manufacturing industries in category V claim 3·1% of the scheduled caste workers. Other categories of workers have scant appeal for the scheduled caste workers. The following table gives a classification of 100 workers in scheduled castes generally and in some of the more numerous scheduled castes by the nine categories of workers.

TABLE

*Categorywise distribution of Scheduled Caste workers, Ratlam District*

| Name of Scheduled Caste | Total workers | WORKERS IN I | II | III | IV | V | VI | VII | VIII | IX | Total Population | Total Workers | Non-workers |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 |
| All Scheduled Castes | 100 | 51·85 | 24·24 | 1·78 | 8·50 | 3·08 | 1·98 | 0·49 | 1·59 | 6·49 | 100 | 56·17 | 43·83 |
| 1 Balai | 100 | 67·80 | 24·89 | 1·53 | 0·63 | 0·95 | 0·51 | 0·12 | 0·49 | 3·08 | 100 | 62·25 | 37·75 |
| 2 Bagri | 100 | 64·23 | 23·63 | 2·26 | 8·03 | 0·21 | 0·16 | 0·10 | 0·03 | 1·35 | 100 | 59·78 | 40·22 |
| 3 Bhangi | 100 | 19·47 | 18·12 | 2·10 | 1·30 | 0·80 | 0·50 | 0·05 | 9·81 | 47·85 | 100 | 46·82 | 53·18 |
| 4 Chamar | 100 | 42·49 | 26·02 | 1·41 | 14·97 | 4·66 | 4·47 | 0·33 | 0·69 | 4·96 | 100 | 53·95 | 46·05 |
| 5 Khatik | 100 | 11·51 | 8·44 | 1·02 | 26·09 | 18·16 | 0·51 | 6·91 | 1·53 | 25·83 | 100 | 42·32 | 57·68 |
| 6 Koli or Kori | 100 | 1·45 | 0·49 | 3·63 | 3·39 | 46·73 | 6·78 | 0·97 | 15·74 | 20·82 | 100 | 40·25 | 59·75 |
| 7 Pasi | 100 | 5·64 | 2·26 | ... | 0·75 | 9·40 | 15·41 | 3·01 | 55·64 | 7·89 | 100 | 34·28 | 65·72 |
| 8 Nat | 100 | 18·91 | 54·26 | 2·37 | 6·15 | 5·67 | 0·35 | 7·92 | ... | 4·37 | 100 | 52·81 | 47·19 |

**Chamar etc.**

Constituting almost 36% of the district's scheduled caste population, this is the most numerous among scheduled castes. Other names for the caste given in the President's notification are Bairva, Bhambi, Jatav, Mochi or Regar.

For want of local information it is not known how many (if any) of these names are in use for the caste in Ratlam district. About one-fourth (25·2%) of their population has been returned from urban areas. The caste is met with sparingly in the tribal Sailana tahsil (rural). It shows slight concentration in rural Jaora and Alot tahsils.

9·3% of the Chamar population is literate and educated which is slightly higher than literacy percentage in Scheduled castes generally. Though traditionally Chamars were skinners of leather, and make leather footwear, their economy is now principally dependent on agriculture, more than two-thirds of their workers being principally engaged in the agricultural working categories. Household industry accounts for the principal work of next largest group of workers. The household industry pursued by the caste is its traditional industry of currying, tanning and finishing of hides and skins (minor group 310) and making of leather footwear (minor group 311),with the latter employing more than twice as many workers as the former. Categories V (Manufacturing other than house-hold industry), VI (Construction), and IX (Other services) also employ sizeable, mutually comparable, numbers of Chamar workers.

**Balai** :

Numerically this is the second most important scheduled caste in the district, accounting for a little less than one-third of the total scheduled castes population of the district. The caste seems to be more at home in the rural areas, with only 6% of its members having been counted in urban areas (against 22% in scheduled castes generally). In rural areas alone, the caste is returned more or less wholly from Jaora, Alot and Ratlam tahsils. Percentage of literacy in the caste is 7·3, comparing with 8·3% in scheduled castes generally and 21·4% in the general population.

Balais have been described in Census literature as a typical caste of central and southern Malwa and of the regions to the south of the Vindhyas which have received immigrants from Malwa. According to the 1931 Census Superintendent of erstwhile Holkar State, "Chamars and Balais appear to have been members of one community, which later on was divided into two sections ".[1]

According to the same authority, the Balais enjoyed a superior social status because they did not follow the socially unclean occupation of skinning dead animals. In erstwhile Holkar State, the caste contributed most of the village messengers and watchmen.[2]

62% of the caste's population has been returned as economically active. Predominant occupation is agriculture with 93% of the workers principally working in agriculture (68% as cultivators and 25% as agricultural labourers). Categories IX and III account for another 4% of the caste's workers. Other working categories have scarcely any appeal for the Balai workers.

**Bagri or Bagdi** :

This, the third most numerous scheduled caste in the district, accounts for almost one-sixth of the total scheduled caste population. The caste is apparently not at home in urban areas which contain less than 1% of its population. Writing about the caste, the

1. Holkar State (Census Report, 1931) page 250.
2. The Indore State Gazetteer, 1931, (Page 95)

1931 Central India Agency Report * says : "Bagris or Moghias are a well-known tribe of thieves and dacoits. A brave race of men, they were employed as foot-soldiers for purposes of protection in that period of weak rule and anarchy in Central India. They have now been weaned away from their habits and settled in different parts of Central India as agriculturists". The Report also gives a story purporting to explain their alleged Rajput origin as well as the names Bagri or Monghia of the caste. Indore State Gazetteer (page 87) gives a similar story for Moghias.

The caste is very backward with only 2·4% of literate and educated in the population. Agriculture, absorbing almost nine-tenth of the caste working force, is the mainstay of its economy. Household Industry also has sizeble participation but the nature of the caste's household industry is not known.

**Bhangi or Mehtar :**

This, the fourth most numerous scheduled caste in the district, is the well-known caste of traditional sweepers and scavengers. Unlike other scheduled castes which are concentrated in the rural areas, the Bhangis are almost equally numerous in the rural and urban areas. This concentration of the caste to the extent of its population in urban areas is principally due to the latter areas standing in greater need of the services of the caste. This also explanins the somewhat higher incidence of literacy (13·1%) in the caste. As is to be expected, almost half of the Bhangi workers are in 'Other services', presumably in 'Sweeping and scavenging'. About 37·5% of the caste's workers are principally employed in agriculture, almost equally distributed as cultivators and agricultural labourers. Transport, Storage and communications employing almost one-tenth of the caste's workers is also important sector of economy. Presumably most of these are employed as sweepers and scavengers in the railway transport. Other working categories are unimportant in the caste's economy.

**Nat, Kalbelia or Sapera :**

Castes returned under these appellations account for 2·5% of the scheduled caste population. The caste has been almost exclusively returned from rural areas, only 11 persons (out of 1,613) having been counted in urban areas. As regards geographical distribution, the caste shows better representation in rural areas of Alot and Jaora tahsils. With only 2·3% of the population returned as literate and educated, the caste is very much lagging behind in the march of education. According to 1931 Holkar State Census Report, the Nats are a "wandering caste of acrobats". In the district however most of them seem to have settled down to agriculture as appears from 73% of their workers being in agriculture, with labourers in agriculture outnumbring cultivators by almost 3 to 1. Trade and Commerce, household industry, manufacturing other than household industry and 'other services' are other important categories from the point of view of economic participation.

Besides the aforesaid more numerous castes, 1,026 'Koli or Kori' were returned from the district, mainly from its urban areas. Khatik and Pasi which are next in numerousness also show concentration in the urban areas. Perhaps this concentration in urban areas explains the high incidence of literacy in these castes, namely : 24·8% in 'Koli or Kori', 18·2% in Khatik, and 21·5% in Pasi. All these scheduled castes share a non-agricultural economy. More than half of the Pasi workers have been returned in 'transport, storage and communication,' while a little less than half of the 'Koli or Kori' workers are in manufacturing other than household industry'. The Khatik have almost a quarter each of their working force in 'household industry' and 'other services'.

Banchada, described as a caste of wandering musicians in the 1931 Holkar State Census Report are concentrated mainly in rural areas of Jaora Tahsil. They number 658, all but 2 in rural areas. Bargunda, numbering 695 (250 in urban areas), are described as a "wandering tribe of Dravidian origin", speaking Bargundi a Dravidian dialect and engaged in the making of baskets, mats, brooms etc. from woody material.

**Scheduled Tribes :**

Roughly one-eighth (12·0%) of the district's population belongs to scheduled tribes. The tribes are very much ill-at-ease in urban areas which have returned less than 0·3% of their population. Though as many as four tribes (treating Bhil and Bhilala as a single tribe) have been notified as scheduled in the district, one alone i.e. 'Bhil and Bhilala' account for more than 99% of the scheduled tribe population. This tribe, as indicated earlier, is scheduled only in Sailana tahsil and it is not known whether it inhabits the other tahsils also. Gond, Korku and Seharia are the three tribes scheduled throughout the district, but having negligibly small population. These tribes have not been returned at all from Sailana tahsil. The last mentioned tahsil has a scheduled tribal component of four-fifth (80·0%) of its population, consisting entirely of 'Bhil or Bhilala'. Proportion of scheduled tribes is less than 0·1% in the remaining three tahsils (0·04% in Jaora, 0·01% in Alot and 0·09% in Ratlam tahsil).

In 1951, the district had a scheduled tribal population of 41,768. The percentage increase has been 39% during the decade, which is almost 1½ times as high as the proportionate increase in the district's general poulation during the decade, but is very near the proportionate increase (37%) in the rural population of Sailana tahsil during the decade. It is therefore possible to correlate the high proportionate increase in Sailana tahsil with the high increase in tribal population of the district, that is, high increase in the population of Bhil tribe. Other districts like Khargone and Dhar which have considerable Bhil population have also recorded high decadal increases in their populations.

* Opp. cit. Page 227.

**Bhil :**

Figures against Bhil tribe in the Handbook purport to include population of the related sub-tribes *viz.*Barela, Bhilala, Patelia, etc. also which have been bracketted with the main tribe Bhil in the Constitutional Notification. However in Ratlam district, or to be precise in Sailana tahsil, the population against Bhil and other sub-tribes pertains to only those who have returned themselves as Bhil. No sub-tribe of the Bhil referred to in the Notification has been returned from the district This may be contrasted with the returns of Khargone district where the sub-tribes Bhilala and Barel have outnumbered the main tribe Bhil in an effort perhaps at social climbing. Besides Ratlam district, Bhil (i. e. those who have returned themselves only as Bhils and not under the name of a sub-tribe) tribe is concentrated in the neighbouring Jhabua and Dhar districts and in West Nimar district all in the western extremity of the State. Ratlam account for slightly more than one-tenth of the State's Bhil (proper) population.

The name Bhil is supposed to have been derived from the Dravidian word for a *bow*. Sir J. Malcolm thinks (Central India, vol. I, page 519) that the Bhils have emigrated from Udaipur and Jodhpur to their present habitats. It is difficult to say whether they are autochthones or not. 122 Bhil septs have been recorded by Venkatachar in his Report of 1931 Census of Central India Agency.

The Bhils usually live in dispersed habitations in huts of wattle and daub surrounded by a bamboo fence, each standing by itself on high ground. Adult marriages seem to be the rule, marriages of girls below 14 being 3·5 percent of the population of girls in age-group 0-14. Marriage by capture once used to be common, relics thereof being still discernible in the institution of Bhagoria hat in West Nimar district. Widow remarriage is permitted.

The language spoken by Bhils is known as Bhili.

The Bhils are very backward educationally, with only 1·3% of their population returned as literate and educated. Women, with a literacy percentage of 0·12 are particularly deficient in education. In males alone, incidence of literacy is to the extent of 2·5% . As regards levels of education, the situation is still more depressing with all but 94·6% of the literate and educated population possessing no educational levels at all. 5 % of the literate and educated possess the primary or junior basic level, while a tiny proportion 0·4% claims to have crossed matriculation level.

About half (50·9%) of the Bhils have been returned as workers, which is slightly higher than the proportion (48·2%) for the population at large. Economy is overwhelmingly agricultural with 98 % of the workers principally following agricultural pursuits: 96% being cultivators and 2% being agricultural labourers. The very high proportion of cultivators in their own right and the very low proportion of agricultural labourers are interesting aspects of Bhil agriculture.

**Land use pattern :**

Classification and categorisation of land according to use has an important bearing upon the economic and demographic aspects. This classification of land is done by the Land Records department of the Government and districtwise compilations of various land-uses are published every year by the Director of Land Records. In Table 2A·1 of Part II of the Handbook land utilisation pattern in the district is picturised for the ten years. Unfortunately tahsilwise figures were not available for any year except the year 1959–60. Hence the following inset table epitomises the land-use picture of the district by the recognised classes upto the tahsil level for the year 1959–60.

TABLE

*Land Utilisation Statement in each tahsil of Ratlam district 1959–60*

| District/Tahsil | Total Area | Forest | Not available for cultivation | | | Other uncultivated land excluding fallow land | | | |
|---|---|---|---|---|---|---|---|---|---|
| | | | Land put to non-agricultural uses | Barren & Unculturable land | Total | Permanent pastures & other grazing lands | Land under misc. tree crops and groves not included in net area sown | Culturable waste | Total |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Ratlam District | 100 | 5·06 | 4·55 | 7·99 | 12·54 | 24·71 | 0·02 | 8·16 | 32·89 |
| 1 Jaora Tahsil | 100 | ... | 4·37 | 4·67 | 9·04 | 28·12 | 0·04 | 3·78 | 31·94 |
| 2 Alot Tahsil | 100 | 0·22 | 4·12 | 0·55 | 4·67 | 31·10 | 0·01 | 6·75 | 37·86 |
| 3 Sailana Tahsil | 100 | 19·37 | 5·35 | 12·83 | 18·18 | 12·38 | Neg. | 19·94 | 32·32 |
| 4 Ratlam Tahsil | 100 | 0·46 | 4·32 | 12·20 | 16·52 | 27·14 | 0·01 | 3·70 | 30·85 |

TABLE—*Concld.*

| District/Tahsil | Fallow Land: Fallow land other than current fallows | Fallow Land: Current fallows | Fallow Land: Total | Net Area sown | Total cropped area | Area sown more than once |
|---|---|---|---|---|---|---|
| 1 | 11 | 12 | 13 | 14 | 15 | 16 |
| Ratlam District | 0·65 | 0·98 | 1·63 | 47·88 | 53·49 | 5·61 |
| 1 Jaora Tahsil | 0·22 | 0·38 | 0·60 | 58·42 | 67·54 | 9·12 |
| 2 Alot Tahsil | 0·54 | 0·69 | 1·23 | 56·02 | 61·28 | 5·26 |
| 3 Sailana Tahsil | 1·48 | 2·05 | 3·53 | 26·59 | 29·23 | 2·64 |
| 4 Ratlam Tahsil | 0·42 | 0·80 | 1·22 | 50·95 | 55·94 | 4·99 |

**Forests**

There is not much forest in Ratlam district. The proportion of area under forests is reported to be nil in Jaora tahsil, and less than 1 % in Ratlam and Alot tahsils. But the deficiency is more than made up by Sailana tahsil alone which reportedly had almost one-fifth of its total area under forests in 1959-60. The district as a whole has only one-twentieth of its area covered by forests which compares with a much higher proportion 31·7 % in case of the State as a whole.

About one-eighth (9·8 % in case of the State as a whole) of the land surface of this district was categorised as 'area not available for cultivation' in the year 1959-60 This wider classification breaks up into (4·6 %) area put to non-agricultural uses like house-sites, roads etc. and (8·0 %) of area declared as 'barren and unculturable' land. The first type of this area does not show significant tahsilwise variation, the total range of variation, being very narrow: minimum of 4·1 % in Alot tahsil and maximum of 5·4 % in Sailana tahsil. But land recorded as barren and unculturable shows considerable tahsilwise fluctuation. It has a low percentage of 0·6 under it in Alot tahsil at one exterme, and a high percentage of 12·8 in Sailana, and almost equally high (12·2) in Ratlam tahsil. In Jaora too, proportion of barren and unculturable land is on the low side. The reasons for these variations are perhaps to be found in the topographical peculiarity of the tahsils concerned.

About a quarter of the district's area is shown as covered with permanent pastures and other grazing lands. This compares with a much smaller proportion 8·0 % in the case of the State as a whole in the same year. Curiously enough the most highly forested Sailana tahsil has, among tahsils, the lowest (less than one-seventh) percentage of pastures and grazing lands. Alot tahsil has almost one-third of its area classified as pastures and grazing lands, and this is the highest for any tahsil. Jaora and Ratlam are more like Alot in this respect, each having between one-fourth and three-tenth of their land areas under pastures and grass lands. All these three tahsils which show high proportions of area under pastures and grazing lands have correspondingly low proportions of areas under 'culturable waste lands'; while Sailana tahsil which has a very low proportion of area under pastures or grazing lands has almost one-fifth of its area returned as 'cultivable waste land'. Apparently there is some sort of confusion in clasification between these two classes, which can, for all practical purposes, be considered together. Such combined picture exhibits much greater comparability between the tahsils. Doing this, we find that almost one-third of the land-area in the district and in the tahsils is either cultivable waste or pasture land. It is a matter of investigation how much of this area could be diverted for agricultural purposes. At the same time, there is need for a more detailed survey of the vast area according to soil-type.

Happily, there is not much area recorded as fallow-current or old-in the district. Such area is as small as 1·6 % in the district, and even smaller in three tahsils. Sailana tahsil has however 3·5 % of its area under *fallow* lands, and this is the highest among tahsils. But even Sailana has a smaller proportion than the State as a whole which had 5·5 % of its area returned as current and old follows in 1959-60. The figures show that there is not much wastage of land in the district in the form of leaving it fallow.

The most important among all types of land-use is the area recorded as net sown area and area sown more than once. This area determines the dispersal of population density in the district. In the district, almost half (48 %) of the district's total area is returned under 'net area sown' in 1959-60. The corrsponding State proportion is much lower 36·5 %. The net sown area is more than half of the total area in each of the three tahsils Ratlam, Jaora and Alot. In Jaora it is as high as 58%. On the other hand, net area sown is as low as 27% in the highly forested and otherwise barren Sailana tahsil.

**Soils** :

The eastern portion, constituting part of Malwa plateau proper, has good soils of the black cotton type. In the west, covering the whole Sailana tahsil, the land is cut up by numerous hills of the Vindhyan branch and is less fertile.

**Cropping Pattern :**

Table 2A·2 in part II of the Handbook gives the cropping pattern in the district for the ten years 1951 to 1960. It irrefutably brings out the *Kharif* or wet-type nature of crops in the district, the two main *Kharif* crops being *Jowar*, a food crop and cotton a fibre crop. *Rabi* crops also occupy a respectable acreage, the total under two main crops wheat and gram, both food grains being almost three-tenth of the total cropped area. Among other important crops in the district mention may be made of maize, groundnut and *bajra*.

**Tahsilwise cropping pattern :**

Tahsilwise figures of cropped area were not available in any year of the decade except the year 1960–61. Accordingly in the table given below, proportions of area under important crops are presented for the year 1960–61, treating the net sown area as 100.

TABLE

*Area sown under major crops 1960–61*

| District/Tahsil | Net Area sown | Rice | Jowar | Bajra | Maize | Wheat | Total cereals & Millets | Gram | Total pulses |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Ratlam District | 100 | 2·49 | 24·84 | 2.57 | 9·16 | 18·49 | 58·84 | 10·73 | 15·78 |
| 1 Jaora Tahsil | 100 | 0·38 | 30·53 | 1·99 | 5·14 | 20·01 | 58·16 | 10·58 | 11·18 |
| 2 Alot Tahsil | 100 | 0·16 | 38·45 | 8·27 | 5·50 | 12·64 | 65·22 | 6·76 | 10·48 |
| 3 Sailana Tahsil | 100 | 11·83 | 5·07 | ... | 30·64 | 5·14 | 61·02 | 5·93 | 8·11 |
| 4 Ratlam Tahsil | 100 | 2·23 | 17·19 | 0·06 | 6·32 | 27·70 | 53·64 | 16·30 | 23·02 |

TABLE—*Concld.*

| District/Tahsil | Total food grains | Total Condiment & Spices | Total food crops | Ground nut | Total oil seeds | Cotton | Total non-food crops | Area sown more than once |
|---|---|---|---|---|---|---|---|---|
| 1 | 11 | 12 | 13 | 14 | 15 | 16 | 17 | 18 |
| Ratlam District | 74·62 | 2·76 | 78·91 | 4·88 | 7·21 | 18·16 | 27·67 | 6·58 |
| 1 Jaora Tahsil | 74·41 | 4·75 | 81·84 | 6·20 | 8·00 | 15·12 | 26·53 | 8·37 |
| 2 Alot Tahsil | 75·70 | 1·86 | 78·47 | 2·25 | 4·06 | 22·08 | 28·11 | 6·58 |
| 3 Sailana Tahsil | 69·14 | 0·38 | 69·78 | 4·22 | 9·43 | 21·56 | 32·82 | 2·60 |
| 4 Ratlam Tahsil | 76·66 | 2·29 | 80·24 | 5·71 | 7·67 | 17·01 | 26·19 | 6·42 |

As is natural, food crops occupy the highest proportion almost four-fifth of the net cultivated area in 1960–61. Food crops have a significantly lower proportion of area under them in the comparatively more forested Sailana tahsil.

In other tahsils, range of variation of area under food-crops is narrow. Most of the area under food-crops is under food-grains. The following table gives rank of each of the six major crops in the district and in each tahsil according to the acreage under each.

TABLE

*Crops with Rank 1960-61*

| District/Tahsil | Jowar | Wheat | Cotton | Gram | Maize | Groundnut | Bajra | Rice |
|---|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| Ratlam District | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 |
| Jaora Tahsil | 1 | 2 | 3 | 4 | 6 | 5 | 7 | 8 |
| Alot Tahsil | 1 | 3 | 2 | 5 | 6 | 7 | 4 | 8 |
| Sailana Tahsil | 6 | 5 | 2 | 4 | 1 | 7 | .. | 3 |
| Ratlam Tahsil | 2 | 1 | 3 | 4 | 5 | 6 | 8 | 7 |

The table shows that Jowar, is the main crop in the district as a whole and in Jaora and Alot tahsils. In Ratlam tahsil Jowar recedes to second position, while in Sailana it not only ceases to be a major crop but sinks to the sixth place. Almost a quarter of the net sown area of the district in 1960-61 was under jowar; being as high as (almost) two-fifth in Alot tahsil and high (three-tenth) in Jaora tahsil. In Ratlam, jowar occupies between one-fifth and one-sixth of the net sown area.

The cereal wheat is the main crop of Ratlam tahsil, where it occupies between one-fourth and three-tenth of the net sown area.

In Jaora tahsil also wheat is an important crop, next only to jowar, occupying about a fifth of the tahsil's net sown area. Wheat has about one-eigth of the net sown area under it in Alot tahsil and ceases to be an important crop in Sailana tahsil.

The fibre cotton is the third most important crop in the district, being almost as extensively cropped as wheat. It has between one-sixth and one-fifth of the net sown area under it in the district as a whole. Whereas other crops do not do so, cotton shows a steadily high acreage in each tahsil, the proportionate variation being between 15·1% in Jaora and 22·1 % in Alot tahsils. In Alot and Sailana tahsils cotton is the second most important crop while in the other two tahsils it sinks to the third position.

Among pulses which account for about one-sixth of the net sown area, gram is the most important. This crop occupied, in 1960-61 more than one-tenth but less than one-ninth of the net sown area of the district. The acreage under gram is as high as one-sixth of net sown area in Ratlam tahsil, where it closely compares with areas undr jowar and cotton. The area under gram is much lower than the district average in Alot and Sailana tahsils.

Maize is the fifth most extensively grown crop in the district. The high district proportion is, however, due to the very high proportion—31 % —under maize in Sailana tahsil, where it is the first crop. In the remaining tahsils maize occupies from 5 to 6 percent of the net area sown under all crops.

Rice is not an important crop in the district as well as in the tahsils, except Sailana tahsil where it is the third most widely grown crop.

Groundnut is the main oilseed grown in the district, though the area under it is not even one-twentieth of the net area sown.

**Economy** :

**Workers and non-workers** :

The following table gives participation rates (i.e. proportion of workers to total population) separately for the district and the tahsils, as also for total, rural and urban areas. Corresponding figures for the State as a whole are also juxtaposed for highlighting differences, if any.

TABLE

| Territorial Unit | Total Rural Urban | Percentage of workers to total population | | |
|---|---|---|---|---|
| | | Persons | Males | Females |
| 1 | 2 | 3 | 4 | 5 |
| Ratlam District | T | 48·2 | 57·5 | 38·4 |
| | R | 54·6 | 60·1 | 48·8 |
| | U | 32·3 | 51·2 | 11·3 |
| 1 Jaora Tahsil | T | 50·1 | 58·4 | 41·4 |
| | R | 54·5 | 60·1 | 48·6 |
| | U | 34·6 | 52·3 | 15·1 |
| 2 Alot Tahsil | T | 53·2 | 62·9 | 43·1 |
| | R | 56·2 | 64·7 | 47·2 |
| | U | 38·7 | 53·9 | 22·7 |
| 3 Sailana Tahsil | T | 48·8 | 54·5 | 42·9 |
| | R | 50·0 | 55·0 | 44·9 |
| | U | 34·1 | 47·8 | 19·5 |
| 4 Ratlam Tahsil | T | 44·3 | 55·6 | 32·0 |
| | R | 56·7 | 60·3 | 53·1 |
| | U | 30·4 | 50·6 | 7·5 |
| Madhya Pradesh State | T | 52·3 | 60·2 | 44·0 |
| | R | 55·2 | 61·6 | 48·6 |
| | U | 34·9 | 52·4 | 14·5 |

A little less than half(48·2%)of the district's population is economically active, having been classified as workers (for elucidation of the concept of 'work' in 1961 Census, please refer to page iii of the Notes and Explanations in the Handbook). This compares with a conspicuously higher-52·3%-rate of participation in case of the State as a whole.

The difference arises mainly from the much higher urban component in the district's population (almost twice as large as the State component) than in that of the State as a whole. This inference stems from the closely comparing participation ratios in case of rural populations of the State and the district, in case of persons, males and females each to each. In areas of low productivity, participation rate alone is never a reliable index of economic well-being of the population. On the other hand, a higher participation rate is, more often than not, an index of economic backwardness. This follows from the observed low rate of participation in urban areas, where participation is diversified over the various sectors of economy which is consequently better developed. On the other hand, the higher participation rate in rural population results from concentration of economic effort in agriculture only. The reason why we may not take the crude participation rate as an index of economic development is its lacking in two other necessary dimensions : the time of participation and the productivity per participant. This latter, as is well-known, is a function of the skill and training that the worker has received, so that a skilled and trained worker is easily the equal of two or more unskilled, untrained or ill-trained workers. Nonetheless, a high rate of participation denotes the readiness of the population to take part in economic effort and this by itself is quite significant.

As among tahsils, the lowest participation rate in Ratlam tahsil is easily explained by its very high proportion of urban population. What is intriguing, however, is the low participation in the tribal and least urbanised Sailana tahsil; in fact, the rural population of this tahsil has the lowest participation rate in the district. This low participation in Sailana tahsil seems to result from a lower male participation as well as a lower female participation in the rural areas. Rural Alot tahsil, exhibits the highest male participation in the district, whereas in case of female participation the distinction of having the highest participation goes to rural Ratlam tahsil. The lower participation in the district seems to be due to the lower female participation in categories V, VI, VII, VIII and IX, each of which has greater proportion of workers in it in the district than in the State as a whole. It is not possible to offer any explanation for the low participation (both male as well as female) in Sailana tahsil.

This may fruitfully be investigated by more interested and competent persons during the intercensal period.

**Economic Classification of workers :**

The table inset below presents economic classification of 100 workers in Ratlam district and its tahsils by the nine categories of workers. Corresponding figures for the State as a whole are also given for analytical purpose s.

TABLE

*100 workers classified by working category*

| Unit | Percentage of workers in | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|
| | I | II | III | IV | V | VI | VII | VIII | IX |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| Ratlam District | 64·2 | 10·0 | 1·6 | 4·8 | 4·0 | 1·3 | 4·0 | 2·7 | 7·4 |
| 1 Jaora Tahsil | 64·6 | 13·1 | 1·0 | 6·1 | 2·9 | 1·3 | 3·7 | 0·6 | 6·7 |
| 2 Alot Tahsil | 72·6 | 9·8 | 2·4 | 4·7 | 1·4 | 0·6 | 2·5 | 0·5 | 5·5 |
| 3 Sailana Tahsil | 87·1 | 2·7 | 0·9 | 2·5 | 0·4 | 0·7 | 1·7 | 0·3 | 3·7 |
| 4 Ratlam Tahsil | 49·5 | 10·4 | 1·9 | 4·7 | 7·8 | 2·0 | 6·1 | 6·9 | 10·7 |
| Madhya Pradesh State | 62·7 | 16·6 | 2·9 | 5·0 | 2·0 | 1·0 | 2·4 | 0·9 | 6·5 |

The table clearly brings out the slightly greater diversification of economic effort in the district, as may be seen from the smaller participation in agriculture and higher participation in categories V, VI, VII, VIII and IX than in the state. This is a desirable trait of economy in the district and partly explains its lower participation rate.

The foregoing table shows that almost three-fourth (74·2%) of the district's working population is principally dependent on agriculture i. e. the first two working categories comparing with a higher proportion-79·3% in case of the State as a whole which is so dependent. In the much more rural and tribal Sailana tahsil dependence on agriculture is to the extent of almost nine-tenth (89·8%) of the working force. Alot tahsil which is next to Sailana in the size of its rural population

is also next in the district in respect of size of working force in agriculture. The two comparatively much more urbanised tahsils—Ratlam and Jaora—have smaller proportion of workers in agriculture. We have thus further evidence of the fact that concentration of working force in the agricultural working categories and consequent absence of diversification of economic effort over other sectors of economy indicates economic backwardness and low levels of urbanisation and industrialisation.

A little less than two-third of the district's working population is returned as cultivators by which term is meant a person who cultivates on his own account, whether on owned (including family holding) or unowned land, as against a person who works on land for others in lieu of wages (in cash or kind). The latter type of worker is known as agricultural labourer. The proportion of cultivators in the working population is very high (87·1%) in Sailana tahsil and high (72·6%) in Alot tahsil. It is lower, almost two-third of the working force in Jaora tahsil, while in the highly urbanised Ratlam tahsil, cultivators fail to make even half of the working force. It may also be noted that proportion of cultivators in the district is slightly higher than the corresponding State proportion.

**Household Cultivation :**

For many purposes economy can be studied better in some of its aspects by treating the household itself as a unit rather than the individual. House-hold agriculture and household industry are two such aspects, in which, particularly in the rural areas, the entire household is engaged as a unit and individual members, if any, of the household working outside do so more with a view to augment the income accruing to the household from household activity. Tables B--X to B-XVII of the Handbook deal with households engaged in household agriculture or industry, treating the household itself as a unit.

These tables are prepared from a randomly selected (in the sense of a random start number) 20% sample of all households that were enumerated at the Census and in respect of each of which a separate schedule was filled. Since the sample is radom and may undoubtedly be regarded as a large sample, the results derivable therefrom may, without much error, be projected to the entire universe of households in the district.

Table B-X gives a basic distribution of the sample households by the two principal household economic activities, namely household cultivation and household industry. It shows that 37·7% or between one-third and two-fifth i.e. (only one-sixth in rural areas) of all households were engaged neither in household cultivation nor in household industry. 53·4% of the households in all areas and 73·6% in rural areas are engaged only in household cultivation (the word only connotes the exclusion of household industry, though not, by individual members of the household, of any other economic activity), while 3·7% in all areas and 3·1% in rural areas engage in only household industry.

Roughly one-twentieth (5·2%) in all areas and one-fourteenth (7·2%) in rural areas, however, belong to the overlapping class of households that are engaged both in household cultivation and household industry. Dependence on agriculture, with or without household industry is thus 58·6 % in *all* areas and 80·8% in rural areas in the district. These proportions indicate the totality of households engaged in household cultivation. Similarly, 8·9% households in all areas and 10·3% in rural areas are engaged in household industry with or without household cultivation.

Table B-XI of the Handbook gives us data on two important aspects of cultivation, namely prevalence of sub-tenures or absentee-landlordism and fragmentation of holdings in the sense of smallness of the total area cultivated by each household. As regards the first aspect, the statistical evidence before us shows that 80·5% or more than four-fifth of the cultivating rural households own, or directly hold from Government, their entire holdings. At the opposite extreme are a small number of rural cultivating households together adding up to 5·1% who do not own the entire holdings cultivated by them but have taken them from private persons or individuals on sub-lease. Between these two types, stand about one-seventh (14·4%) of the rural cultivating households who cultivate holdings only partly belonging to them and partly taken from others on sub-lease. These two latter types of cultivating households indicate the extent of persistence of sub-tenures inspite of land reform measures taken by the State.

Fragmentation of holdings in the sense both of smallness of holdings and the geographical discontinuity of the plots cultivated by the same household is a bane of our cultivation and a drag on the human, livestock and other resources. This is so because existence of submarginal holdings, frequently not in one continuous stretch but scattered apart in separate tiny plots leads to the wastage of human and cattle power and thereby impedes production. This aspect of cultivation, in the sense indicated above, is studied in the table inset hereunder for rural cultivating households (cultivation is notof much importance in the economy of urban areas). It gives (i) distribution of rural cultivating households by size of holding cultivated and (ii) cumulative proportion of households that cultivate holdings smaller than certain specified sizes.

TABLE

| Size of holding (in acres) | Percentage of rural sample households cultivating holding of size given in column 1 | Percentage of house holds cultivating holdings smaller than that indicated by the upper limit in column 1 |
|---|---|---|
| 1 | 2 | 3 |
| Below 1 acre | 2·2 | ... |
| 1 – 2·5 | 8·9 | 11·1 |
| 2·5– 5·0 | 16·5 | 27·6 |
| 5·0– 7·5 | 17·4 | 45 0 |
| 7·5–10·0 | 12·2 | 57·2 |
| 10·0–12·5 | 11·0 | 68·2 |
| 12·5–15·0 | 7·4 | 75·6 |
| 15·0–30·0 | 19·8 | 95·4 |
| 30·0–50·0 | 3·5 | 98·9 |
| 50+ | 1·1 | 100·0 |

The table shows that a small proportion (2·2%)of the cultivating rural sample household own next to nothing in the name of land, the size of holding cultivated by every one of them being less than one acre. Almost one-eleventh of the cultivating households fare no better; holding tiny holdings between 1 and 2·5 acres each. Scarcely better is the lot of about one-sixth of the cultivating rural households who hold more than 2·5 but less than 5 acres of land. Amalgamating these three bottom class ranges, we are face to face with the sordid fact that a little more than one-fourth of the cultivating rural households cultivate small holdings of less than 5 acres each which cannot perhaps yield even subsistence living to the cultivating households. Again a little more than one-sixth of the rural cultivating households hold between 5 and 7·5 acres of land each, a size which may or may not be economic depending on such factors as fertility of the soil, size of cultivating household, irrigation facilities available etc. Hence it would appear that between two-fifth and half of the cultivating households hold more or less uneconomic holdings. About three-tenth of the cultivating rural households cultivate holdings of between 7·5 to 15 acres each. About one-fifth (this is the highest frequency for any particular size-group) of the cultivating households cultivate fairly big holdings of between 15 and 30 acres, and these households may be expected to be reasonably well-off economically. A small fraction (4·6%) of the cultivating households holds more than 30 acres af land each. These are definitely on a secure footing economically and represent the section of households in whose hands the land wealth of the district is concentrated.

Average size per cultivating household in the district comes to 6·49 acres.*

**Category III—Mining, Quarrying etc.**

Economic activities included in this category cover a wide range of activities involving extraction of wealth provided by nature without subjecting it to any basical change. Thus forestry, fishing, hunting, livestock, mining and quarrying, gardening etc. are some of the activities covered in category III. The proportion of workers in category III in the district is considerably smaller than the proportion in the State as a whole. The proportion is particularly very small in Sailana and Jaora tahsils, but has a higher value (2·4%) in Alot tahsil. Even in tne latter, however, it fails to catch up with the State average proportion (2·9%).

Out of a total of 3,685 workers (3'071 males and 614 females) principally engaged in category III economic activities, 3,557, constituting 96·5% of all workers in the category are in division '0' i. e. "Agriculture, livestock, forestry, fishing and hunting". One minor group of economic activities alone i. e. '040' covering the production and rearing of livestock such as buffalo, cow and goat for milk and animal power alone constitutes more than seven-tenth (71 5%) of the working force of category III.

Forestry and logging (major group '02') is the next biggest employer in category III, absorbing 11% of the categorie's workers (mainly in felling and cutting of trees and conservation of forests); while plantation crops account for more than 8% of the working force in the category.

**Category IV–Household Industry**

Economic activities coming in category IV rank next to agriculture and 'other services' in the district as regards level of employment. Size of participation in household industry in the district almost compares (actually it is slightly smaller) with the participation level in the State as a whole. Among tahsils, Jaora tahsil shows the highest proportion of workers at household industry, while the proportion in the category is also high in Ratlam and Alot tahsils. In the tribal Sailana tahsil, however, household industry gives principal employment to the smallest (2·5%) proportion of workers in the district.

By far the most important household industry is 'Livestock rearing for milk and animal power' (minor group 040) employing 11·6% of the workers in category IV. The chief contributors to this minor group are graziers tending the village cattle.

Next numerous in household industry are workers, belonging traditionally to Chamar castes, in minor group 311 (manufacture of shoes and other leather foot-wear), accounting for 10·9% of the category's working force. Almost equally numerous (constituting 10·4% of all workers in category IV) are persons working principally as manufacturers of material from bamboo, cane, leaves and other allied products. (minor group 288). Persons in this minor group come from the Bargunda or Mang castes who traditionally monopolise *Khajoor* leaf industry and the 'Bansphors' (a name, literally meaning splitters of bamboo) who similarly monpolise the industry of making articles from split bamboo. A peculiarity of this industry is the bigger female than male participation in it. Tailoring industry accounts for the principal work of 9% of the workers at household industry. This is followed by workers principally engaged in the making of earthenware and earthen pottery, a traditional industry pursued by members of the Kumhar caste. Other important household industries are carpentary, traditionally followed by the *barhai* or *sutar* caste, blacksmithy traditional industry of the *luhar* caste, tanning and finishing, of hides and skins traditional industry of the Chamar group of castes; brick-making another traditional industry of the Kumhar caste and goldsmithy a traditional industry of the *sunar* caste. The following table lists the first few important household industries in the district, ranked in the order of numerousness of workers in each. Appropriate remarks as to caste association or size of female participation are also given wherever necessary.

* Based on figures for the year 1960-61. Computation is made by dividing the sum of net area sown and areas under current and old fallows by the total sample cultivating households multiplied by five.

TABLE

| S. No. Rank | Minor-group of industry | Description | Proportion (%) to total workers in category IV | Remarks as to caste association |
|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 |
| 1 | 040 | Production and rearing of livestock (large heads only) mainly for milk and animal power | 11·64 | Ahir or Gujar Caste |
| 2 | 311 | Manufacture of shoes and other leather products | 10·87 | Chamar caste |
| 3 | 288 | Manufacture of materials from cork, bamboo, leaves, cane and allied products | 10·36 | Bansphor, Barg-unda and Mang caste |
| 4 | 273 | Making of textile garments | 9·03 | Darji caste |
| 5 | 350 | Manufacture of earthenware & earthen pottery | 7·72 | Kumhar caste |
| 6 | 282 | Manufacture of structural wooden goods (including treated timber) such as beams, doors, posts, windows | 6·92 | Barhai or Sutar caste |
| 7 | 369 | Manufacture of sundry hardware products such as G. I. Pipe, wire, nut, bolt, screw, bucket, cutlery etc. | 5·91 | Luhar caste |
| 8 | 310 | Currying, tanning and finishing of hides and skins and preparation of finished leather | 4·38 | Chamar group of castes |
| 9 | 340 | Manufacture of structural clay products such as bricks, tiles, etc. | 4·17 | Kumhar caste |
| 10 | 393 | Manufacture of jewellery, silver ware and wares using gold and other precious metals | 3·32 | Sunar caste |
| 11 | 399 | Manufacture and repair of goods not assignable to any other group | 3·05 | |
| 12 | 207 | Production of edible fats and oils (other than hydrogenated oil) | 1·77 | Teli caste |
| 13 | 041 | Rearing of sheep and production of wool | 1·73 | |
| 14 | 233 | Cotton dyeing, bleaching | 1·58 | |
| 15 | 200 | Production of rice, atta, flour etc. by milling, dehusking and processing of crops and food-grains | 1·48 | |
| 16 | 209 | Production of other food products such as sweet-meat, condiments, *muri*, *murki*, *chura*, *khoa*, etc. | 1·38 | |
| 17 | 231 | Cotton spinning (other than in mills) | 1·37 | |
| 18 | 235 | Cotton-weaving in handlooms | 1·33 | |

The table brings out that most of the household industries are traditionally caste-based.

**Category V : Manufacturing other than household Industry :**

This category gives principal employment to 9,253 workers, who account for roughly 1 in 25 of all workers. As is to be expected, 8,532 or more than nine-tenth of the workers are concentrated in urban areas mostly of Ratlam and Jaora tahsils. In Ratlam tahsil, participation in category V is as high as 7·8% of tahsil's working force, and that is the highest proportion for any tahsil in the district. Next as regards size of workers in category V is Jaora tahsil, but the proportion for it is less than half the proportion for Ratlam tahsil. Sailana has a very low level of participation in category V, having only 1 in 250 of its workers in it. Figures thus amply bring out the backwardness of Sailana and Alot tahsils in respect of large scale manufacturing industries.

According to the "List of Industrial Establishments in Madhya Pradesh, 1960" (corrected upto 31·12·60) compiled by Chief Inspector of Factories, Madhya Pradesh, the district had fifty-three registerd factories at the end of the year 1960. Of these 18 were cotton ginniug and 5 cotton pressing factories, one textile mill, 2 dal mills, 1 sugar and 1 gur factory, 4 oil mills,

1 cloth mill, 1 hosiery factory, 1 straw-board mill, 1 printing press, 1 bone and fertilizers factory, 2 petroleum depots, 1 stone dressing factory, 1 pottery factory, 3 trunks factories, 1 ice factory, 1 electric supply factory, 5 biri factories and 2 umbrella factories. Of these Ratlam had as many as 26, including the cloth mill, the straw boards factory, 2 cotton ginning and 2 pressing factories, 2 dal mills, 1 gur factory, 2 oil mills, 1 hosiery factory, 1 printing press, 1 bone and fertilisers factory, 1 Stone dressing factory, 2 petroleum depots, 1 pottery factory, 3 trunk factories, 1 ice factory, 1 electric power house, 1 biri factory and 2 umbrella factories. Jaora town had 12 registered factories including the only sugar mill in the district, 4 ginning and 2 pressing factories, 1 oil mill and 4 biri factories. Other places in the district which had the remaining registered factories were Dhodar, Piploda, Ringod, Kharwa, Sailana, Sukheda and Badawada.

The table given hereafter lists some of the important manufacturing industries in the district, ranked according to number of workers in each.

| S. No. | Major & Minor group of industry | Description | Proportion to all workers in Category V | Rank |
|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 |
| 1 | 20 | Food stuffs | 16·6 | ... |
| 2 | 200 | Production of rice, atta, flour, etc. by milling, dehusking and processing of crops and food-grains | 2·4 | 13 |
| 3 | 201 | Production of sugar and syrup from sugar cane in mills | 6·9 | 3 |
| 4 | 207 | Production of edible oils and fats (other than hydrogenated oil) | 2·6 | 11 |
| 5 | 209 | Production of other food-products such as sweet-meats, condiments etc. | 3·5 | 6 |
| 6 | 21 | Beverages | 0·4 | ... |
| 7 | 22 | Tobacco-products | 4·0 | ... |
| 8 | 220 | Biri-making | 3·9 | 5 |
| 9 | 23 | Textile-cotton | 29·3 | ... |
| 10 | 232 | Cotton-spinning & weaving in mills | 26·9 | 1 |
| 11 | 273 | Making of textile garments including rain-coats and headgear | 7·6 | 2 |
| 12 | 28 | Manufacture of wood and wooden products | 4·5 | ... |
| 13 | 282 | Manufacture of structural wooden goods | 3·3 | 8 |
| 14 | 29 | Paper and paper products | 5·9 | ... |
| 15 | 290 | Manufacture of pulp from wood, rags, waste paper and other fibres and conversion of such pulp into any kind of paper | 5·3 | 4 |
| 16 | 30 | Printing or publishing | 0·9 | ... |
| 17 | 31 | Leather and leather products | 2·8 | ... |
| 18 | 311 | Manufacture of shoes and other leather foot-wear | 1·7 | 15 |
| 19 | 32 | Rubber, petroleum and coal products | 0·1 | ... |
| 20 | 33 | Chemicals and chemical products | 0·6 | ... |
| 21 | 34-35 | Non-metallic mineral products other than petroleum and coal | 7·0 | ... |
| 22 | 340 | Manufacture of structural clay products such as bricks, tiles etc. | 3·0 | 10 |
| 23 | 351 | Manufacture of Chinaware and crockery | 1·4 | 16 |
| 24 | 36 | Basic metals and their products except machinery and transport equipment | 7·5 | ... |
| 25 | 365 | Manufacture of brass and bell metal products | 2·5 | 12 |
| 26 | 369 | Manufacture of sundry hardwares such as G. I. pipe, wire, nut, bolt screw, bucket, cutlery | 3·0 | 9 |
| 27 | 37 | Machinery (all kinds other than transport) and electric equipment | 1·2 | ... |
| 28 | 38 | Transport equipment | 2·7 | ... |
| 29 | 388 | Repairing of bicycles and tricycles | 2·2 | 14 |
| 30 | 39 | Miscellaneous manufacturing industries | 7·7 | ... |
| 31 | 393 | Manufacturing of jewellery, silverware and wares using gold and other precious metals | 3·3 | 7 |

The table shows that more than one-fourth of the workers in category V are employed in 'cotton spinning and weaving in mills', mainly in the cloth mill at Ratlam. Next biggest number of workers is in the making of textile garments, who properly speaking cannot claim to belong to any sizeable manufacturing establishment but have sneaked into category V because of the location criterion. Proportion of workers in the manufacture of sugar, presumably at the sugar factory in Jaora ranks third, while the fourth place according to participation size is of workers in minor group '290', presumably belonging to the straw boards factory at Ratlam.

**Category VI—Construction :**

Level of employment in 'construction' activities in the district is slightly higher than the State level, but is very low compared with other categories. In fact, construction accounts for the lowest proportion of the working force among all the categories. Comparatively speaking, Ratlam tahsil has a much higher proportion of workers in the category, while in Alot and Sailana tahsils the proportion is very much small. More than three-fifth (62·9%) of the workers in category are in minor group '400' i. e. in the 'construction and maintenance of building', while one-third (33·3%) are in construction and maintenance of roads. A very small proportion (3·8%) of the category's working force is in construction and maintenance of water-ways, bunds, dam etc.

**Category VII—Trade and Commerce :**

Judging from the proportion of workers alone, category VII ranks fourth in the economy of the district, employing slightly greater number of workers than employed in category V. Out of the 9,319 (8,847 m ales and 472 females) returned in trade and commerce in the district, more than three-fourth (77·4%) were counte d in urban areas of the district; showing the low level of trading and commercial activity in rural areas. This fact i. e. concentration of workers in trade and commerce in urban areas explains the higher proportion of workers in category VII in Ratlam and Jaora tahsils and the very low proportion in Sailana tahsil.

8·7% of the workers in trade and commerce are returned in 'whole-sale' trade themselves concentrated to the extent of seven-tenth (70·1%) in wholesale trade in cereals and pulses (minor group 600).

Wholesale trade in textile products (minor group 602) and in edibles other than cereals and pulses (minor group 601) account respectively for 7% and 4% of the workers in wholesale trade.

About nine-tenth (87·1%) of the workers in trade and commerce have been returned in retail trade. This concentration of workers in the category in the retail trade conforms to the expected pattern, because retail traders have to cater to the day-to-day need of the consumers and grow in response to the latters' need. This fact also governs the numerousness of various types of retail trade workers, with those workers being most preponderant who answer to the most pressing needs of the community and others follow in that order. Accordingly, we find more than two-fifth (42%) of the retail trade workers in minor group '640' (retail trading in cereals, pulses vegetable, sugar, fruits, spices, oil, fish etc.) followed by workers in '650' (retail trading in fibres, yarns, dhoti, sari and other textile and hosiery products) which accounts for 12% and minor group '646' (retail trading in foodstuffs like sweetmeats, condiments, cakes, biscuits etc.) accounting for 11% of the workers in retail trade.

These are followed in numerousness of workers by minor groups '644' (retail trading in tobacco, bidi, cigarettes etc.), '647' (retail trading in animals), '689' (retail trading in precious stones and jewellery), '645' (retail trading in fuel such as coke, coal, firewood etc.), '642' (retail trading in intoxicants such as wine, liquors etc.) accounting respectively for 5·3, 3·6, 2·7, 2·1 and 1·4 percent of all workers in retail trade. The remaining workers in retail trade are distributed over 25 minor groups of trade and commerce. It may be pointed out that this pattern of distribution of retail trade workers is more or less common to most other districts, and naturally so because, as stated earlier, trade has to respond to the needs of the population and the basic needs of the population do not show any significant variation from place to place.

A small proportion i. e. 4·2% of workers in trade and commerce has been returned in 'trade and commerce miscellaneous'. These are engaged mainly in banking and other similar types of financial organisations.

**Category VIII—Transport, Storage and Communications:**

The Godhra-Ratlam and Nagda-Mathura branches of the erstwhile Bombay-Baroda and Central India (now Western Railway) broad guage railway pass through the district, Ratlam and Alot being important stations on it. The Khandwa-Ajmer metre-guage line also passes, almost through the heart of the district, Ratlam and Jaora being important stations on it. Ratlam, the district headquarters town, is thus an important centre of railway transport in the district.

The district is rather poor in road communications. It has a total linear mileage of 222 miles of roads, which includes 24 miles of local body roads. State maintained roads thus measure only 198 miles, giving 105 miles per 1,000 square miles of area; as against 129 per 1,000 square miles in case of the State as a whole.

6,404 workers have been returned in category VIII from the district in the census, and these add to 2·7% of the total number of workers in the district. The district proportion in category VIII is thus three times as large as the State average proportion. In Ratlam tahsil alone, the proportion of workers in category VIII is as high as 6·9% of the tahsil's working force. In all other tahsils, the proportion is very small, being less

than 1 % in each case. The concentration of workers of category VIII in Ratlam tahsil follows from two facts, namely its containing almost half of the district's urban population and from Ratlam's being a big raiway centre.

Transport alone accounts for bulk (9·5%) of the workers in category VIII. More than three-fourth (76%) of the workers in the category are returned in railway transport (minor group 700). 9·5% of the category's working force is principally employed in road transport by means of bullock-carts, tongas, rickshaws etc. Transport by buses and by motor vehicles other than buses account respectively for 3·6 and 3·2 percent of the workers in category VIII. These proportions *prima facie* corroborate the observation as to the district's backwardness in road transport.

4·7 % of the workers in category VIII were returned from 'communications' concentrated mostly in postal and telegraphic services. Employment in storage was of negligible dimensions.

**Category IX—'Other Services':**

These are the most important groups of economic activities in what may be called the tertiary sector of industry. This latter also embraces activities falling within the ambit of categories VII (Trade and commerce) and VIII (Transport, storage and communications). From the standpoint of participation size,'other services' rank next to the agricultural working categories, accounting for roughly one-fourteenth of the district's working force. The district proportion of workers in category IX is comparable to-in fact slightly greater than-the State proportion. Since urban economies have narrower primary and wider secondary and tertiary sectors of industry, it is natural to expect the highly urbanised Ratlam tahsil to have higher participation in 'other services' than other tahslis. This is corroborated from the data available with us, which shows that Ratlam tahsil has a little more than one-tenth of its workers in category IX. Proportion of workers in category IX in other tahsils also shows more or less proportionality with the urban component of population. The least urbanised Sailana tahsil has less than 1 in 25 of its workers in 'other services'.

The distribution of workers in category IX among the minor groups of industry shows almost a common pattern in all the districts in the State, the chief contributors being 'public services', 'personal services' and 'educational and scientific' services.

Other recognised groups of industries include only a very small proportion of the workers. The following table shows the distribution of category IX-working force among the major and minor groups of industry.

| S. No. | Code No. | Description | Proportion to all workers in Category IX | Rank | Remarks |
|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 |
| 1 | 50 | Electricity and gas | 1·6 | 10 | Mostly in minor group '501' i. e. distribution of energy |
| 2 | 51 | Water supply and sanitary services | 4·7 | 7 | Mainly in minor group '511' i. e. garbage and sewage disposal |
| 3 | 80 | Public services | 18·9 | 2 | 32·9% in minor group '803', 41·4% in minor group'809' 23·9% in minor group '805'. |
| 4 | 81 | Educational and scientific services | 12·5 | 4 | 89·9% in minor group '811', rest in minor group '810'. |
| 5 | 82 | Medical and health services | 5·8 | 6 | 94·9% in minor group '820'. |
| 6 | 83 | Religious and welfare services | 3·8 | 9 | Mostly in minor group '831' and to a smaller extent in '830'. |
| 7 | 84 | Legal services | 0·7 | 11 | All in minor group '840'. |
| 8 | 86 | Community services and trade and labour associations | 0·4 | 12 | |
| 9 | 87 | Recreation services | 4·4 | 8 | 84·5% in minor group '872' |
| 10 | 88 | Personal services | 14·8 | 3 | 42·2% in minor group '880', 22·8% in minor group '884', 15·8%in minor group '883', 13·5% in minor group '882'. |
| 11 | 89 | Services not elsewhere classified | 7·5 | 5 | All in minor group '890' |
| 12 | 90 | Activities unspecified and not adequately described inculding activities of such individuals who fail to provide sufficient information about their industrial affiliation to enable them to be classified. | 24·9 | 1 | All in minor group '900'. |

It appears from the foregoing table that almost one-fourth of the workers classified in category IX did not furnish sufficient information about their industrial affiliation to facilitate their allocation to specific major and minor groups. Among those who did so, most numerous are workers in 'public service' who constitute between one-fifth and one-sixth of the workers in category IX. Of these, more than two-fifth were in Public service in administrative departments and offices of State Government, about one-third were in public service in police and a little less than one-fourth were in Public service in administrative departments and offices of quasi-government and local body organisations. Next numerous are workers in 'personal services' who constitute almost one-seventh of the category's working force. These are almost wholly made up of domestic servants including cooks, barbers and hairdressers, launderers and washermen, and servants in hotels, boarding and eating houses etc. One-eighth of the workers in 'other services' were returned in education and scientific services; constituted mostly by teachers in primary and higher secondary schools and in colleges.

Notice may be taken of 4·4% workers of category IX in major group '87' (Recreation services), more than four-fifth of whom have been returned in minor group '872'–i.e. "recreation services" rendered by organisation and individuals such as those of theatres, opera companies, ballet and dancing parties, musicians, circus etc.

**Summing Up** :

Situated on the western border of the State, greater part of Ratlam district lies in the Malwa plateau drained by the Chambal and its tributaries. The south-western Sailana tahsil is, however, almost entirely hilly and is drained into the Arabian sea. The soils of Malwa plateau are rich and fertile. The climate is temperate, typical of Malwa plateau, with an average annual rainfall of 864 mm. or 34."

Politically and administratively the district is divided into four tahsils—Ratlam, Alot, Jaora and Sailana. Distribution of area among tahsils is more or less even. Except Alot tahsil which comprises almost one-fifth of the district's area, others are closely comparable in area; with the biggest Jaora containing 27·95% and the third biggest Sailana containing 25·24% of the district's area. Population distribution, however, is lop-sided; Ratlam the most populous tahsil is almost 2½ times as thickly populated as the least populated Sailana tahsil. The population proportions are Ratlam (38·3%); Jaora (29·4%); Alot (17·3%) and Sailana (15%). The district is much more densely populated than the State as a whole, having 257 persons to a square mile comparing with State's 190 persons to a square mile. Ratlam with 361 persons to a square mile is the most densely populated tahsil while Sailana with 153 persons to a square mile is the least densely populated. Density distribution in rural areas alone shows a more even distribution, particularly in case of Jaora, Alot and Ratlam tahsils.

The district, with 28·6% of its population living in urban areas is twice as much urbanised as the State as a whole. Ratlam tahsil has almost half (47·2%) of its population in urban areas while in Sailana tahsil urban component is as small as 8%. The urban component of population has shrunk from 29·3% in 1951 to 28·6% in 1961; the shrinkage being shared by all tahsils individually except Ratlam. Causes for the shrinkage in urban proportion need investigation. The district has five towns, the most populous Ratlam having 87,472 inhabitants while the smallest Tal has a population of 5,704.

Ratlam's rural population lives in 1,038 villages. Of these the least populous Sailana alone contains more than two-fifth (42·6%) while the others contain as follows : Jaora (22·9%); Alot (18·2%) and Ratlam (16·3%). The distribution of total rural population of district according to tahsils is—Jaora (32·1%); Ratlam (28·4%); Alot (20·2%) and Sailana (19·3%.) More than half of the villages (50·1%) have less than 200 inhabitants each, the proportion being as high as four-fifth (79·4%) in Sailana tahsil but as small as one-sixth (16·6%) in Ratlam tahsil. Four-fifth of all inhabited villages in the district have less than 500 inhabitants each. Villages in Ratlam district are on an average sparsely populated (332) than the State as a whole (394).

During the 60 years i.e. 1901-61, the district has more than doubled its population. During the decade gone by the district increased its population by 26·7% (24·2% for State), the increase being of a higher order (28·1%) in rural areas and lower (23·3%) in urban areas. Ratlam tahsil has increased most (34·1%), but the hilly, tribal Sailana has also shown more or less equally high (32·8%) rate of increase. Alot and Jaora have each registered smaller and mutually comparable rates (19·7% and 19·4%) of decadal population increase. Sailana's rural population has increased by 37·3%, which is the highest rate of increase of rural population in the district during the decade.

Age distribution of population in the district conforms broadly to State pattern. Persons in the youngest age-group (0-14) make a little more than two-fifth of the population, the youth segment (15-34) includes about one-third, the middle-aged segment (35-59) comprises a little less than one-fifth of the population while persons at the upper extreme of life (60+) make only 1 in 21. According to the somewhat crude test due to Sundburg, the population is progressive. Sex-ratio in the district is 941 comparing with 953 in State as a whole. Highest value for sex-ratio is in Sailana (970); and the lowest value (924) in the highly urbanised Ratlam tahsil.

In respect of literacy and education Ratlam may be said to be among the leading in the State. It has a literacy percentage of 21·4 against a State percentage of 17·1, ranking 10th in the State. The highly urbanised Ratlam tahsil has naturally the highest (30·9%) proportion of literate and educated. For other tahsils percentages of literacy are : Jaora 20·5%; Alot 14·4% and Sailana 6·9%. Sailana is thus very backward educationally and requires much greater attention in the years to come.

Though 57 languages were returned in the district

as mother-tongues, only four are important; together accounting for all but 3·5% of the population as speakers These four with the proportion of population speaking each are : Hindi (62·0%); Malvi (20·1%) Bhili (7·8%) and Urdu (6·8%). Speakers of the Urdu mother-tongue are concentrated in urban areas.

86·4% (95·6% in rural areas) of the population follow Hindu religion. Muslims are next in numerousness constituting 9·8% (3·2% in rural areas) of the population. In urban areas Muslims comprise more than a quarter (26·4%) of the urban population. Jains with 3·1% of the population (8·5% in urban areas and 1·0% in rural areas) are also numerous in the district. Other religions contribute less than 1% to the population of the district.

Just more than a quarter (25·5%) of the district's population belongs to the 'scheduled' category, comprising the castes and tribes scheduled under the Constitution. 'Scheduled Castes' account for roughly one-seventh (13·5%) of the district's population, tahsilwise proportions varying widely being—20·3, 18·9, 10·5 and 2·6 percent respectively in Alot, Jaora, Ratlam and Sailana tahsils. The important Scheduled Castes in the district are Chamar (including sub-castes), Balai, Bagri, Nat (Kalbelia or Sapera), Bhangi and Koli (or Kori) making respectively 35·6; 31·1; 16·2. 6·5; 2·5 and 1·6 percent of the total scheduled caste population. Only 8·3% of the scheduled caste population has been returned literate and educated. Participation rate among the Scheduled Castes is 56·2% which is very high.

More than three-fourth (76·1%) of the workers are in agriculture (51·9%) in category I and 24·2% in category II). One-twelfth of the Scheduled Caste workers are in household industry and one-sixteenth in 'other services'.

Scheduled tribes constitute 12·0%of the population, living almost entirely in Sailana tahsil and consisting almost entirely of members of the Bhil and Bhilala tribes. Other tribes, though Scheduled, have negligible representation in the population of the tahsil. The Bhils usually live in dispersed habitations in huts of wattle and daub surrounded by a bamboo fence, each standing by itself on high ground. Educationally very backward, they have only 1·3% of their number literate or educated. Participation rate is 50·9%, with 98% of the workers being in agricultural sector—96%as cultivators and 2% as agricultural labourers. There is thus complete absence of diversification in the tribal economy.

47·9% of the land in the district was sown with crops in 1959-60; the proportion was the lowest (26·6%) in the hilly, sparsely populated Sailana tahsil, but in every other tahsil the proportion of net area sown with crops was more than 50% of the tahsil's total area. Double cropping is only 5·6% of the total area, tahsilwise variation being 2·6% in Sailana and 9·2% in Jaora tahsil. Forests account for less than 1% of tahsil's area in each Alot and Ratlam tahsil, while no forests were reported in Jaora tahsil. Sailana however has almost one-fifth of its area under forests. The district is a *kharif* crop area, the main *kharif* crops being Jowar, a food crop and the fibre cotton. Jowar has the highest acreage in Alot and Jaora tahsils. In Ratlam jowar is the second most important crop, the first being wheat while in Sailana tahsil *maize* is the first crop.

Participation rate in the district is 48·2%, comparing with 52·3% for the State as a whole. Economy is preponderatingly agricultural with almost three-fourth (74·2%) of the workers being in the first two categories. Proportion of agricultural labourers in the district is only 10%, comparing with a much higher State proportion of 16·6%. In the tribal Sailana tahsil, proportion of agricultural labourers is only 2·7% of the working population. The district has broader secondary and tertiary sectors than the State as a whole.

# A—GENERAL POPULATION TABLES

# TABLE A—I

## AREA, HOUSES AND POPULATION

| District/Tahsil/ Town | Total Rural Urban | Area in Sq. miles | Area in Sq. Km. | Population per Sq. mile | Number of Villages Inhabited | Number of Villages Uninhabited | Number of Towns | Number of occupied residential houses | Population Persons | Population Males | Population Females |

*Note* :—1 Under columns 3 (a) and 3 (b); (a) represents the area figures furnished by the Surveyor General of India; (b) represents the area figures furnished by the State Survey Department. The area figures of tahsils, total and rural, are based on the figures of the State Survey Department.

2 The urban area figures are collected by the Census Organisation.

3 Population per square mile has been calculated on area figures furnished by the State Survey Department.

4 (M) stands for Municipality.

# APPENDIX—I

## Statement showing 1951 Territorial Units Constituting the present set up (Only those names/areas which have undergone changes since 1951 have been shown below)

| District/ Tahsil | 1951 Territorial Units | Details of gain in Territories: Brief description | Area in Sq. miles | Area in Sq. Km. | Details of loss in Territories: Brief description | Area in Sq. miles | Area in Sq. Km. | Net Area Gain (+) Loss (−) Sq. miles | Net Area Gain (+) Loss (−) Sq. Km. |
|---|---|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 |
| **RATLAM DISTRICT** | ... | ... | ... | ... | (1) Three villages of Alot tahsil transferred to Khacharod tahsil of Ujjain District | 7·6 | 19·7 | −7·6 | −19·7 |
| Alot Tahsil | ... | ... | ... | ... | (2) Three villages transferred to Khacharod Tahsil of Ujjain District | 7·6 | 19·7 | −7·6 | −19·7 |

*Note* :—The area figures given herein are those of the State Survey Department. Names and location Code Numbers of the villages appear in the annexure to the appendix.

## ANNEXURE TO APPENDIX I

| Brief Description | Name of Village | L. C. No of 1951 Census | Revenue No. | Area in acres wherever available |
|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 |
| Three villages of Alot Tahsil transferred to Khacharod Tahsil of Ujjain District | 1 Sarkat Khedi | 9—4—170 | N. A. | 1,283 |
| | 2 Chanpa Kheda | 9—4—171 | N. A. | 1,870 |
| | 3 Chanpaner | 9—4—172 | N. A. | 1,732 |

## APPENDIX—II

**Number of villages with a population of 5,000 and over, and towns with a population under 5,000**

| | Villages with a population of 5,000 and over | | | Towns with a population under 5,000 | | |
|---|---|---|---|---|---|---|
| District/Tahsil | Number | Population | Percentage to total rural population of the district | Number | Population | Percentage to total urban population of the district |
| 1 | 2 | 3 | 4 | 5 | 6 | 7 |

*Note*—There is no village with a population of 5,000 and over and no town with a population under 5,000 in the disrict.

## APPENDIX—III

**Houseless and Institutional Population**

| District/Tahsil | Total Rural Urban | Houseless Population | | | Institutional Population | | |

# APPENDIX 1

## INDUSTRIAL ESTABLISHMENTS

*Note* :—This appendix has been prepared from information abstracted from the houselists. It is arranged first districtwise; that is, under the name of the district have been arranged the industries in ascending order of minor groups; showing the total number of establishments within brackets next to each minor group. The information has been shown by total; rural and urban separately. The figures for the tahsil follow the figures for the district as a whole. The total, rural and urban figures for each tahsil for each minor group of industry showing the number of establishments in each in brackets have been presented first. Then follows the list of the villages in the order of their location code numbers with the location code number appearing first, followed by the name of the village. Against each village is shown the minor group or minor groups of industry found in the village with number of establishments in that minor group shown within brackets against each minor group. For towns, figures have been presented separately for each ward, the number of ward being given first, followed by the industrial code numbers etc., as in the case of villages.

*The following examples will make the above Note clear :—*

Ratlam District Total 200 (220) signifies that there are 220 establishments in Ratlam District pertaining to Minor Group 200, which stands for "Production of rice, atta, flour etc. by milling, dehusking and processing of crops and foodgrains." Jaora Tahsil Total 207 (45) signifies that there are 45 establisments in Jaora Tahsil pertaining to Minor Group 207, which stands for "Production of edible fats and oils (other than hydrogenated oil)." Village 1 Kankarwa 283 (2) signifies that in Village Kankarwa which has 1 as its Location Code Number there are 2 establishments pertaining to Minor Group 283, which stands for "Manufacture of wooden industrial goods other than transport equipment such as bobbin and similar equipment and fixtures." Jaora Town, Ward No. 6 311 (3) signifies that there are 3 establishments located in Ward No. 6 of Jaora Town pertaining to Minor Group 311, which stands for "Manufacture of shoes and other Leather footwear".

### RATLAM DISTRICT

## TABLE 2A·5

## MAJOR AND MEDIUM IRRIGATION PROJECTS

RATLAM DISTRICT

| S. No. | Name of Project | Tahsil and Village | Year of commencement or when likely to start | Stage of progress | Estimate of costs involved by stages (Rs. in lakhs) | Gross area irrigated upto the latest year (in acres) | Future irrigation potential (in acres) | Area under principal commercial crops (the area affected by the project) (in acres) |
|---|---|---|---|---|---|---|---|---|
| 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
| 1 | Dhamnod Tank Project | Ratlam Dhamnod | ... | Stage I Estimate submitted | Rs. 10 Lakhs | ... | 1,180 | ... |
| 2 | Rupnia Khal Project | Jaora Ranaira | 1962–1963 | Stage I Estimate's modification as per S.E'S Technical note being done in the office | Rs. 42·5 Lakhs | ... | 2,680 | 2,680 |
| 3 | Shivgarh Bhedli Tank Project | Sailana Shivgarh | 1955 | Work Completed | Rs. 16·00 Lakhs | 150 | 1,200 | 1,196 |

*Note*—Major Projects cost more than 5 crores. Medium projects are those costing between Rs. 10 lakhs and 5 crores.
